Microsoft 365 Copilot Analytics

Dashboard & Reports Guide

Reading and using the Copilot Dashboard, Analytics Reports, and Agent Dashboard

Document Property	Value
Section	Operate
Audience	Business Leaders / Managers / Analysts
Version	4.0
Published	April 2026

How This Document Fits

This is a **Operate** guide. It covers how to *read* and *use* the Copilot Dashboard, Analytics Reports, and Agent Dashboard on a daily basis. It does **not** cover setup — see the Admin Setup Guide for configuration steps.

Section	Purpose	Who Reads
Strategy	Decide what to implement	CIO, SA, Business Leaders
Setup	Configure and deploy	IT Admin, Insights Admin
Operate (you are here)	Use dashboards and reports daily	Leaders, Analysts, Managers
Reference	Look up details and fix issues	Everyone (as needed)

7. What to Read Next

1. Copilot Dashboard Pages

The Copilot Dashboard is accessible at **insights.cloud.microsoft** and is divided into three main pages: **Readiness**, **Adoption**, and **Impact** (which includes a Sentiment section). Each page answers a different question about your organisation's Copilot deployment.

1.1 Readiness Page

The Readiness page answers: *"How many licences have we assigned, and is the count growing?"*

- **Licence assignment status** — current count of assigned vs available M365 Copilot licences.
- **Trend chart** — historical view of licence assignments over time, so you can spot stalled rollouts.

> **Feature Availability by Licence Count**
>
> Tenants with **1+ assigned Copilot licences** get the Readiness, Adoption, and Impact pages with tenant-level and group-level metrics and HR filters. Tenants with **50+ Copilot or Viva Insights licences** additionally get agent-related insights (Agent Dashboard), benchmarks, intelligent summaries, sentiment survey metrics, week/month-level trendlines, manager group-level views with delegation, and the consolidated "All" licence type view.

1.2 Adoption Page

The Adoption page answers: *"Who is using Copilot, how often, and in which apps?"*

Key Metrics

Metric	Definition
Active Copilot users	Number of licensed users who had **at least one Copilot interaction** in the 28-day measure
Copilot Actions Taken	Total count of Copilot interactions across all users. **Excludes** agent interactions — those ar
Usage Intensity	Average number of actions per active user (Actions Taken ÷ Active Users). Measures depth
Consistent Usage	Users who were active in **both** the current and the previous 28-day period. Shows sustaine
Internal Benchmark	Your own historical trend line — compare current period to your past performance.
External Benchmark	Anonymised comparison against similar-size organisations. Helps answer "Are we ahead or

Per-App Breakdown

The Adoption page breaks down usage across individual M365 applications:

App	What It Tracks
Teams	Meeting summaries, chat Copilot interactions, Teams Copilot actions
Outlook	Email drafting, summarisation, coaching suggestions
Word	Document drafting, rewriting, summarisation
PowerPoint	Slide generation, design suggestions, narrative creation
Excel	Formula generation, data analysis, chart creation
Copilot Chat (work)	Chat interactions grounded in **tenant data** (SharePoint, emails, calendar)
Copilot Chat (web)	Chat interactions grounded in **internet data** only

> **License Filter: Microsoft 365 Copilot vs Copilot Chat**
>
> At the top of the Adoption page, a **License** filter lets you toggle between **Microsoft 365 Copilot** and **Copilot Chat** views. The Microsoft 365 Copilot filter shows insights for employees with a paid Copilot licence. The Copilot Chat filter shows insights for active users of the free, web-based Copilot Chat app — employees with an M365 licence but *without* the paid Copilot add-on. The Copilot Chat filter appears only if your tenant has Copilot Chat reporting enabled.

> **Copilot Chat (work) vs Copilot Chat (web)**
>
> **Copilot Chat (work)** uses your organisation's tenant data — files in SharePoint, emails, calendar events, and Teams messages — to generate responses. **Copilot Chat (web)** searches the public internet for answers. The distinction matters because "work" mode reflects enterprise data utilisation, while "web" mode shows general AI assistance patterns.

Intent Patterns (Preview)

The Adoption page includes **intent-based metrics** that categorise individual Copilot Chat (work) prompts into common intent categories. These help you understand *how* people use Copilot, not just *how much*.

Intent Category	What It Captures	Example Prompts
Ask and find	Questions and information retrieval	“Find the recording of meeting X from May”, “
Catch up	Summaries, recaps, and action items	“Recap this meeting with key takeaways”, “Su
Draft and brainstorm	Content generation and creative ideation	“Draft a status update email about project X”,
Other	Prompts that don’t fit the above categories	General questions, casual interactions

Intent metrics are also available in **Viva Insights advanced reporting** for deeper analysis.

Expanded App Coverage

Beyond the core M365 apps listed above, the Dashboard also tracks Copilot usage in additional surfaces. Scenario-level breakdowns (e.g., suggested reply, translate, coach, clean data) are available for some apps:

App/Surface	Scenarios Tracked
Microsoft 365 Copilot App	Copilot Chat prompts and interactions
Edge	Copilot Chat interactions in the browser sidebar
OneNote	Summarise, organise, and create content from notes
Outlook	Suggested reply, translate, coach (in addition to draft/summarise)
PowerPoint	Translate, designer visuals, suggestions (in addition to create/summarise)
Excel	Clean data, Python in Excel (in addition to formula/analysis/format)

> **Intent Metrics Are in Public Preview**
>
> Intent-based metrics are rolling out in public preview as of April 2026. Availability may vary by tenant. These metrics will also be available in Viva Insights custom person queries once generally available, enabling analysts to correlate intent patterns with organisational attributes.

“View by” Options

The Adoption page can be sliced by different organisational dimensions. Each requires specific data to be present:

View By	What It Shows	Data Requirement
Group	Adoption by manager's direct/indirect reports	Requires **manager hierarchy** (ManagerId
Job Function	Adoption by role category (Engineering, Sales, HR, etc.)	Requires **FunctionType** attribute in org d
Organization	Adoption by business unit or department	Requires **Organization** attribute in org da
License type	Adoption by Microsoft 365 Copilot vs Copilot Chat	Copilot Chat filter requires tenant-level C

> **"View by: Group" Shows Only One Person?**
>
> If a leader selects "View by: Group" and sees only themselves (or far fewer people than expected), the most common cause is **missing intermediate managers in the org data**. The manager hierarchy chain must include a row for *every* manager between the leader and their reports. Verify that your CSV (or Entra Manager field) has rows for every intermediate manager. Gaps break the chain and orphan the downstream employees from the leader's view.

Scope Filter

Scope	What It Shows	Who Gets It
Your company	Entire tenant (all licensed Copilot users)	Global Admin, Insights Admin, users wit
<Leader Name>	That leader's reporting chain (direct + indirect reports)	Leaders with enabled Copilot Dashboar
Your group	Your own direct and indirect reports	Any leader or manager with dashboard

Suppressed Values ("--")

When you see **"--"** instead of a number, it means the group size is below the **minimum group size** threshold (default: 10). This is a **privacy protection**, not an error. Data is present but suppressed to prevent identification of individuals. If you need to see data for smaller teams, an Insights Admin can adjust the minimum group size in privacy settings — but this should be done carefully with HR and legal approval.

1.3 Impact Page

The Impact page answers: *"What value is Copilot delivering?"*

Top-Level Metrics

Metric	Definition	How It's Calculated
Copilot Actions Taken	Total Copilot interactions in the period	Direct count of all Copilot actions (same as Ac
Copilot Assisted Hours	Estimated hours saved by Copilot	Meeting summaries + search/summaries value
Copilot Assisted Value	Dollar value of time saved	Assisted Hours × hourly rate (default **$72/hr**).
Satisfaction Rate	User satisfaction with Copilot responses	Thumbs up ÷ (thumbs up + thumbs down) rea

Known Metric Underreporting Periods

Microsoft disclosed two periods where certain metrics were underreported due to telemetry issues. Data from these windows may appear lower than actual usage.

Metric Category	Affected Period	Details
Email (Outlook Copilot)	June 1, 2025 – February 18, 2026	Generate email draft and Summarise email thread m
Meetings (Teams Copilot)	September 6 – November 3, 2025	Copilot assisted hours, assisted value, and meeting

If you see dips in these periods, the underreporting issue — not reduced usage — is the most likely explanation.

Export Dashboard Data

You can export de-identified Copilot Dashboard data as a **CSV file** covering weekly metrics for the past six months. This enables offline analysis, board-ready reporting, or integration with other analytics tools.

How to Export

1. Open the Copilot Dashboard in the Viva Insights web app.
2. Navigate to the page containing the data you want to export (Adoption or Impact).
3. Select the **Export** button (typically in the top-right area of the dashboard).
4. The download starts automatically as a **.csv file**.

What's in the Export

Field	Description
Time period	Weekly data points covering the **past 6 months**
Metrics	Adoption and impact metrics matching the dashboard view (active users, actions, assisted hours, etc.
Groupings	Metrics broken down by the filters/groups currently applied in the dashboard
Privacy	All data is **de-identified** — no user-level details are included

Practical Use Cases

- **Board and executive presentations:** Import the CSV into Excel or Power BI to create polished charts with your organisation's branding.
- **Trend analysis beyond 28 days:** The export covers 6 months of weekly data, overcoming the dashboard's 28-day rolling limitation for visual trend tracking.
- **Cross-tool integration:** Feed Copilot metrics into existing BI pipelines, data warehouses, or reporting platforms.
- **Snapshot archiving:** Schedule regular exports to build a historical archive of adoption and impact data.
- **Multi-agency reporting:** Export tenant-level data and combine with org data in Power BI for agency-specific views.

> **Export vs Advanced Analytics**
>
> The dashboard export provides **aggregated, de-identified** data matching what you see on screen. For user-level or custom-segmented analysis, use **Advanced Analytics** (person queries in the Viva Insights analyst workbench). The export is ideal for quick reporting; Advanced Analytics is needed for deeper, customisable analysis.

1.4 Sentiment Section

The Sentiment section lives **within the Impact page** and shows qualitative user feedback about Copilot.

Component	What It Shows	Notes
Sentiment results by question	Aggregated responses to Copilot experience questions	Includes benchmark
Sentiment by group	Heat map showing sentiment across organisational groups	**Viva Insights custo**
Manager team view	Sentiment breakdown for a manager's direct reports	Subject to minimum

No Survey Data?

If no Copilot survey has been deployed, the Sentiment section will show **“No survey responses available.”** This is expected. The **Satisfaction Rate** metric (thumbs up/down) works independently of surveys and will still display on the Impact page regardless of whether surveys have been configured.

2. How to Delegate Access

Dashboard access can be shared with others through delegation. This is how leaders give their managers or analysts visibility into Copilot usage for their scope.

Two Methods to Add Delegates

Method	Steps
Method 1: Settings	Dashboard → **Settings** (gear icon) → **Delegation** → **Add** → search for user → select scope →
Method 2: Share	Dashboard → **Share** button (top right) → **Add** → search for user → select scope → Save

Delegation Rules

Rule	Detail
Maximum delegates	75 per delegator
No cascading	Delegation does not flow downward. If Alice delegates to Bob, Bob cannot re-delegate t
"Your group" scope	Delegate sees the delegator's reporting chain only
"Your company" scope	Delegate sees the entire tenant — use sparingly
Agent Dashboard access	Requires **"Your company"** scope. "Your group" delegates cannot see the Agent Dashbo
Delegator leaves org	All delegates immediately lose access. **Recovery:** another leader must re-delegate to th

> **Plan for Delegator Departures**
>
> If a key delegator (e.g., a VP or CIO) leaves the organisation, **all 75 delegates** could lose dashboard access simultaneously. Document who has delegated to whom and ensure at least two senior leaders have overlapping delegation lists for continuity.

3. Copilot Analytics Reports

Copilot Analytics Reports are pre-built reports available at **insights.cloud.microsoft → Reports**. They provide deeper analysis than the dashboard pages without requiring Power BI setup.

Report Types

Type	Examples	Description
Out-of-the-box	Copilot Studio Agents, Copilot for Sales Adoption	Pre-built by Microsoft. Available automatically
Shared	Custom reports published by your analysts	Analysts with partition access can create que

Access

- Anyone with **Dashboard access** (direct or delegated) can view reports.
- **Analysts** with a global partition can create and share reports.
- **Global Admins** have full access.

No additional setup is required beyond what is already configured for the Copilot Dashboard.

4. Advanced Power BI Templates

When the dashboard and built-in reports are not enough, Microsoft provides Power BI templates that connect directly to Viva Insights query data. Use the decision guide below to pick the right template.

Which Template Do I Need?

Question You're Asking	Recommended Template
"Is Copilot paying for itself?"	**Copilot Impact**
"Which teams are using Copilot?"	**Copilot Adoption**
"Quick executive talking points"	**Copilot Headlines** (preview)
"Did Copilot improve our business outcomes?"	**Copilot Business Impact**
"How do Copilot Studio agents perform?"	**Copilot Studio Agents**
"What do employees think about Copilot?"	**Copilot Employee Experience** (Glint)
"Standard reports are too high-level"	**Custom Person Query**

Template Reference

Template	Purpose
Copilot Impact	ROI analysis: Assisted Hours, Assisted Value, time savings by app
Copilot Adoption	Adoption trends, per-app usage, active user counts by group
Copilot Headlines	One-page executive summary with key metrics and trends
Copilot Business Impact	Before/after behavioural analysis: meeting time, focus time, email changes
Copilot Studio Agents	Agent usage, response quality, user engagement with custom agents
Copilot Employee Experience	Correlates Copilot usage with Glint survey sentiment and engagement scores
Custom Person Query	Fully custom analysis — select any combination of Copilot and collaboration metric

5. Agent Dashboard

The Agent Dashboard provides visibility into Copilot Studio agents and declarative agents running in your tenant. It is accessible from the Copilot Dashboard for users with **"Your company"** scope.

Key Metrics

Metric	Definition
Active agents	Number of agents that received at least one user interaction in the period
Active users	Unique users who interacted with any agent
Agent responses	Total number of responses generated by agents
Returning users	Users who interacted with agents in both the current and previous period
% of Copilot users using agents	Agent active users ÷ total Copilot active users — shows agent penetration
Copilot Credits	Credits consumed by agent interactions (relevant for pay-as-you-go billing)

Unique Insights

Insight	What It Tells You
Most popular agent	Agent with the highest number of active users
Most versatile agent	Agent used across the widest variety of use cases or groups
Most shared agent	Agent shared with the most users or groups in the tenant

Filters

Filter	Options
Agent creator type	User, Your org, Microsoft, Partner
Agent source	Filter by where the agent was built or published

Three Practical Scenarios

Scenario 1: Post-Launch Adoption Review

Your organisation deployed three custom agents last month. Use the Agent Dashboard to answer:

- How many users actually tried each agent? (Active users per agent)
- Are people coming back? (Returning users)
- Which agent is getting the most traction? (Most popular agent)

Action: Double down on training for the popular agent; investigate why low-adoption agents are being ignored (discoverability? relevance?).

Scenario 2: Cost Governance for Pay-As-You-Go

Your tenant uses PAYG billing for agent interactions. Use the Agent Dashboard to answer:

- How many Copilot Credits are being consumed? (Credits metric)
- Which agents are the biggest consumers? (Sort by responses)
- Are partner-built agents driving unexpected costs? (Filter by creator type: Partner)

Action: Set credit alerts, review high-consumption agents with their owners, consider blocking non-essential agents.

Scenario 3: Shadow AI Detection

Users are creating their own agents without IT approval. Use the Agent Dashboard to answer:

- How many user-created agents exist? (Filter by creator type: User)
- Are any user-created agents being widely shared? (Most shared agent)
- Do any of these agents have external data connections that violate policy?

Action: Follow the Detect → Act workflow below.

Detect → Act Workflow

Stage	Tool	Action
Detect	Agent Dashboard	Identify agents that are unapproved, high-cost, or widely shared witho
Decide	Governance process	Evaluate the agent against your organisation's AI governance policy (da
Act Quick	M365 Admin Centre	Immediate actions: **Block** (disable agent), **Approve** (whitelist), or **Revi**
Act Policy	Power Platform Admin Centre	Long-term controls: apply **DLP policies** to restrict connector access, e

6. Suggested Review Cadence

Frequency	Who	What to Review
Weekly	IT Admin	Licence utilisation, assignment trends
Fortnightly	Leaders / Managers	Assisted Hours, Assisted Value, adoption trends, Satisfaction Rate
Monthly	Leaders / Managers	Analytics Reports, agent adoption, new agent activity
Quarterly	Analysts + Executive Sponsor	Before/after behavioural analysis, ROI report, cross-group comparisor

7. What to Read Next

Document	When to Read It
Analyst Playbook	You need to run custom queries, connect Power BI templates, or build cross-group report
Billing Operations	You need to manage licence costs, billing cycles, or PAYG credit governance
Troubleshooting Guide	Something isn't working — missing data, access issues, or unexpected behaviour
Admin Setup Guide	You need to go back and configure or reconfigure dashboard access, org data, or VFAM s
