Quick-Start Cheat Sheet

1. Executive Summary

This guide provides a complete procedural framework for implementing Microsoft 365 Copilot analytics and monitoring. It covers **five** distinct reporting tiers, each serving different stakeholders with varying prerequisites and capabilities.

Architecture Diagram

Tier 5

Advanced Analytics (Power BI)

Analysts

Custom queries & reports

Viva Insights license

Progressive implementation: Each tier builds on the previous. All tiers share organizational data and privacy settings.

Quick Reference: Which Dashboard Do You Need?

Dashboard	Best For	Setup Time	Key Capability
Admin Center Reports	IT Admins tracking license usage	None (built-in)	User-level license utilization
Copilot Dashboard	Business leaders measuring ROI	Up to 7 days	Copilot Assisted Hours & cost
Copilot Analytics Reports	Leaders wanting targeted insights	Same as Dashboard	Out-of-the-box deep-dive
Agent Dashboard	Leaders tracking agent adoption	Same as Dashboard	Agent-specific usage & cost
Advanced Analytics (Power BI)	Analysts doing deep-dive analysis	1–2 weeks	Before/after adoption correlation

Level-of-Effort Summary

Tier	Active Config	Wait/Processing	Ongoing Maintenance	Personas Needed
Admin Center	15–30 min	72 hours	None	Global Admin
Copilot Dashboard	2–4 hours	Up to 7 days	Monthly org data refresh	GA, AI Admin, Org Admin
Copilot Analytics Reports	None (auto)	Same as Dashboard	None	Dashboard admin
Agent Dashboard	10 min (verify)	Same as Dashboard	None	AI Admin, content admin
Advanced Analytics	4–8 hours	Query-dependent	Monthly refresh + query re-runs	Insights Admin

Implementation Timeline Overview

- **Day 1:** Admin Center reports available (~72 hours after first Copilot usage)
- **Day 7:** Copilot Dashboard + Copilot Analytics Reports fully populated (if prerequisites met)
- **Day 7:** Agent Dashboard available (on by default as part of Viva Insights web app)
- **Week 2+:** Advanced Analytics operational (after org data upload and query setup)

TIP: Start Simple

Begin with Admin Center reports to establish baseline license tracking, then progressively enable Copilot Dashboard, Analytics Reports, and Advanced Analytics as organisational maturity increases.

2. Introduction

2.1 Purpose of This Guide

Use this guide when you want to get started with Copilot Analytics. It provides step-by-step procedures to configure all five Microsoft Copilot monitoring dashboards, from basic license tracking to advanced ROI analysis.

2.2 Scope

In Scope

- Microsoft 365 Copilot applications: Word, Excel, PowerPoint, Outlook, Teams, Loop, OneNote, Edge, Copilot Chat
- Five monitoring tiers: Admin Center, Copilot Dashboard, Copilot Analytics Reports, Agent Dashboard, Advanced Analytics
- License utilization tracking, ROI measurement, sentiment analysis, and agent adoption
- Privacy configuration, exclusion lists, and delegation management

Out of Scope

- Other Copilot products: Copilot for Sales, Copilot for Service, GitHub Copilot, Security Copilot
- **Copilot Chat usage by unlicensed users** — users with M365 E3/E5 (without the paid Copilot add-on) can access Copilot Chat at copilot.microsoft.com, but their usage is **not tracked** by any of the 5 analytics tiers in this guide. See the callout below.
- Custom Power BI report development beyond Microsoft-provided templates
- Third-party analytics integrations
- Broader Viva Insights productivity metrics independent of Copilot (meeting time, focus time, after-hours work, collaboration network analysis)

UPDATE (April 2026): Copilot Chat (Free) Users Are Now Partially Visible

As of April 2026, the Copilot Dashboard includes a **Copilot Chat licence filter** that shows adoption insights for M365 E3/E5 users who use the free Copilot Chat app without the paid add-on. Available with 1+ Copilot licences; Copilot Chat reporting must be enabled.

What the Dashboard now shows for free Copilot Chat users:

- Active Copilot Chat users count
- Adoption trends over time
- Group-level breakdowns (Organisation, Job function, Group)

What is still NOT tracked for free users:

- **Admin Center Copilot Usage Report** — only shows licensed Copilot users
- **Viva Insights / Advanced Analytics** — Copilot metrics in custom queries still require Copilot licences on the measured population
- **Impact page metrics** (Assisted Hours, Assisted Value) — require paid Copilot licences

For deeper free Copilot Chat analysis beyond the dashboard (e.g., user-level adoption data for building a paid-licence business case), the following supplementary data sources remain available:

- **M365 Audit Logs (Purview):** Copilot Chat interactions generate audit log entries queryable via Purview Compliance Portal or the Office 365 Management Activity API.
- **Microsoft 365 Usage Analytics:** The M365 Usage Analytics content pack in Power BI may surface some Copilot Chat activity data.

WARNING: Customer Wants Productivity Metrics Beyond Copilot?

If the primary interest is **meeting time, effort mapping, focus time, or collaboration patterns** independent of Copilot usage, those are delivered through the **Viva Insights Advanced Analysis** workbench — not the Copilot Analytics tiers covered in this guide. The same Viva Insights licence (included with Copilot) and the same Insights Analyst role are used, but the queries, templates, and metrics are different.

Refer to the Viva Insights setup checklist and the Advanced Analysis introduction for that workstream. The org data upload and privacy settings configured in this guide carry over.

2.3 Audience & Prerequisites

This guide assumes:

- Level 200 familiarity with Microsoft 365 administration (Admin Center navigation, Entra ID basics, license assignment)
- No prior experience with Copilot-specific dashboards or Viva Insights

- Access to a tenant with Microsoft 365 Copilot licenses

NOTE: Terminology

Terms specific to Viva Insights (such as Assisted Hours, partitions, and organizational data) are defined on first use and compiled in Appendix B: Glossary.

2.4 Pre-Configuration Discovery Questions

Before touching any configuration, run through these qualifying questions:

#	Question	Why It Matters
1	How many M365 Copilot licenses are assigned (not purchased)?	1+ for core dashboard; 50+ for adva
2	Is the Entra ID manager hierarchy populated for most users?	Determines automatic vs. manual d
3	Do you have an HR data export available (department, function, location)?	Required for group-level filtering an
4	Has anyone been assigned the AI Administrator role?	Required to manage dashboard acc
5	Do you have compliance/legal requirements to exclude specific users?	Drives exclusion list configuration (
6	Has Copilot already been rolled out, or is it pre-deployment?	Before/after analysis needs 4 weeks
7	Do you use Viva Glint or Viva Pulse for employee surveys?	Enables sentiment page with filters
8	What is the primary reporting need: Copilot-only or broader productivity?	Determines whether standalone Viv
9	Are you deploying Copilot agents / Copilot Studio agents?	Determines whether Agent Dashbo
10	Who are the target report consumers (IT admins, BU leaders, analysts)?	Drives which tiers to prioritize

3. Dashboard Overview & Selection Guide

3.1 Dashboard Comparison

Capability	Admin Center	Copilot Dashboard	Analytics Reports	Agent Dashboard
Primary Audience	IT Admins	Leaders, Managers	Leaders, Analysts	Leaders, Analysts
Minimum Licenses	Any (1+)	1+ Copilot (50+ for advanced)	Same as Dashboard	50 Copilot OR Viva Ir
Setup Complexity	None	Low–Medium	None (auto)	Low
Data Latency	~72 hours	Up to 6 days	Up to 6 days	Up to 6 days
User-Level Tracking	Yes	No (group-level)	No (group-level)	No (group-level)
ROI Metrics	No	Assisted Hours/Value	Yes (targeted)	No
Sentiment Data	No	Yes	Yes	No
Agent Tracking	No	No	No	Yes
Before/After Analysis	No	No	No	No
Export Capabilities	CSV	Limited	Limited	Limited

3.2 Decision Framework

1. Do you need user-level license utilization data? → Start with **Admin Center Reports**
2. Do you have 1+ assigned Copilot licences AND want ROI metrics? → Enable **Copilot Dashboard** (50+ for advanced features)
3. Do leaders want ready-to-use targeted reports? → **Copilot Analytics Reports** (auto-available with Dashboard)
4. Are you deploying agents (Copilot Studio, etc.)? → Enable **Agent Dashboard**
5. Do you need before/after adoption analysis or custom segmentation? → Configure **Advanced Analytics**

TIP: Progressive Implementation

Most customers benefit from implementing all tiers progressively. Start with Admin Center (immediate), add Copilot Dashboard + Analytics Reports (week 1), then Advanced Analytics (week 2+) for comprehensive coverage.

3.3 RACI Matrix

Activity	Global Admin	AI Admin	Insights Admin	Insights An
Assign Copilot/Viva licences	R/A	–	–	–
Assign Insights Admin/Analyst roles	R/A	–	–	–
Enable/disable Advanced Analysis (VFAM)	–	R/A	–	–
Configure Manager Settings	–	C	R/A	–
Upload organizational data	C	–	R/A	–
Upload org data (post-migration via M365 Admin Center)	C	–	C	–
Configure privacy / group size	–	C	R/A	–
Create exclusion lists	–	R/A	–	–
Run Advanced Analytics queries	–	–	C	R/A
Delegate dashboard access	–	–	–	–
View & act on insights	I	–	–	C

R = Responsible, A = Accountable, C = Consulted, I = Informed

3.4 Global Admin Readiness Checklist

When a Global Admin is asked “*Is everything set up for the analyst?*”, use this quick diagnostic. Each row can be verified in under 2 minutes.

#	Check	Where to Verify
1	Copilot or Viva Insights licences assigned	Admin Center → Billing → Licenses → check both Microsoft 365 Copilot
2	Insights Admin role assigned	Admin Center → Settings → Viva → Viva Insights → Admins
3	Insights Analyst role assigned	Admin Center → Settings → Viva → Viva Insights → Add-on Plan → In
4	VFAM — Copilot Dashboard ON	Admin Center → Settings → Viva → Viva Insights → Turn Advanced In
5	VFAM — Advanced Analytics ON	Same screen as above
6	VFAM — Behavioral Experiences ON	Same screen as above
7	Org data uploaded	M365 Admin Center → Organizational Data in Microsoft 365 (post-mi
8	Partition configured & analyst assigned	Viva Insights web app → Admin → Privacy settings → Partitions

If any row fails, follow the corresponding section in this guide: licences (Section 5.3 Step 1), roles (Section 8.3 Step 1), VFAM (Section 5.3 Step 3), org data (Section 9), partitions (Section 8.3 Step 2).

4. Dashboard 1: Microsoft 365 Admin Center Reports

4.1 When to Use This Dashboard

- Track which users have Copilot licenses assigned vs. actively using Copilot
- Identify inactive licensed users for potential license reallocation
- Monitor per-application usage (Word, Excel, Teams, etc.)
- Export user-level activity data for custom analysis
- Quick visibility without additional configuration

4.2 Prerequisites

Requirement	Details
Copilot License	At least one license assigned; no minimum threshold
Subscription Tier	Any tier supporting Copilot: E3/E5, Business Standard/Premium

Required Admin Roles

Role	Access Level	Can Export CSV?
Global Administrator	Full access to all reports and settings	Yes
Reports Reader	Full access to usage reports	Yes
Usage Summary Reports Reader	Aggregate data only; no user-level details	No
License Administrator	Manage license assignments only	No (no report access)

IMPORTANT: Role Assignment

request **Reports Reader** role. This provides full report access without Global Admin privileges.

4.3 Step-by-Step Implementation

Estimated Time: 15–30 minutes (plus 72 hours for data population)

Step 1: Verify Admin Role Assignment (5 min)

1. Navigate to **Microsoft 365 Admin Center**: <https://admin.microsoft.com>
2. Go to **Users → Active users → Select your account**
3. Click **Manage roles** and verify you have Reports Reader or higher
4. If not, request role assignment from Global Administrator

Step 2: Access Copilot Usage Reports (5 min)

1. In Admin Center, navigate to **Reports → Usage**
2. Scroll to find **Microsoft 365 Copilot** or use the search function
3. Click to open the Copilot usage report

Step 3: Configure Report Parameters (5 min)

1. Select timeframe: 7, 30, 90, or 180 days
2. Review summary cards: Total assigned licenses, Active users, Adoption rate
3. Scroll to per-application breakdown

Step 4: Export User-Level Data (5 min)

1. Click **Export** in the top right corner
2. Select CSV format
3. Open downloaded file to verify user-level activity data

NOTE: Data Availability

Reports populate within approximately 72 hours of user activity. If this is a new Copilot deployment, allow 3 business days before expecting data.

4.4 Success Criteria

☐ Can access Admin Center → Reports → Usage → Microsoft 365 Copilot

☐ Summary cards display: Assigned licenses count, Active users count, Adoption percentage

☐ Per-application breakdown shows usage across Word, Excel, PowerPoint, Outlook, Teams

☐ Can export CSV file with user-level activity data

☐ Data is no older than 72 hours (check report timestamp)

4.5 Limitations

- No ROI or productivity impact metrics
- No sentiment tracking
- No group-level trend analysis
- No before/after adoption comparisons
- Data retention limited to 180 days maximum

4.6 What is Next

Once Admin Center reports are operational, proceed to the Viva Insights Copilot Dashboard (Section 5) to unlock ROI metrics and Copilot Assisted Hours/Value calculations.

4.7 References

- M365 Copilot usage report
- Admin roles overview
- Who can see reports

5. Dashboard 2: Viva Insights Copilot Dashboard

5.1 When to Use This Dashboard

- Business leaders need to demonstrate Copilot ROI to executives
- Track Copilot Assisted Hours (time saved through Copilot usage)
- Calculate Copilot Assisted Value (monetary value of time saved)
- Monitor adoption trends at group/department level
- Collect and analyse user sentiment about Copilot effectiveness
- Identify readiness gaps before broader rollout

IMPORTANT: Viva Insights Web App Dependency

The Copilot Dashboard is part of the Viva Insights web app. Previous standalone PowerShell controls for the Copilot Dashboard are no longer available. Access is now managed by enabling or disabling the Viva Insights web app itself—disabling the web app disables **all** features including the Copilot Dashboard, Copilot Analytics Reports, Agent Dashboard, and Advanced Analysis tools.

5.2 Prerequisites and Configuration

Licensing Requirements

Requirement	Details
Core Features (1+ Copilot licences)	Readiness, Adoption, and Impact pages with tenant-level and
Advanced Features (50+ Copilot or 50+ Viva Insights)	Agent Dashboard, benchmarks, intelligent summaries, sentim
Viva Insights Service Plan	Automatically included with every Copilot license (no addition

NOTE: Copilot Licence = Full Viva Insights Access

Every M365 Copilot licence includes the **Viva Insights service plan at no additional cost**. This covers **all** Viva Insights capabilities — including behavioural collaboration metrics (meeting time, focus time, email, chat), Copilot Dashboard, Copilot Analytics Reports, Agent Dashboard, and Advanced Analytics (Power BI). There is no separate “premium” tier to purchase for behavioural data if you already have Copilot licences. The only requirement is enabling the `TenantPolicyForBehavioralExperiences` VFAM policy (see Section 5.3).

NOTE: Licence Thresholds

With **1+ Copilot licences**, tenants get the Readiness, Adoption, and Impact pages with tenant-level and group-level metrics. With **50+ assigned Copilot licences** or **50+ assigned Viva Insights licences**, tenants additionally get agent insights, benchmarks, intelligent summaries, sentiment surveys, trendlines, manager delegation, and the “All” licence type view. Per the MS Learn feature-availability table, the two thresholds are **independent — not summed**: a mixed total such as 30 Copilot + 20 Viva Insights does *not* qualify; one of the two counts must reach 50 on its own.

NOTE: Partial Rollout — Analytics Interpretation

If only a subset of employees have Copilot licences (e.g., 200 of 10,000), the dashboard **only measures licensed users**. Unlicensed employees are excluded from the “measured population.” This means:

- Adoption metrics show “200 of 200 active” (not 200 of 10,000)
- Group filters (Department, Location) only show groups with licensed users in them
- Small rollout groups may frequently hit the minimum group size threshold, causing data suppression (N/A values)
- Before/after comparison data is only meaningful for licensed users

Recommendation: For rollouts under 500 users, focus on **Admin Center user-level reports** (Section 4) for adoption tracking and use the **Copilot Dashboard** primarily for ROI metrics. Consider increasing the rollout to 500+ users before investing in Advanced Analytics custom queries.

Required Admin Roles

Role	Assigned By	Capabilities
Global Administrator	N/A (built-in)	Full access to all settings; inherits Insights Admin privileges
AI Administrator	Global Admin	Manage dashboard access, enable/disable web app, create exc
Viva Insights Administrator	Global Admin	Upload org data, configure privacy & manager settings, manage
Insights Analyst	Global/Insights Admin	Run advanced queries; with global partition → automatic dashb

NOTE: Additional Stakeholders Beyond Viva Insights Roles

The roles above are specific to Viva Insights. A complete deployment also requires coordination with:

- **Entra / directory owner** — maintains manager hierarchy accuracy and domain hygiene (critical for dashboard scope filters and partition correctness)
- **HR / org-data owner** — provides and refreshes employee attributes (Agency, Organization, FunctionType) for CSV uploads
- **Power BI / Fabric admin** — required if delivering reports via Power BI workspaces (workspace creation, access governance, RLS)
- **Licensing / finance owner** — manages licence assignments, monitors the 50-licence threshold, and approves any additional Power BI Pro or Viva Insights standalone licensing
- **Compliance / audit owner** — reviews Unified Audit Log entries for Viva Insights publishing (PublishReport, RemovedPublishedReport) and delegation (AddDelegates, RemoveDelegates) actions to verify data access governance

What Each Role Sees in the Viva Insights Web App

Use this table to verify your role is working correctly. If what you see doesn’t match, check role assignment in Admin Center → Settings → Viva → Viva Insights.

Role	Left Nav You’ll See
AI Administrator	Admin panel visible (General, Delegation, Manager settings, Privacy)
Insights Admin	Admin panel: Data quality, Data hub, Organisational data, Business
Insights Analyst	Analysis section: Publish reports, Create analysis, Analysis results,
AI Admin + Insights Admin	Full Admin panel (both sets of settings). No “Create analysis”.
AI Admin + Insights Admin + Insights Analyst	Full Admin panel AND Analysis section with “Create analysis” butto

WARNING: AI Administrator Access Gotcha

The AI Administrator role does **NOT** grant automatic access to view the Copilot Dashboard. AI Admins must explicitly add themselves via the access management settings. This is a common point of confusion during implementations.

Access Requirements

Access Type	Requirements
Automatic (Entra ID)	Tenant has 2,500+ users; majority in single reporting line; user in top 3 org levels OR has signif
Manager Access	User must have Viva Insights license + manager hierarchy in Entra ID or uploaded org data + In
Delegated Access	User with dashboard access grants access to others; max 75 delegates; scope can be group or
Analyst Access	Viva Insights Analyst with global partition access gets automatic dashboard access

Configuration Processing Times

Configuration Change	Processing Time
User/group access changes	24 hours
Manager settings changes	1 hour
Organizational data upload	Up to 7 days
Minimum group size change	24 hours
Exclusion list upload	Up to 5 days
Exclusion list removal	Up to 3 days
Initial dashboard data population	Up to 7 days after licenses assigned

5.3 End-to-End Copilot Dashboard Enablement

Estimated Time: 2–4 hours active configuration + up to 7 days for data processing

This section covers the complete sequence to get the Copilot Dashboard operational — from licence verification through to first data appearing. Follow each step in order.

Step 1: Verify Licence Threshold (10 min)

1. Navigate to <https://admin.microsoft.com>
2. Go to **Billing** → **Licenses**
3. Locate Microsoft 365 Copilot and note the **assigned** count (not purchased)
4. Confirm at least 1 Copilot licence is assigned for core dashboard features (50+ for advanced features)
5. For advanced features (benchmarks, Agent Dashboard, sentiment, delegation), confirm at least **50 Copilot licences** or at least **50 Viva Insights licences** are assigned — the two thresholds are independent, not summed

Step 2: Verify Entra ID Hierarchy (15 min)

1. Navigate to <https://entra.microsoft.com>
2. Go to **Users** → select several sample users across different levels
3. For each user, verify the **Manager** attribute is populated
4. If hierarchy is incomplete, work with your directory team to populate
5. Note: Automatic access criteria are analysed weekly by Microsoft

Step 3: Verify VFAM Policies Are Enabled (10 min)

Requires **AI Administrator** or **Global Administrator** role. This step ensures no previous admin has disabled critical features.

- 1. Navigate to `https://admin.microsoft.com`
- 2. Go to **Settings → Microsoft Viva → Viva Insights**
- 3. Select the **Set up and management** tab
- 4. Under **Access management**, select **Turn Advanced Insights on or off**
- 5. You will see the **Viva Insights** policy list. Verify the following are set to **On**:

Policy	Required State	What Happ
Viva Insights web app (replaces former "Copilot Dashboard" toggle)	On	The entire
Copilot Dashboard Delegation	On	Users canr
Behavioral Experiences	On	Collaborati
Auto CxO Identification (Dashboard AutoEnablement)	On (recommended)	Senior leac
Copilot Advanced Analytics	On (if planning Section 8)	Analysts c

If any policy shows **Off** or is scoped to specific users instead of **Everyone**, verify whether this was intentional. If not, select the policy → edit → set to **On** for **Everyone** (or the appropriate scope).

IMPORTANT: This Is the #1 Cause of "Dashboard Not Working"

If a previous admin created a custom VFAM policy that restricts the Copilot Dashboard to specific users, new users added via the access management settings **will not be able to view the dashboard** unless they are also included in the VFAM policy. Always check this screen first when troubleshooting access issues.

Accidental VFAM disable — blast radius & recovery: If the Copilot Dashboard policy is turned **Off**:

- **All users** (auto-identified leaders, manually added users, and delegates) immediately lose dashboard access
- Delegates are **not** removed — their delegation records survive, but they can’t access the dashboard until the policy is re-enabled
- **Recovery:** Turn the policy back On for Everyone (or the required scope). Access takes **up to 24 hours** to propagate. No data is lost during the outage.
- **Prevention:** Restrict VFAM policy editing to Global Administrators only. Document which policies are enabled and why in your admin runbook.

Step 4: Configure Dashboard Access — Who Should See It (20 min)

Requires **AI Administrator** or **Global Administrator** role.

There are three ways users get access to the Copilot Dashboard. Decide which apply:

Access Method	Who Gets Access
Automatic (Entra ID)	Senior leaders in top 3 org levels with significant reporting lines (tenants with 2,500+ employees)
Manual (Admin-assigned)	Specific users or groups you choose — AI Admins, BU leaders, HR, analysts, etc.
Delegated	People that existing dashboard users choose to share with (max 75 per person)

Recommended approach: Enable automatic access for senior leaders + manually add the AI Admin, Insights Admin, Insights Analyst, and any additional stakeholders (BU leaders, HR, change management leads).

IMPORTANT: AI Admin Self-Access

If you are an AI Administrator and need to view the dashboard yourself, you must add yourself using the manual access method above. The AI Administrator role does not grant automatic dashboard viewing access.

WARNING: Multi-Agency Tenants — Different Posture Required

If your tenant hosts **multiple independent agencies** that must not see each other's Copilot data, **do not follow the general enablement steps above**. Auto CxO Identification and broad manager access grant Copilot Dashboard access showing "Your company" data across all agencies. Instead, follow the Multi-Agency Isolation Architecture playbook, which prescribes a lockdown-first posture: disable AutoCxO, disable delegation, restrict dashboard access to Central IT, and deliver reports via isolated Power BI workspaces or partition-scoped Publish Reports.

Step 5: Enable Manager Access to Team-Level Data (15 min)

Requires **Insights Administrator** or **AI Admin** role.

1. Navigate to Viva Insights web app: `https://analysis.insights.cloud.microsoft`
2. Go to **Manager Settings** (under Platform Setup on the left)
3. Toggle on "**Grant managers scoped access to Copilot insights**"
4. Set the **Minimum team size** (minimum 5; includes manager in count)
5. Choose which managers to enable:
 - **All managers** — all measured managers meeting team size threshold
 - **Select Active Directory group** — choose from Entra ID data
 - **Upload .csv file** — list specific manager email addresses
6. Click **Save changes** (takes effect within 1 hour)

Alternative path via Admin Center: Settings → Viva → Viva Insights → Set up and management → Under **Copilot Dashboard**, select **Turn Insights for Managers on or off** and **Assign group managers to Insights for Managers**.

Step 6: Upload Organizational Data (30–45 min)

See Section 9: Organizational Data Reference for full details on both upload methods and attribute mapping.

Step 7: Configure Minimum Group Size for Privacy (10 min)

Default is 10; minimum allowed is 5.

For tenants **WITHOUT** Viva Insights license:

1. <https://admin.microsoft.com> → Settings → Microsoft Viva → Viva Insights
2. Under **Copilot Dashboard**, select **Manage minimum group size**
3. Enter preferred minimum (≥ 5) → Save (takes effect in 24 hours)

For tenants **WITH** Viva Insights license:

1. <https://analysis.insights.cloud.microsoft> → Admin → Privacy settings
2. Configure minimum group size → Save (takes effect in 24 hours)

Step 8: Create Exclusion List (Optional, 20 min)

Requires AI Administrator role.

1. <https://admin.microsoft.com> → Settings → Microsoft Viva → Viva Insights
2. Select **Unified exclusion list**
3. Choose method: CSV upload (PersonId column), Entra ID groups, or Replace all
4. Wait up to 5 days for exclusion to take effect

NOTE: Exclusion List Scope

The exclusion list removes users from both the Copilot Dashboard AND Viva Insights collaboration reports in Advanced Analysis. It also excludes M365 Copilot Chat (web) usage data.

Step 9: Configure Hourly Rate for ROI (10 min)

1. Navigate to the **Impact page** on the Copilot Dashboard
2. Select **Hours and Value calculator**, then select **Value calculator**
3. Default hourly rate is \$72/hour (USD, based on U.S. Bureau of Labor Statistics)
4. Adjust to your loaded labour rate and select the appropriate currency
5. Document the rate used for future reference

How to calculate a loaded labour rate: (Average base salary + benefits + overheads) ÷ annual productive hours (typically ~1,880). For Australian customers, consider using AUD values directly — the dashboard displays in the currency you enter but does not convert. Example: AUD \$95/hour for a mid-level professional.

WARNING: Hourly Rate Is Session-Only

As of March 2026, changes to the hourly rate and currency are **not saved persistently**. You must re-enter your preferred rate **every time you reopen the Copilot Dashboard**. This is a current platform limitation — the settings reset on page reload. Agree on the rate with stakeholders and document it, so it can be consistently re-applied.

5.5 Sentiment & Survey Configuration

Estimated Time: 30–60 min | Can be configured at any time after dashboard enablement

Why Sentiment Matters

Usage metrics tell you **how much** Copilot is used. Sentiment tells you **how employees feel about it**. Leaders need both to make informed decisions about Copilot investment, enablement, and change management. The Copilot Dashboard's Impact page includes two distinct sentiment signals:

- **Satisfaction Rate** (automatic) — Thumbs-up/down reactions to Copilot responses across M365 apps. No setup needed. Shows on the Impact page as a 28-day rolling metric.
- **Sentiment section** (requires survey data) — Shows employee responses to Microsoft's four recommended Copilot survey questions, compared against Microsoft's benchmark. Requires one of the setup options below.

When to do it: After the dashboard is live and users have had 2–4 weeks of Copilot experience. Survey too early and responses will reflect unfamiliarity, not impact.

Choose Your Sentiment Data Source

Option	Best For
A: Viva Glint	Organisations with Viva Glint already deployed for engagement surveys
B: Viva Pulse	Quick, lightweight surveys sent from the Dashboard itself
C: CSV Upload	Organisations using third-party survey tools (Qualtrics, SurveyMonkey, etc.) or manual data entry
D: Aggregated Upload	Organisations without Viva Insights that want a simple summary view

Priority Rule: If You Upload Both

If you upload survey data via both CSV (.csv file) **and** aggregated results (Admin Center), only the **CSV results** are shown on the Dashboard. The aggregated results only appear if you subsequently delete the CSV data.

Microsoft's Four Recommended Copilot Survey Questions

All survey options use the same four questions. Include these in your survey to enable comparison with Microsoft's global benchmarks:

Question #	Statement (use verbatim)
1	<i>Using Copilot helps improve the quality of my work or output</i>
2	<i>Using Copilot helps me spend less mental effort on mundane or repetitive tasks</i>
3	<i>Using Copilot allows me to complete tasks faster</i>
4	<i>When using Copilot I am more productive</i>

Respondents should answer on a 5-point Likert scale: Strongly Disagree, Disagree, Neutral, Agree, Strongly Agree.

Option A: Viva Glint — Copilot Impact Survey Template

Requires: Viva Glint licence (part of Viva Suite or standalone). **Role:** Viva Glint Admin.

1. In the Viva Glint admin portal, create a new survey program using the **Microsoft Copilot Impact Survey** template.
2. The template includes the four recommended questions pre-configured. You can add additional questions if needed.
3. Set the survey audience (all Copilot-licenced users, or specific groups).
4. Set the survey cadence — Microsoft recommends recurring deployment to track trends over time.
5. Launch the survey. Results flow automatically to the Copilot Dashboard's Sentiment section.
6. On the Dashboard, use the **Survey** toggle to switch between Glint, Pulse, or CSV sources (if multiple are configured).

What you get: Sentiment results by question (with Microsoft benchmark comparison), sentiment heat map by group (with filters by Organisation, Job Function, etc.), and manager team-level views. If you also have Viva Insights, you can use Glint's cross-program intelligence to correlate Copilot sentiment with engagement scores.

Advanced: The Copilot Employee Experience (Glint) PBI template in the Viva Insights analyst workbench combines Copilot usage data with Glint survey responses for deeper analysis. This is a separate report from the Dashboard Sentiment page.

Option B: Viva Pulse — Launch Directly from the Dashboard

Requires: Viva Pulse licence (included with M365 Copilot licence, Viva Suite, or Viva Workplace Analytics and Employee Feedback). **Role:** Any user with Dashboard access.

1. In the Copilot Dashboard, navigate to the **Impact** page.
2. Scroll to the **Sentiment** section.

3. Select **Start new Pulse survey** (button at the bottom of the Sentiment section).
4. The Copilot Impact template opens in Viva Pulse with the four questions pre-loaded.
5. Customise audience and add optional extra questions → Send.
6. Results automatically appear in the Dashboard Sentiment section once responses are collected.

Alternative: You can also launch the Copilot Impact template from the Viva Pulse web app or the Pulse Teams app → Browse all templates → Microsoft 365 Copilot Impact.

Option C: CSV Upload — Third-Party or Manual Surveys

Requires: Viva Insights subscription. **Role:** Insights Administrator.

1. Run your Copilot survey using any tool (Microsoft Forms, Qualtrics, SurveyMonkey, etc.). Include the four recommended questions using the exact wording above.
2. Export the results and **convert to a 100-point scale:**

Survey Response	Normalised Score
Strongly Disagree	0
Disagree	25
Neutral	50
Agree	75
Strongly Agree	100

3. Format the CSV file with these exact columns (questions must be in this order):

User AAD ID/Email address	Question 1	Question 2	Question 3	Question 4
user@tenant.com	75	25	50	100
user2@tenant.com	50	75		75

Leave cells blank for unanswered questions. Download the sample CSV template for reference.

4. Navigate to `analysis.insights.cloud.microsoft` → **Survey data** → **Data connections** → **Manage data sources**.
5. Under **M365 Copilot Impact Survey data upload**, select **Start**.
6. Enter an optional survey name and date range → browse to your CSV → **Upload**.
7. Results appear in the Dashboard Sentiment section within **2 days**.

Option D: Aggregated Results — Admin Center Upload (No Viva Licence)

Requires: No Viva Insights licence. **Role:** Global Administrator.

1. Run your Copilot survey and compute the **% of users who Agreed or Strongly Agreed** with each of the four questions.
2. Navigate to `admin.microsoft.com` → **Reports** → **Adoption Score**.
3. Select **AI adoption score** → **View details**.
4. Under **Assess Copilot sentiment for your org**, select **Record survey results**.
5. Enter the aggregated percentages for each question → Save.

Limitation: This method provides a **tenant-level summary only**. No group filters, no heat maps, no manager team views. If you need those, use Option A, B, or C.

Step 10: Wait for Data Processing

- Initial data processing: up to 7 days after licenses assigned
- Ongoing refresh: daily, 28-day rolling window, ~6-day delay from current date
- Newly licensed employees: additional up to 7-day delay before inclusion

5.4 Understanding Dashboard Pages

The Copilot Dashboard has four main pages plus a Sentiment section. This reference defines every metric shown and explains the data dependencies behind each view.

Readiness Page

Shows license assignment status and readiness for Copilot adoption. Available with any number of Copilot licences.

What You See	What It Means
Assigned licences count	Number of M365 Copilot licences currently assigned to users (not purchased)
Assignment trend chart	How licence assignments have changed over time

Adoption Page

Displays group-level usage trends across all Copilot surfaces. Available with 1+ assigned Copilot licences. Benchmarks and trendlines require 50+ licences.

Adoption Metrics Defined

Metric	Definition
Active Copilot users	Users with at least one intentional Copilot interaction in the 28-day rolling window
Copilot Actions Taken	Total count of Copilot interactions across all M365 apps in the 28-day window. Includes pro
Usage intensity	Average number of Copilot actions per active user in the 28-day window. Higher intensity in
Consistent usage	Users active in both the current and previous 28-day period. Indicates sustained adoption r
Internal benchmark	Your organisation's current metrics compared to your own historical metrics. Shows whether
External benchmark	Your organisation compared to anonymised similar-size organisations. Toggle "Show benchr

Adoption by App Breakdown

The dashboard shows per-app adoption as a table with the following app rows:

App Row	What It Measures
Teams	Copilot interactions within Teams (meeting summaries, chat prompts, etc.)
Outlook	Copilot email drafts, email summaries, email thread summaries
Word	Draft in Word, Rewrite, Summarize document
PowerPoint	Create presentation, Summarize presentation
Excel	Copilot analysis, formula suggestions, data insights
Copilot Chat (work)	Chat prompts grounded in tenant data (SharePoint, Graph). Uses work context. Requires M36
Copilot Chat (web)	Chat prompts grounded in web data only . No work context. Also requires M365 Copilot licenc

NOTE: Copilot Chat (work) vs Copilot Chat (web)

The dashboard shows these as **two separate rows**. "Work" uses tenant data for answers (SharePoint, Graph, emails) while "Web" uses internet data only. Both rows track **licensed M365 Copilot users only**. E3/E5 users accessing the free Copilot Chat at copilot.microsoft.com without the paid add-on are **not tracked** in either row. See Section 2.2 (Out of Scope) for details on this analytics gap.

"View by" Options and Data Dependencies

The Adoption page lets you change how the per-app table is split using the "View by" dropdown. Each option has different data requirements:

View By	What It Splits On
Group	Direct reports of the scoped leader. Breaks the table into columns per sub-group (e.g., each VP's team)
Job Function	<code>FunctionType</code> / <code>Microsoft_JobDiscipline</code> attribute values
Organization	<code>Organization</code> / <code>Microsoft_Organization</code> attribute values (Department)

WARNING: "View by: Group" Shows Only One Person?

If the Group view shows the entire organisation under a single leader's name with no sub-group breakdown, the uploaded manager hierarchy is either **flat** (most employees report directly to the CEO in the data) or **broken** (intermediate managers are referenced in `ManagerEmail` but don't exist as rows in the dataset).

Fix: Verify the CSV contains a row for every intermediate manager (VPs, Directors). Every `Microsoft_ManagerEmail` value must match a `Microsoft_PersonEmail` in the same file. See Section 10.7 for the full troubleshooting guide.

Scope Filter Behaviour

The **Scope** dropdown at the top of the dashboard determines whose data is displayed:

Scope	What It Shows	Who Gets This Scope
Your company	All employees in the tenant	Senior leaders auto-identified via AutoCxo,
<Leader Name>	All employees in that leader's management chain	Auto-identified leaders. The dropdown lists
Your group	Default view — the viewer's own management chain	Leaders and managers with dashboard acc

Why might the scope filter show only one leader name? This happens when only one person sits at the top of the uploaded manager hierarchy with a clean downward chain. Other leaders whose `ManagerEmail` chains are broken (pointing to managers not in the dataset) won't form valid trees and won't appear as selectable scope entries. Fix the hierarchy data to see more leaders.

Suppressed Values ("—")

A **"—"** in any cell means the group for that combination (e.g., a specific Job Function × App) falls below the **minimum group size threshold** (default 10). This is privacy protection working as designed — not an error. To see data for smaller groups, the admin can reduce the minimum group size (minimum 5) in Privacy Settings, subject to organisational privacy policies.

Agent-Related Insight Cards on the Adoption Page (Preview)

In addition to the core Adoption insights, the Adoption page now surfaces two **agent-focused insight cards** when your tenant has agent activity. These cards are independent of the Agent Dashboard itself and are visible to anyone who can view the Adoption page.

Card	What It Shows
Agent adoption by Copilot users (preview)	Number of Copilot users who have used at least one agent, number of
Credit usage overview	Copilot Credits consumed by Copilot Chat users, number of agents tho

Why these matter even without opening the Agent Dashboard: Both cards live on the regular Adoption page, so leaders who never visit the Agent Dashboard can still see *whether* agents are being used and *whether* they cost money. The **Agent adoption by Copilot users** card is the easiest way for a CIO to answer “are people actually trying our agents yet?”. The **Credit usage overview** card is the first place to spot a runaway PAYG bill before it shows up in the billing report.

Known Metric Underreporting Periods

Microsoft has acknowledged two data collection issues that caused underreporting on the dashboard. No customer action is needed — data auto-corrects for periods after the affected windows.

Affected Metrics	Affected Period	Impact
Email features (Generate email draft, Summarize email thread)	June 1, 2025 – February 18, 2026	Outlook active
Meeting features (Meeting summaries, Intelligent Recap)	September 6 – November 3, 2025	Teams meeting

If you see unexpectedly low Outlook or Teams metrics for these periods, the underreporting is the cause — not a configuration issue. The dashboard may display a yellow warning banner for the email issue.

Impact Page

Shows four top-level metrics: **Copilot Actions Taken**, **Copilot Assisted Hours**, **Copilot Assisted Value**, and **Satisfaction Rate**. This is the primary ROI and impact measurement page. A six-month trendline shows weekly snapshots of each metric (selectable via the Metric dropdown). Each metric is calculated over a **28-day rolling window** with up to a 6-day data delay.

NOTE: Satisfaction Rate (New Metric)

The **Satisfaction Rate** card shows the percentage of positive reactions (thumbs up) out of all reactions (thumbs up + thumbs down) that users have provided for Copilot responses across Microsoft 365 apps. It is calculated over a rolling 28-day period and provides a built-in sentiment signal without requiring a survey upload.

NOTE: Copilot Assisted Hours Calculation (Corrected)

Assisted Hours is composed of three categories:

Category	What's counted
Meeting Summaries	Duration of each meeting summarized or recapped by Copilot. If a user both summarizes mid-
Search & Summaries	Copilot Chat (work) prompts, Summarize email/Word/PPT actions, Excel analysis, Chat in Word
Content Creation	Draft email, Draft in Word, Create presentation, Rewrite text actions

Assisted Value = Assisted Hours × Hourly Rate (default \$72/hour, configurable)

These are broad approximations based on best available research. Microsoft may update the methodology.

Sentiment Section (within Impact Page)

Located within the Impact page, the Sentiment section displays your organisation's survey results alongside Microsoft's benchmark data from early Copilot users. It shows:

- **Sentiment results by question** — Your org's response to each of the four recommended Copilot questions, compared to Microsoft's benchmark percentages. Results can come from Viva Glint, Viva Pulse, or CSV upload. If multiple sources exist, a **Survey** toggle lets you switch between them.
- **Sentiment results by group** (Viva Insights customers only) — A heat map showing sentiment breakdown across organisational attributes (department, location, job function). Enables leaders to identify which groups are thriving with Copilot vs which need more support.
- **Manager team view** — Managers see results from their own team only (for Pulse, Glint, and CSV user-level uploads). They can also see aggregated tenant-level results.

No survey data? The Sentiment section shows "No survey responses available" until you configure one of the options in Section 5.5. The **Satisfaction Rate** metric (thumbs up/down) on the Impact page works independently and does not require survey configuration.

See Section 5.5 for the end-to-end setup guide for each survey option.

5.6 How to Delegate Access (For Dashboard Users)

Method 1 — Via Settings: Viva Insights web app → Settings → Delegation → Add delegates.

Method 2 — Via Dashboard: On Copilot Dashboard page → Share → Add delegates.

Delegation Limits:

- Maximum 75 delegates per person
- Delegates cannot delegate to others (no cascading)
- If delegator loses access (or leaves the org), all their delegates also lose access. **Recovery:** Another user with dashboard access must re-delegate to the affected people. Use Purview audit logs (Section 10.6 — search for `RemoveDelegates`) to identify who was affected. **Prevention:** Ensure at least 2–3 people have direct dashboard access (not just delegated) to avoid single points of failure.
- Senior leaders can assign scope: *Your group* (reports) OR *Your company* (all employees)
- Agent Dashboard requires "Your company" scope for delegates

5.7 Success Criteria

☐ Can access Copilot Dashboard at `https://analysis.insights.cloud.microsoft`

☐ Readiness page displays license assignment data

☐ Adoption page shows active user trends

☐ Impact page displays Copilot Assisted Hours and Value metrics

☐ Group-level filtering works (if org data uploaded)

☐ Manager settings enabled and managers can see team-level data

☐ Minimum group size is configured appropriately

☐ Hourly rate is configured for your organisation

☐ Exclusion list configured (if required for compliance)

5.8 Limitations

- No user-level detail (privacy thresholds aggregate to groups)
- No before/after adoption comparison
- 28-day rolling window limits historical trend analysis
- **No dynamic drill-down through management layers** — the dashboard filters by organisation/department using org data attributes, but does not support drilling from VP → Director → Manager. For manager-level team views, enable Manager Settings (Section 5.3 Step 5). For custom hierarchical reporting, use Power BI templates in Tier 5.
- Limited export capabilities

- Sentiment filters/heat maps require Viva license or CSV upload

5.9 References

- Microsoft Copilot Dashboard
- Manage dashboard settings
- Delegate access
- Configure Manager Settings
- Feature access management

6. Dashboard 3: Copilot Analytics Reports

6.1 When to Use

- Leaders want **targeted, out-of-the-box insights** beyond the Copilot Dashboard summary pages
- Analysts need pre-built reports they can share with business stakeholders without building custom queries
- Organization wants deeper collaboration insights alongside Copilot adoption data

6.2 What Are Copilot Analytics Reports?

Copilot Analytics Reports are a set of ready-to-use reports available inside the Viva Insights web app under **Reports** in the left navigation. They provide a variety of targeted insights about adoption and impact of Copilot across the organization, including both Copilot-specific and broader employee collaboration patterns.

6.3 Prerequisites

To view these reports, you must meet **at least one** of the following:

1. You have automatic access to the Copilot Dashboard based on Entra ID data, or you are an enabled manager
2. You have been given delegate access to the Copilot Dashboard
3. You are a **Viva Insights Analyst** with global partition access
4. You are a Microsoft 365 Global Administrator

NOTE: No Additional Setup Required

If you have already set up the Copilot Dashboard (Section 5), Copilot Analytics Reports are automatically available. No additional configuration is needed.

6.4 How to Access

Accessing Copilot Analytics Reports

1. Navigate to the Viva Insights web app: `https://analysis.insights.cloud.microsoft`
2. In the left navigation, select **Reports**
3. Browse available reports — these include out-of-the-box reports and any reports published by analysts

6.5 Available Report Types

Copilot Analytics Reports fall into two categories in the Viva Insights web app:

A. Out-of-the-Box Reports (for Leaders & Managers)

Pre-built reports that cannot be customised with unique filters or attributes. Select **View report** to see insights.

Report	What It Shows
Copilot Studio Agents	Adoption and impact of custom agents — top agents, agent-assisted hours, individual e
Copilot for Sales Adoption	Usage of Copilot for Sales across the org — which actions contribute to sales tasks, use

B. Shared Reports (Analyst-Published)

Reports created by Insights Analysts and shared with leaders, managers, and delegates. These appear with a **"Shared"** label. Recipients can view but not customise them.

Shared reports can be any Power BI report within Viva Insights, or a custom report that includes Viva Insights metrics, survey data, or Copilot metrics.

C. Advanced Power BI Report Templates (for Analysts)

Pre-configured templates that analysts run as queries, then connect to Power BI for full customisation.

Template	Purpose
M365 Copilot Impact	Primary ROI report — assisted hours, before/after adoption, Copilot vs non-Copilot
M365 Copilot Adoption	Detailed adoption patterns — usage trends, feature adoption, group comparison
Copilot Business Impact	Correlate Copilot usage with business outcomes (sales, CSAT, etc.)
Copilot Studio Agents (Advanced)	Agent-specific impact — assisted hours, session outcomes, Copilot Credits, etc.
Copilot Employee Experience (Glint)	Combine Copilot usage with Viva Glint survey data for employee experience insights

Which Template Should I Use? — Decision Guide

Stakeholder Question	Recommended Template	Why
"Is Copilot paying for itself?"	Copilot Impact	Assisted hours
"Which teams are using Copilot?"	Copilot Adoption	Usage trends
"Give me quick executive talking points"	Copilot Headlines (preview)	Auto-generated
"Did Copilot actually improve our sales/HR/operations outcomes?"	Copilot Business Impact	Correlation
"How do our Copilot Studio agents perform?"	Copilot Studio Agents	Agent-specific
"What do employees actually think about Copilot?"	Copilot Employee Experience (Glint)	Combining
"The standard reports are too high-level"	Custom Person Query	Select filter

6.6 Prerequisites for Accessing Reports

For Viewing Out-of-the-Box & Shared Reports

You must meet **at least one** of the following:

- 1. Automatic access to the Copilot Dashboard based on Entra ID data, or enabled as a manager via Manager Settings
- 2. Delegate access to the Copilot Dashboard (Learn how)
- 3. **Insights Analyst** role with global partition access
- 4. Microsoft 365 Global Administrator

For Creating Advanced Power BI Reports (Analyst Templates)

Prerequisite	Details
Insights Analyst role	Assigned by Global Admin or Insights Admin (Assign roles)
Power BI Desktop	December 2022 or newer (free download: Get Power BI)
Viva Insights licence	Assigned to the measured population (included with Copilot licences)
Copilot licence	Assigned to employees whose Copilot activity you want to analyse
Partition access	Analyst must have access to the correct data partition (usually Global)
Org data uploaded	Required for group-by and filtering in reports (see Section 9)

NOTE: No Reports Visible?

If you see "No reports available", either: (a) no out-of-the-box reports are enabled for your tenant, or (b) no analyst has published shared reports to you. Contact your Insights Administrator to assign someone the Insights Analyst role so they can create and publish reports.

6.7 Step-by-Step: How to Create & Publish Reports

Step 1: Access Copilot Analytics Reports (Leaders/Managers)

- 1. Sign in to `https://analysis.insights.cloud.microsoft`
- 2. Select **Reports** in the left navigation
- 3. Browse **Out-of-the-box** reports (e.g., Copilot Studio Agents, Copilot for Sales)
- 4. Select **View report** on any card to see the insights
- 5. Look for **Shared** reports published by your analysts

Step 2: Create an Advanced Report Using a Template (Analysts)

1. Sign in to the analyst experience at <https://analysis.insights.viva.office.com>
2. Select **Create analysis**
3. Under **Templates**, browse the **Copilot** section
4. Select the desired template (e.g., **Copilot Impact → Set up analysis**)
5. Configure **Query setup**: name, time period (up to 13 months), auto-refresh, description
6. Review **Predefined metrics** (grey tags = required). Add extra metrics if needed
7. Set **Employee filters** (keep "Is Active"; add department/function filters as needed)
8. Add up to **20 organisational attributes** for group-by/filter options in the report
9. Select **Run** — the query may take minutes to hours

Tip: Use the Copilot assistant in Viva Insights to help choose metrics and filters. [Learn more](#)

Step 3: Connect Power BI to Query Results

1. Once the query completes, go to **Analysis results**
2. Download the **.pbix template file**
3. Open in Power BI Desktop → paste **partition ID** and **query ID**
4. Set **Minimum group size** → select **Load**
5. Sign in with your **Organisational account**
6. Configure report Settings: time period, group-by attribute, active user definition

Step 4: Publish Report to Leaders (Analysts)

1. While viewing the report in Viva Insights, select **Publish**
2. Create the card: set **title**, **publisher name**, **description**
3. Choose data access model:
 - **Unfiltered original report** — publishes as-is to people with Copilot Dashboard access
 - **Filter by manager hierarchy** — recipients see only their team's data (for enabled managers)
4. Set **expiry date** (up to 365 days)
5. Select **Publish** — recipients get an email notification and can view via the Reports tab

Report expiry: Published reports expire on the date you set (max 365 days). Recipients are **not** automatically notified before expiry. Set a calendar reminder to re-publish before the expiry date. If the publishing analyst leaves the organisation, see Section 8.5 — Analyst Departure for transfer guidance.

Doc: Publish reports feature

6.8 Relationship to Other Tiers

- Copilot Analytics Reports **complement** the Copilot Dashboard — the Dashboard provides summary views; these Reports provide deeper drill-downs
- Analysts can publish collaboration insights through the **Publish reports** feature, making them available alongside Copilot insights
- Reports use the same organizational data and privacy settings as the Copilot Dashboard
- Advanced Power BI templates in Section 8 use the same analyst workflow described here

6.9 Success Criteria

- ☐ Can navigate to Reports in the Viva Insights web app
- ☐ Out-of-the-box Copilot reports are visible and populated
- ☐ Analyst can create a query using a Copilot template and connect to Power BI
- ☐ Analyst can publish a report that appears for leaders under Shared reports
- ☐ Leaders receive email notification and can view published reports

7. Dashboard 4: Agent Dashboard

PREVIEW: Agent Dashboard

The Agent Dashboard is currently in public preview. Features may change before general availability. See the "Previews" section of the Microsoft Products and Services Data Protection Addendum for more information on personal data processing during previews.

7.1 When to Use This Dashboard

- Organization is deploying **Copilot agents** (via Copilot Studio, in-app agents, or third-party agents)
- Leaders want to understand agent adoption, active users, and usage trends
- Need to identify which agents are being used most and by whom
- Track agent adoption over time to optimize deployment

7.2 Prerequisites

Requirement	Details
Copilot/Viva Insights Licenses	50+ assigned Copilot or Viva Insights licenses (same threshold as Copilot Dashboard)
Viva Insights Web App	Must be enabled (Agent Dashboard is on by default as part of the web app)
Access	Company-level dashboard access (senior leaders, company-scope delegates, Insight

IMPORTANT: Team-Level Access Not Available for Agent Dashboard

Unlike the Copilot Dashboard, managers **cannot** access a team-level view in the Agent Dashboard, nor can they delegate team-level access. To enable delegates' access to the Agent Dashboard, you must assign "Your company" scope (not "Your group") when delegating.

7.3 How to Access

Accessing the Agent Dashboard

1. Navigate to the Viva Insights web app: `https://analysis.insights.cloud.microsoft`
2. Select **Agent Dashboard** from the left navigation
3. If you don't see it, verify your access level (must be company-level access)

7.4 What the Agent Dashboard Shows

The Agent Dashboard focuses exclusively on **agent adoption and usage**. Unlike the Copilot Dashboard (which tracks Copilot across all M365 apps and includes ROI/sentiment), the Agent Dashboard answers a different set of questions: *which agents are being used, by whom, how often, and are users coming back?*

Key Metrics

Metric	What It Measures
Active agents	Number of agents with at least one active user in the last 28 days
Active users	Unique users with at least one agent response in the last 28 days
Agent responses	Total number of times agents responded to users
Returning users	Users active in both the current and previous 28-day period (stickiness metric)
% of Copilot users using agents	Adoption penetration — what fraction of your Copilot users are also engaging with
Copilot Credits	Credits consumed by agents (visible when Pay-As-You-Go is enabled)

Unique Insights

- **Most popular agent:** The agent with the highest number of active users
- **Most versatile agent:** The agent used across the most job functions (requires Job Function data)
- **Most shared agent:** Among user-built agents, the one with the widest reach
- **Agent deep-dive pages:** Click into any agent to see its individual adoption trends, response counts, and user breakdown by group

Agent-Specific Filters (Unique to This Dashboard)

Filter	Options
Agent creator type	User Your org Microsoft Microsoft partner
Agent source	Agent Builder Microsoft Copilot Studio SharePoint Microsoft 365 Agents Toolkit Other Micr

Data Sources

Same three sources as the Copilot Dashboard: Entra ID (default), M365 Admin Center org data upload, or Viva Insights org data upload.

7.5 When to Use the Agent Dashboard — Practical Scenarios

Scenario 1: Post-Launch Agent Adoption Review

Your organisation just deployed three Copilot Studio agents (HR FAQ bot, IT Helpdesk agent, Sales proposal assistant). After 4 weeks, the CIO wants to know: "Are people actually using them?"

Use the Agent Dashboard to: Compare active users across all three agents. Check returning users to see if usage is sticky or if people tried once and stopped. Use the agent deep-dive pages to see which departments adopted each agent. If the IT Helpdesk agent has high usage but low returning users, it may indicate the agent is not resolving issues effectively.

Scenario 2: Cost Governance for Pay-As-You-Go Agents

Your organisation enabled Pay-As-You-Go billing for Copilot agents. Finance wants to understand the credit consumption pattern before the next budget cycle.

Use the Agent Dashboard to: Filter by Copilot Chat licence type to see credit-consuming agents. Review the Copilot Credits metric per agent to identify high-cost agents. Cross-reference with the Admin Center Copilot Credits report for per-user and per-billing-policy breakdowns. Use this data to decide which agents justify the spend and which need optimisation or retirement.

Scenario 3: Identifying Shadow AI / Ungoverned Agents

Your IT governance team suspects employees are building and sharing agents without oversight.

Use the Agent Dashboard to: Filter by **Agent creator type = User** to see all end-user-built agents. Sort by active users to find the most widely used ones. Check the *Most shared* insight to surface user-built agents that have grown beyond a single team. Work with your admin team to decide whether popular user-built agents should be formally published through your organisation's app catalogue with proper governance.

7.6 Detect → Act: From Agent Dashboard to Agent Governance

The Agent Dashboard is your **detection** layer. When you spot an agent that needs attention, here's how to act on it immediately — without leaving the M365 Admin Center.

IMPORTANT: The Detect → Act Workflow

Step	Where	Action
1. Detect	Viva Insights → Agent Dashboard	Identify the agent: filter by Creator Type, sort by active users
2. Decide	Your governance process	Determine the action: approve and formalise, block, or n
3. Act — Quick	M365 Admin Center → Copilot → Agents	Block the agent immediately, review its permissions, or a
4. Act — Policy	Power Platform Admin Center	Set DLP policies to prevent recurrence: block specific co

Agent Governance Quick Actions (M365 Admin Center)

These actions can be taken by the **AI Administrator** or **Global Admin** directly in the M365 Admin Center.

Action	Navigation	What It Does
Review agent inventory	Admin Center → Settings → Copilot → Agents	View all agents previously us
Block a specific agent	Agents section → Select agent → Block	Prevents the agent from bei
Approve for org catalogue	Agents section → Select agent → Approve	Makes the agent available on
Review agent access policies	Admin Center → Settings → Copilot → Agent policies	Set tenant-wide policies for

TIP: For Advanced Governance

The quick actions above handle immediate response. For **preventive governance** — DLP policies, environment-level controls, agent sharing limits, publishing approval workflows, and Purview integration — see the **Copilot & Agent Governance** project (separate documentation).

7.7 Admin Configuration

Enable/Disable the Agent Dashboard

The Agent Dashboard is **on by default**. To disable:

Via M365 Admin Center:

1. Go to **Settings → Microsoft Viva → Viva Insights → Set up and management**
2. Under **Access Management**, select **Turn Advanced Insights on or off**
3. Select **Agent Dashboard → Add policy** to disable

Via PowerShell (VFAM):

```
Add-VivaModuleFeaturePolicy -ModuleId VivaInsights -FeatureId AgentDashboard -Name DisableFeatureForAll -IsFeatureEnabled
```

AI admins can set policies at tenant, group, or user level. Both the Viva Insights web app control *and* the Agent Dashboard control must be enabled for access.

Minimum Group Size

Uses the same minimum group size setting as the Copilot Dashboard. Default is 10; minimum is 5. See Section 5, Step 6 for configuration steps.

NOTE: PBI Templates vs Raw Query Export — Group Size Behaviour

Power BI template reports enforce the minimum group size at the visualisation layer — groups below the threshold show suppressed data (N/A). Moving from the Dashboard to Power BI does **not** bypass this privacy control.

Raw query exports (Analysis results → Download CSV) contain individual-level de-identified data. An analyst can aggregate this data themselves in Power BI and build custom visuals with finer granularity. However, the analyst is responsible for enforcing privacy thresholds per your organisation's data handling policy.

7.8 Delegate Access for Agent Dashboard

If you have company-level access to the dashboards, you can delegate access. However:

- Delegates must be given **"Your company"** scope to access the Agent Dashboard
- Delegates with **"Your group"** scope can see the Copilot Dashboard team view but **not** the Agent Dashboard
- To update existing delegates: go to **Delegation settings** → Edit → change scope from "Your group" to "Your company"

7.9 Success Criteria

- ❑ Agent Dashboard is visible in the Viva Insights web app navigation
- ❑ Adoption page shows agent activity data for the last 28 days
- ❑ Organization/Job Function filters work (if org data uploaded)
- ❑ Individual agent drill-downs are accessible
- ❑ Delegates with "Your company" scope can access the Agent Dashboard

7.10 Limitations

- Preview feature — may change before GA
- No team-level/manager view (company-level only)
- No ROI or impact metrics (adoption focus only)
- Not available in GCC environments

7.11 References

- Agent Dashboard documentation
- Manage Agent Dashboard settings
- Delegate access (including Agent Dashboard scope)
- M365 Copilot Agents Admin Guide
- Copilot Control System — Agent Lifecycle

8. Dashboard 5: Viva Insights Advanced Analytics (Power BI)

8.1 When to Use This Dashboard

- You need before/after adoption comparison (Copilot users vs. baseline)
- Analysts require custom cohort segmentation (by department, role, location)
- Compare Copilot users' behavioural patterns against non-Copilot users
- Need full Power BI export and visualization capabilities
- Your organisation has dedicated analysts to maintain and interpret reports
- Historical data beyond 28-day rolling window is required

NOTE: Other Usage Data Sources

Some organisations use **M365 Audit Logs (Purview)** or the **Microsoft 365 Usage Analytics** content pack for per-app usage telemetry. These are separate data pipelines from Viva Insights — they provide app-level interaction data but lack the ROI calculations (Assisted Hours/Value), behavioural comparisons, and privacy aggregation that Viva Insights provides. Community-built Power BI dashboards using Purview audit data exist but are not covered by this guide.

8.2 Prerequisites

Licensing Requirements

Requirement	Details
Viva Insights Licence	Required: 50+ assigned Viva Insights licences for advanced analysis. Copilot licence
Microsoft 365 Copilot Licence	Required for Copilot usage data (assigned to the users whose Copilot activity you wa
Power BI Desktop	Version June 2022 or newer (free download)

IMPORTANT: Licensing Clarification (Corrected from v2.0)

v2.0 of this guide stated that Advanced Analytics requires "BOTH Copilot licenses AND Viva Insights licenses" as separate purchases. This was incorrect.

Correction: Every M365 Copilot licence **automatically includes** the Viva Insights service plan. 50 Copilot licences alone satisfy the Viva Insights licence requirement for Advanced Analysis. A separate Viva Insights add-on purchase is only needed if you want to analyse employees who do *not* have Copilot licences.

Role Requirements

Role	Assigned By	Purpose
Insights Analyst	Global Admin or Insights Admin	Access to create and run queries
Partition Access	Insights Admin	Access to relevant employee partitions

IMPORTANT: Insights Admin ≠ Insights Analyst

These are **two separate roles** that serve different purposes. Having the **Insights Admin** role lets you configure settings (org data, privacy, manager settings, partitions) but does **NOT** let you create or run queries. For that, the user also needs the **Insights Analyst** role.

Common confusion: An Insights Admin opens the Viva Insights web app and sees the Admin panel with settings — but sees no option to "Create analysis". They assume something is broken. In reality, the Create analysis button only appears for users with the Insights Analyst role. If one person needs to do both admin and analysis tasks, assign **both** roles.

Error you may see: If the tenant has fewer than 50 assigned Viva Insights / Copilot licences, the Admin page will display: *"Viva Insights is below the minimum assigned licence requirement for this experience."* This means the tenant has not met the 50-licence threshold — resolve by assigning more Copilot licences (which include Viva Insights) or standalone Viva Insights licences. See Section 10 Troubleshooting for the full resolution path.

Data Requirements

Requirement	Details	Impact if Missing
Organizational Data Upload	HR attributes: Department, Job Function, Location, Level	Only tenant-level views; no
Pre-Adoption Data	4 weeks of activity before Copilot rollout	Cannot perform before/afte
Post-Adoption Data	4 weeks of activity after Copilot rollout	Insufficient data for impact
User Adoption Dates	Ability to identify when each user got Copilot	Cannot accurately segment

WARNING: Plan Ahead

Before/after analysis requires 4 weeks of pre-adoption baseline data. If Copilot has already been rolled out, this historical comparison may not be possible. Identify this early.

8.3 Step-by-Step Implementation

Estimated Time: 4–8 hours active + query runtime + ongoing maintenance

Step 1: Assign Insights Analyst Role (15 min)

- 1. Identify the analyst(s) who will manage reports
- 2. In M365 Admin Center: **Settings → Viva → Viva Insights → Add-on Plan → Insights Analyst**
- 3. Add users → Save
- 4. Wait 1–2 hours for permissions to propagate

Step 2: Configure Partition Access (15 min)

A **partition** defines which employees an analyst can query. Most tenants have a default **Global** partition covering all employees. Multi-agency or multi-BU tenants may have separate partitions per agency.

To assign an analyst to an existing partition:

1. Navigate to `https://analysis.insights.cloud.microsoft`
2. Go to **Admin** → **Privacy settings** → **Partitions**
3. Select the partition (usually **Global**) → click **Edit**
4. Under the **Analysts** tab, select **Add analysts**
5. Search for the Insights Analyst by name or email → select → **Save**
6. The analyst can access this partition's data within 1–2 hours

To create a new partition (for multi-agency isolation):

1. On the Partitions page, select **New partition**
2. Name the partition (e.g., "Agency A")
3. Set the filter: choose an org data attribute (e.g., `Agency = "Agency A"` if using CSV upload, or `Domain = "agencya.gov.au"` if using Entra ID Domain-based isolation)
4. Assign analysts → **Save**
5. Repeat for each agency/BU

Reference: Manage partitions in Viva Insights

Step 3: Upload Organizational Data (30–60 min)

See Section 9: Organizational Data Reference. Ensure data includes EffectiveDate set earlier than upload.

Step 4: Install Power BI Desktop (15 min)

1. Download from `https://powerbi.microsoft.com/desktop/`
2. Install version June 2022 or newer
3. Sign in with an account that has Insights Analyst role

8.3.1 Available Copilot Power BI Templates

Before creating a query, choose the right template for your analysis goal:

Template	Purpose	Key Analysis
Microsoft 365 Copilot Impact	Primary Copilot ROI report	Assisted hours, before/after ado
Copilot Business Impact	Correlate Copilot usage with business outcomes	Requires uploading business dat
Copilot Studio Agents	Agent-specific impact and cost analysis	Agent assisted hours, knowledg

For broader collaboration analysis (not Copilot-specific), additional templates include: Ways of Working, Manager Effectiveness, and Wellbeing. These use the same analyst workflow but draw on different metrics.

Step 5: Create a Report Using a Built-in Template (30-45 min)

This walkthrough uses the **Copilot Impact** template as an example. The same workflow applies to all templates.

1. Sign in to the Viva Insights analyst experience at <https://analysis.insights.viva.office.com>
2. Select **Create analysis**
3. Under **Templates**, navigate to the **Copilot** section and select **Microsoft 365 Copilot impact → Set up analysis**
4. Under **Query setup**:
 - **Query name**: Enter a descriptive name (e.g., "Copilot Impact Q1 2026")
 - **Time period**: Select from Last 1 month, Last 3 months, Last 6 months, or Custom date range. Copilot metrics are available for up to 13 months of historical data. For before/after analysis, ensure the range includes the period when Copilot was first deployed.
 - **Auto-refresh** (optional): Check this box to have the query automatically re-run when new data arrives
 - **Description** (optional): Add context for future reference
5. Under **Predefined template metrics**: Review the pre-selected metrics (shown as grey tags — you cannot remove these). Optionally add more metrics by selecting **Add metrics**
6. Under **Select which employees you want to include**: Add filters to narrow the population. Keep the predefined "Is Active" filter. Use org attributes to scope (e.g., Department = "Sales" if you want a sales-only report)
7. Under **Select which employee attributes you want to include**: Add up to 20 organisational attributes. These become your group-by and filter options in the Power BI report. Pre-selected attributes (grey) are required; blue attributes are recommended but removable
8. Select **Run** in the upper right. The query may take minutes to hours depending on population size

NOTE: Data Quality Warnings

If you see yellow warnings on attributes, the data quality is low. Red warnings with the Run button disabled mean the attribute is missing from your org data entirely. Resolve these by updating your org data upload before running the query.

Step 6: Connect Power BI to Query Results (20 min)

1. Once the query completes, download the **.pbit template file** from the query results page
2. Open the downloaded template in Power BI Desktop
3. When prompted:
 - Paste in the **partition identifier** and **query identifier** (shown on the results page)
 - Set the **Minimum group size** for data aggregation (must match your organisation's privacy policy)
4. Select **Load** to import the query results
5. Sign in using your **Organisational account** (the same account you use for Viva Insights). You may need to sign in more than once
6. Wait for Power BI to load and prepare the data (may take several minutes for large datasets)

Step 7: Configure Report Settings & Explore (30-60 min)

Once the report loads, configure the Settings page (accessible from the right panel or the Settings icon on any page):

1. **Time period:** Select the date range you want the report to display
2. **Group by:** Choose the primary group-by attribute (e.g., Organisation, Department). This applies across all report pages
3. **Filters** (optional): Select org attributes and values to filter the employees shown
4. **Customise active Copilot user definition:** Choose between:
 - At least one active day in the selected time period
 - At least one active day per four weeks
 - At least one active day per week
5. **Report language:** Change if needed

Explore the report pages:

- **Summary page:** Active Copilot users, total actions, Assisted Hours overview, with cards for Meetings, Email, Teams Chat, Documents, and Copilot Chat (work)
- **Per-section deep-dives** (each section has 3 analysis views):
 - *Before vs. after adoption:* How collaboration behaviour changed after employees started using Copilot
 - *Copilot vs. non-Copilot users across groups:* Compare active Copilot users against non-users by department, function, etc.
 - *Two-group comparison:* Compare two custom cohorts of employees side by side
- **Research insights page:** Links to Microsoft research on Copilot adoption and impact

WARNING: Before/After Analysis Requires Full Date Range

To accurately capture the first time employees began using Copilot, ensure your query time period extends back to when your organisation first enabled Copilot. For example, if Copilot was enabled in January 2025, include data from January 2025 onwards.

8.4 Success Criteria

- ☐ Insights Analyst role assigned and accessible

- ☐ Organizational data uploaded and processed
- ☐ Copilot Impact query created and executed successfully
- ☐ Power BI Desktop connected to OData feed
- ☐ Template report loads with data
- ☐ Before/after adoption comparison is visible
- ☐ Custom segmentation filters work
- ☐ Analyst understands how to refresh and modify reports

8.5 Ongoing Maintenance & Operationalisation

- Refresh organizational data monthly (or when org changes occur)
- Re-run queries periodically to capture updated data
- Update Power BI reports when Microsoft releases template updates
- Share reports with leaders and managers via **Publish Reports** (see Section 6.7 Step 4) or by sharing the Power BI workspace directly

Analyst Departure — Query & Report Transfer

If an Insights Analyst leaves the organisation, their queries and published reports require attention:

Asset	What Happens
Completed query results	Results persist in the Viva Insights platform and remain accessible to other analysts
Scheduled/recurring queries	Queries created by the departed analyst may stop running when their account expires
Published reports (Publish Reports)	Published reports have an expiry date (up to 365 days). If the publisher’s account expires, reports are removed
Power BI reports (.pbix files)	Local .pbix files are on the analyst’s machine. Power BI Service reports are in the cloud
Partition access	Access is per-user and is removed when the account is deleted

WARNING: Plan for Analyst Transitions

Always have at least two analysts with partition access. Store .pbix files in a shared workspace, not on individual machines. Document query schedules so they can be recreated if needed.

Suggested Steady-State Review Cadence

Once all tiers are operational, suggest the following review rhythm:

Cadence	Who	What to Review
Weekly	IT Admin	Licence utilisation, inactive users for reallocation
Fortnightly	Business Leaders / Managers	Copilot Assisted Hours & Value trends, adoption by group, sentiment sl
Monthly	Business Leaders	Copilot Analytics Reports for deeper drill-downs; agent adoption (if app
Quarterly	Analysts + Exec Sponsor	Before/after cohort analysis, ROI report for board deck, refresh org dat

Leaders should use the **Copilot Dashboard Impact page** as their primary “at a glance” view, supplemented by Copilot Analytics Reports for targeted questions. Advanced Analytics Power BI reports are best suited for quarterly deep-dives and executive presentations.

8.6 References

- Copilot Impact Report (Power BI)
- Copilot Business Impact Report
- Setup Advanced Reporting
- Assign roles
- Copilot Advanced Analytics Playbook

9. Organizational Data Reference (Consolidated)

This section consolidates organizational data guidance for all tiers. Upload once; the data serves the Copilot Dashboard, Analytics Reports, Agent Dashboard, and Advanced Analytics.

IMPORTANT: Organizational Data Upload Migration (April 2026)

Microsoft is migrating all tenants from the Viva Insights web app to the **M365 Admin Center** as the single upload point for organizational data. This migration is happening in waves — your tenant admin will receive a Message Center notification before your transition.

- **By mid-2026, all tenants will be migrated.** After migration, you can no longer upload org data through the Viva Insights web app.
- The new platform is called **Organizational Data in Microsoft 365** and is accessed at: `admin.microsoft.com` → Setup → Migration and imports → Organizational Data in Microsoft 365.
- A new role — **Organizational Data Source Administrator** — manages uploads. Assign this role to whoever currently uploads org data.
- The new platform also supports **HRIS connectors** (SAP SuccessFactors, Workday), **Azure Blob Storage**, and **API-based import** — eliminating manual CSV uploads for many organisations.
- Data uploaded via this platform can serve **multiple M365 apps** (Copilot Dashboard, Viva Insights, M365 User Profile, People Skills) — not just Viva Insights.

The guidance below covers both the **current** (Viva Insights web app) and **new** (M365 Admin Center) upload paths. If your tenant has already been migrated, follow the M365 Admin Center path.

9.1 Why Upload Org Data? (Entra ID vs. Org Data Upload)

A common question: *“We already have Department, Manager, and Organisation in Entra ID — why do we need to upload a CSV?”*

Entra ID provides a baseline, but org data uploads unlock significantly more analytics capability:

Capability	Entra ID Only
Department filter on dashboard	Yes (Entra ID “Department” attribute)
Job Function / Job Discipline filter	No
Location filter	No
Level / Seniority filter	No
Custom attributes (Cost Centre, Agency, BU, Region)	No
Multi-agency / multi-BU partitioning	Yes — if each agency has a distinct email domain, use the syst
Before/after cohort segmentation in Power BI	No segmentation
Manager hierarchy accuracy	Depends on Entra ID completeness
Data freshness control	Updated by directory team (often delayed)

TIP: When Entra ID Alone Is Sufficient

If you **only** need the Copilot Dashboard with tenant-level views and Department filtering — and the Entra ID Department attribute is accurate and consistently populated — you can skip the org data upload. However, if you need **any** of the following, org data upload is required: Location or Job Function filters, custom attributes (Cost Centre, Agency), or before/after cohort analysis in Power BI. **Exception:** For multi-agency partitioning, if each agency has a distinct email domain, you can use the system-generated `Domain` attribute as a partition filter without uploading a CSV. See the *Multi-Agency Isolation Architecture* document, Section 4.1, for the full decision framework.

What Breaks with an Incomplete Entra ID Hierarchy?

If the Entra ID `Manager` attribute is missing or inconsistent for many users:

Feature	Impact
Auto CxO Identification (automatic dashboard access)	Fewer leaders are auto-identified. Users without a clear repo
Manager Settings (team-level data for managers)	Managers without a populated <code>Manager</code> attribute or without
Filter by manager hierarchy (Publish Reports)	Published reports with “Filter by manager hierarchy” will shov
Advanced Analytics cohort segmentation	If <code>ManagerId</code> is missing in org data and Entra ID, manager-b

Recommendation: Before deploying dashboards, run Section 5.3 Step 2 (Verify Entra ID Hierarchy). If more than 20% of users lack a Manager attribute, prioritise fixing directory data or supplement with an org data CSV upload that includes correct `ManagerId` values.

What Happens After Org Data Is Uploaded? (Reversal)

Once org data is uploaded, it **replaces Entra ID as the data source** for the uploaded attributes in dashboard filters. This means:

- Department values come from the CSV, not from Entra ID — even if they differ
- If you stop uploading, the data becomes stale (not reverted to Entra ID)
- **Reversal is now self-service:** You can use **parallel data ingestion** to keep Entra as the source for `ManagerId` and `Organization` while adding custom attributes via CSV. To stop using uploaded data entirely, clear the Entra connection selections or use the "Replace All data" option with a single dummy row. See Microsoft Learn.
- **Before uploading:** Confirm readiness to own the ongoing refresh cycle (monthly re-uploads recommended)

9.2 Upload Methods

Organizational data can reach Viva Insights and the Copilot Dashboard through several methods. Choose based on your HRIS system, automation needs, and technical capability:

Method	Who Manages	Status
Option A: CSV Upload — M365 Admin Center	Organizational Data Source Administrator or Global Admin	GA
Option B: CSV Upload — Viva Insights web app	Insights Administrator	Deprec
Option C: SAP SuccessFactors Connector	Global Admin + SAP SF Admin	GA
Option D: Workday Connector	Global Admin + Workday Admin	GA
Option E: Azure Blob Storage Connector	Global Admin + Data Engineer	GA
Option F: API-Based Import	Global Admin + Org Data Source Admin + Developer	Previe

NOTE: Choosing Between Options

- **Use SAP SuccessFactors (Option C) or Workday (Option D)** if your organisation runs either HRIS — eliminates manual CSV preparation entirely.
- **Use Azure Blob Storage (Option E)** if you want automated CSV drops from a data warehouse or Workday RaaS.
- **Use API-based import (Option F)** if you need incremental refresh (add new hires without full re-upload) or have a custom HRIS.
- **Use CSV upload (Option A)** for everything else — universal compatibility, lowest technical barrier.

For HRIS connector setup details, see: [SAP SuccessFactors](#) | [Workday](#) | [Azure Blob Storage](#) | [API-based import](#)

TIP: Bypass On-Premises AD for Viva Insights

If your HRIS data currently flows through a pipeline like **SAP SuccessFactors → middleware → on-premises AD → Entra ID**, be aware that Viva Insights only picks up 3 attributes from Entra (PersonId, ManagerId, Organization). Custom fields stored in Entra `extensionAttributes` (e.g., Business Unit in `extensionAttribute11`) are **not synced** to Viva Insights.

Solution: Use the SAP SuccessFactors or Workday connector (Options C/D) to send data **directly** from your HRIS to M365 — bypassing the on-premises AD pipeline entirely for Viva Insights purposes. This gives you access to all mapped attributes without relying on AD extension attributes.

NOTE: Merged Uploads

If multiple methods are used, the platform merges the uploads. In the M365 Admin Center, new uploads are **incremental by default** — they merge with existing data rather than replacing it.

9.2 Attribute Mapping

When uploading via the M365 Admin Center (post-migration), use the `Microsoft_*` attribute names. If still on the Viva Insights web app (pre-migration), use the legacy names.

Legacy Name (Viva Insights)	M365 Admin Center Name	Required?
PersonId	Microsoft_PersonEmail	Required
ManagerId	Microsoft_ManagerEmail	Required
Organization	Microsoft_Organization	Required
EffectiveDate	N/A — handled via date picker in M365 Admin Center UI	Required (Viva)
FunctionType	Microsoft_JobDiscipline	Optional (enable)
LevelDesignation	Microsoft_LevelDesignation	Optional (enable)
Location	Microsoft_CompanyOfficeLocation	Optional (enable)
HireDate	Microsoft_HireDate	Optional
HourlyRate	Microsoft_HourlyRate	Optional (configure)
Custom attributes (e.g., BusinessUnit)	Custom (same name)	Optional (up to 100)

9.3 Upload Steps (Option A — M365 Admin Center)

This is the **current primary path** for tenants that have been migrated to Organizational Data in Microsoft 365.

1. Ensure the **Organizational Data Source Administrator** role is assigned (Global Admin can assign this).
2. Prepare CSV: UTF-8 encoded, <1 GB (files >25 MB require SharePoint upload). Use `Microsoft_*` attribute names. **Do not** include an `EffectiveDate` column.
3. Ensure column headers use underscores (not spaces): e.g., `Employee_Name` not `Employee Name`.
4. Navigate to `admin.microsoft.com` → Setup → Migration and imports → Organizational Data in Microsoft 365 → Data Connections.
5. Select **Get started** (first upload) or **New import** (subsequent uploads).
6. Select apps to share data with (Viva Insights, Copilot Dashboard, M365 Profile, etc.).
7. Upload file, map reserved attributes, configure attribute access.
8. Validate and submit — processing takes a few hours, up to 3 days for full availability.

9.4 Upload Steps (Option B — Viva Insights Web App — Legacy)

DEPRECATED

This path is being retired. By mid-2026 all tenants will be migrated to the M365 Admin Center (Option A). Use this only if your tenant has not yet received a migration notification in Message Center.

1. Prepare CSV: UTF-8 encoded, <1 GB, include all required columns + custom attributes. Include `EffectiveDate` set earlier than upload date.
2. Navigate to `https://analysis.insights.cloud.microsoft` → Admin → Data hub → .csv upload → Start
3. Upload file, map fields to Viva Insights attributes
4. Validate and submit — wait up to 7 days for processing

9.5 Re-Upload & Maintenance

Org data maintenance depends on your upload method:

Method	Refresh Behaviour
M365 Admin Center (CSV)	Incremental merge — new uploads merge with existing data. To update a user, in
Viva Insights (CSV — legacy)	Full replacement — each upload completely replaces the previous dataset.
HRIS connectors (SF / Workday)	Automated — weekly or monthly sync configured during setup.
API-based import	Incremental or full — controlled via automation (ADF trigger, PowerShell cron, etc)

WARNING: Always Validate Before Uploading

There is **no automatic rollback** — if you upload bad data, filters will break until corrected data processes. Before uploading:

1. Open the CSV in a spreadsheet and verify column names match exactly (Section 9.2)
2. Confirm encoding is UTF-8 and file size is <1 GB
3. For M365 Admin Center: do **not** include `EffectiveDate` as a column (use the date picker in the UI instead)
4. For Viva Insights (legacy): include `EffectiveDate` set to a date **earlier** than today
5. Verify every employee has the required fields (`Microsoft_PersonEmail` , `Microsoft_ManagerEmail` , `Microsoft_Organization`)
6. Keep a copy of the previous CSV so you can re-upload it if needed

Recommended cadence: Re-upload org data **monthly** or whenever significant org changes occur. For HRIS connectors, set the sync frequency to weekly or monthly during setup. Set a calendar reminder for CSV-based

uploads.

9.6 Key Guidance

- Upload data for **every employee** to ensure Scope filters are accurate
- Do **not** upload a `TimeZone` column (will cause an error — TimeZone is system-generated)
- **M365 Admin Center:** Do not include `EffectiveDate` as a CSV column — use the date picker in the UI instead. Column headers must not contain spaces (use underscores).
- **Viva Insights (legacy):** Include `EffectiveDate` set to a date earlier than the upload date
- If using HRIS connectors (SAP SuccessFactors or Workday), consider whether custom attributes like `Agency` are available in your HRIS. If not, you may need to add custom fields in the HRIS before configuring the connector.
- Data uploaded via the M365 Admin Center can serve **multiple M365 apps** — not just Viva Insights. Attributes are classified as Public, Confidential, or Custom, with per-app access controls.
- By default, Entra ID data takes precedence over org data in the M365 User Profile. You can override this precedence if needed.

9.7 Data Freshness Monitoring

Org data has **no automatic staleness alerting** — if an upload fails or a connector sync stops, nobody gets notified. Use the monitoring points below to ensure data stays current.

Where to Check Data Freshness

Monitoring Point	Where	WI
Upload / connector status	M365 Admin Center → Setup → Organizational Data in M365 → Data Connections	St
Data freshness indicator	Viva Insights web app → Admin → Data hub	Gr
Attribute quality scores	Viva Insights → Organizational data → Data quality tab	Pe
Dashboard spot-check	Copilot Dashboard → Adoption page	Or

Signs of Stale Data

Symptom on Dashboard	Likely Cause
New employees don't appear in any group filter	They're not in the latest org data upload
"View by: Group" shows only one leader's name	Manager hierarchy is flat or broken — see Section 10.7
Department or Job Function filters show old values	Org data hasn't been refreshed since the last reorg
Employee counts don't match HR headcount	Missing rows in the CSV, or new hires added since last upload
Data hub shows ">30 days" since refresh	Upload cadence has lapsed — trigger a new upload immediately

Recommended Monitoring Cadence

Cadence	Task
After every upload	Check processing status and data quality scores
Weekly (HRIS connectors)	Verify last import date matches sync schedule
Monthly (CSV uploads)	Upload fresh data, verify "Success," check Data Quality tab
Monthly	Spot-check dashboard filters match current org chart
Quarterly	Full data quality audit — download manager completeness+log, verify tree count, check a

10. Troubleshooting Common Issues

10.1 Admin Center Reports

Issue	Possible Cause	Resolution
No data appearing	Less than 72 hours since first usage	Wait 72 hours
No data appearing	No users have Copilot licenses assigned	Verify license assignment
Cannot export CSV	Insufficient admin role	Request Reports Reader role
User details hidden	Privacy settings enabled	Check Reports → Settings → Display concealed
Data shows 0 active users	Users haven't used Copilot	Confirm users have accessed Copilot features

10.2 Viva Insights Dashboard & Analytics Reports

Issue	Possible Cause
Dashboard access denied	Copilot Dashboard VFAM pol
Dashboard access denied	AI Admin not added to acces
Dashboard access denied	Delegation VFAM policy restr
Dashboard access denied	Less than 2,500 users in tena
Impact page missing collaboration data	Behavioral Experiences polic
Only Readiness page visible	No Copilot licences assigned
"Viva Insights is below the minimum assigned licence requirement for this experience"	Tenant has fewer than 50 ass
No group-level filtering	Organizational data not uploa
Impact page shows no data	Less than 7 days since licens
Data suppressed (N/A)	Group size below privacy thre
Managers can't see team data	Manager Settings not enable
Sentiment page empty	No survey data uploaded, or
Exclusion list not working	Processing not complete
Org data not showing	Missing EffectiveDate or wro
Org data not showing	Upload still processing (withi
Org data not showing	Upload failed silently

10.3 Agent Dashboard

Issue	Possible Cause	Resolution
Agent Dashboard not visible	User only has "Your group" scope delegate access	Update delegate scope to "Your
Agent Dashboard disabled	VFAM policy disabling Agent Dashboard	Check AgentDashboard VFAM cc
No agent data	No agents deployed or no agent activity	Verify Copilot agents are deploye

10.4 Advanced Analytics (Power BI)

Issue	Possible Cause
“Viva Insights is below the minimum assigned licence requirement for this experience”	Fewer than 50 Viva Insights /
Cannot access analyst experience	Insights Analyst role not assigned
Can see Admin settings but no “Create analysis” button	User has Insights Admin role
Query returns no data	No users in selected partition
Query fails	Time period exceeds available data
Power BI won’t connect	Authentication issues
No segmentation options	Organizational data not uploaded
Before/after unavailable	No pre-adoption baseline data

10.5 Transient Errors & Service Issues

Issue	Possible Cause
Dashboard shows blank page or “Something went wrong”	Microsoft 365 service incident or temporary outage
Dashboard loads but data is stale or missing	Backend processing delay
Dashboard worked yesterday, broken today (no config change)	Browser cache or extension conflict
Intermittent “Access denied” errors	Token refresh issue or Entra ID sync delay
Power BI template fails to connect after working previously	Query expired or analyst session timed out

TIP: Before Escalating

Before engaging Microsoft Support, always check: (1) Service Health dashboard for known incidents, (2) Try InPrivate browser, (3) Verify VFAM policies haven't changed, (4) Confirm licences are still assigned. If none of these resolve the issue, escalate via Admin Center → Help and Support with tenant ID, screenshots, and timestamps.

10.6 Auditing Delegation Access

Use Microsoft Purview audit logs to track delegation:

Operation	Friendly Name	Description
AddDelegates	Added delegate access	User granted dashboard access to another user
RemoveDelegates	Removed delegate access	User revoked dashboard access from another user

TIP: Escalation Path

For issues not resolved by these steps, engage Microsoft Support via the Admin Center Help and Support section. Have tenant ID, license counts, and specific error messages ready.

10.7 Organizational Data & Hierarchy Issues

Data quality issues in the uploaded org data are the most common cause of dashboard display problems. Use this table to diagnose and fix.

Symptom	Root Cause
"View by: Group" shows only one leader with all users underneath	Flat hierarchy — most employees
Scope dropdown shows only one leader name instead of multiple senior leaders	Only one person has a clean top
Manager hierarchy tree count is thousands (e.g., 3,000+ trees for 1,000 employees)	Many ManagerEmail values re
"Microsoft_ManagerEmail doesn't meet data completeness"	Employees with blank or missin
Dashboard shows "—" for most Job Function or Organization cells	Groups fall below the minimum
Org data uploaded but dashboard still shows only Entra ID Department values	Upload is still processing, or up
Outlook or email-related adoption metrics seem unexpectedly low	Known Microsoft data issue: en
Meeting summary counts seem low for a specific period	Known Microsoft data issue: me

TIP: Hierarchy Health Quick Check

In the Viva Insights Data Quality page, check the **Manager hierarchy snapshots** section. Key indicators:

- **Tree count** should be low (ideally = number of top-level leaders, e.g., 1–5 trees for a single-CEO organisation)
- **Largest tree size %** should be high (e.g., >90% means most employees are in one connected hierarchy)
- **Missing ManagerEmail count** should be 0 or near-zero
- **Unmatched ManagerEmail count** should be 0 (all referenced managers exist as employees in the dataset)

11. Data Privacy & Compliance

11.1 Privacy Thresholds

- **Default minimum group size:** 10 users
- **Configurable minimum:** 5 users (lowest allowed); **maximum:** configurable up to 100
- **Regional requirements:** Some jurisdictions (e.g., European Works Councils, German Betriebsrat) may require higher minimums (commonly 25+). Always consult your legal/compliance team before setting the threshold below any regulatory or contractual requirement.
- Data suppressed for groups below threshold
- No individual user behaviour visible in Viva Insights dashboards
- **Differential privacy:** Automatically applied — randomly adjusts individual observations so aggregated results protect privacy
- **Distribution masking:** Automatically hides results where "almost all" or "almost none" fit a profile

NOTE: Minimum Team Size vs. Minimum Group Size

Minimum team size (set in Manager Settings) determines which managers can see their team's data. Includes the manager in the count.

Minimum group size (set in Privacy Settings) is the smallest group shown in dashboards and Power BI reports for group comparisons.

Both minimum values must be ≥ 5 .

11.2 Exclusion Lists

- Removes users from Copilot Dashboard AND Viva Insights behaviour reports
- Also excludes M365 Copilot Chat (web) usage data
- Upload: CSV or Entra ID groups
- Processing: up to 5 days to apply, up to 3 days to remove

11.3 Data Residency

Viva Insights data residency follows the **Exchange Online mailbox location** for each user. This means:

- Collaboration signals (meetings, emails, chats) are processed and stored in the **same geographic region** as each user's Exchange Online mailbox

- Copilot activity data follows the same residency as the user’s M365 tenant
- Organizational data uploads are stored in the tenant’s primary data location
- **Australia:** If the tenant is provisioned in the Australia geography, data is stored in Microsoft’s Sydney and Melbourne data centres. Verify in Admin Center → Settings → Org settings → Organization profile → Data location.
- **EU:** If the tenant is in the EU Data Boundary, data stays within EU data centres
- **Multi-Geo:** For tenants with Multi-Geo, each user’s data follows their mailbox location

Reference: Viva Insights data residency | Microsoft 365 data locations

11.4 Privacy Audit Evidence

When an auditor requests proof that individual-level data was not exposed, gather the following evidence:

Evidence Item	Where to Find It
Minimum group size configuration	Viva Insights → Admin → Privacy settings
Differential privacy enabled	Enabled by default — no admin toggle (always on)
Distribution masking	Enabled by default
Exclusion list	Admin Center → Viva Insights → Unified exclusion list
Delegation audit log	Purview Compliance Portal → Audit → search for "AddDelegates" / "RemoveDeleg
VFAM policy list	Admin Center → Viva Insights → Turn Advanced Insights on or off
Dashboard access list	Admin Center → Viva Insights → Manage user access for Copilot Dashboard

Reference: Viva Insights privacy overview

11.5 GDPR and Regional Compliance

- Viva Insights designed with GDPR compliance in mind
- Users can opt out via their settings
- Organizational data uploads should follow customer data handling policies
- Consult customer legal/compliance team for specific regulatory requirements

11.5 Data Retention

Dashboard	Retention Period	Notes
Admin Center Reports	Up to 180 days (selectable)	No historical data beyond 180 days
Copilot Dashboard	28-day rolling window	Daily refresh; up to 6-day delay
Advanced Analytics (collaboration)	Up to 27 months	Initially 13 months, grows with weekly refreshes
Advanced Analytics (Copilot metrics)	Up to 13 months	Copilot-specific metrics only retain 13 months

12. Common Customer Questions (FAQ)

#	Question
1	Can managers see individual employee Copilot usage?
2	What happens if we drop below 50 licences?
3	Can we trial the Dashboard before licensing everyone?
4	Does the Dashboard track Copilot Chat (web) usage?
5	How often does the data refresh?
6	Can we see data by business unit or country?
7	Is a separate Viva Insights licence needed if we have Copilot?
8	Can employees opt out of being analysed?
9	How is the \$72/hour default calculated?
10	Can we use the Agent Dashboard without Copilot Dashboard?
11	Who needs licences — only leaders viewing dashboards, or also employees whose data we want to analyse?
12	We already have Department and Manager in Entra ID — why do we need to upload org data?
13	We uploaded org data and now our Department filter shows different values than Entra ID — can we go back?
14	We want broader productivity metrics (meeting time, focus time) not just Copilot reporting. Is that covered here?

Appendix A: Further Considerations

1. **50-License Threshold Timing:** Should licensing be expanded before deployment to unlock group-level analytics? The threshold requires at least 50 assigned Copilot licences *or* at least 50 assigned Viva Insights licences — the two counts are **independent and not summed** (a 30 Copilot + 20 Viva Insights mix does not qualify).
2. **Entra ID Hierarchy Completeness:** Is the directory populated correctly? Criteria analysed weekly. If not, manual access assignment or org data upload is needed.
3. **AI Administrator Role Assignment:** Has this role been assigned? Required for dashboard access management, privacy, and exclusion lists. AI Admins must add themselves to view.
4. **Manager Settings Enablement:** Has the Insights Admin toggled on "Grant managers scoped access"? Without this, no managers can see team-level data even if they are licensed.
5. **Organizational Data Upload:** Is HR data available? Without it, only tenant-level views. Attribute names must match exactly. Include EffectiveDate.
6. **Hourly Rate Customisation:** Default \$72/hour. Should be adjusted based on your organisation's loaded labour rate.
7. **Privacy Thresholds & Small Groups:** Default group size = 10. Small departments or pilot groups may see suppressed data. Consider when planning phased rollouts.
8. **Baseline Data for Before/After:** Needs 4 weeks pre-adoption data. If Copilot already deployed, comparison may not be possible.
9. **Compliance Exclusion Requirements:** Plan for 5-day processing time for exclusion list uploads.
10. **Delegation Policy:** Should delegation be allowed? If not, disable via `CopilotDashboardDelegation` VFAM policy.
11. **Agent Dashboard Scope:** If agents are being deployed, ensure company-level delegates are configured (not just group-level).
12. **Multi-Agency / Multi-BU Data Isolation:** If your organisation operates multiple independent agencies or business units within a single M365 tenant and requires that Agency A *cannot* see Agency B's Copilot usage data, the standard Copilot Dashboard does not provide hard data isolation. Senior leaders auto-identified via Entra ID hierarchy will see "Your company" data covering all agencies. The solution is a **partition-based architecture** using Viva Insights Advanced Analytics. Two paths are available: **(A)** Create partitions filtered by a custom `Agency` attribute in a CSV upload — best when agencies share one email domain or you need rich filtering. **(B)** Create partitions filtered by the system-generated `Domain` attribute — zero CSV required if each agency has a distinct email domain. Both paths require restricting the Copilot Dashboard to Central IT only. See the *Multi-Agency Isolation Architecture* reference document for the validated dual-path solution, implementation runbook, and VFAM lockdown steps.

13. **Copilot Agent Governance:** If deploying Copilot Studio agents and needs DLP policies, connector governance, agent sharing controls, or publishing approval workflows, these are managed through the **Power Platform Admin Center** — not through Viva Insights. See the **Copilot & Agent Governance** project for the full governance framework including tenant/environment/agent-level controls, DSPM for AI, and billing boundaries.
14. **Licence Lifecycle & Billing:** If you need to understand what happens to analytics data when licences are assigned, removed, or reassigned — or needs to manage Copilot Credits billing, Pay-As-You-Go metering, or multi-agency chargeback — see the *Copilot Lifecycle & Billing Playbook*.
15. **Broader Collaboration Analysis (Beyond Copilot):** If the you want meeting time, focus time, after-hours, wellbeing, or manager effectiveness metrics independent of Copilot, these use the same Viva Insights analyst workbench and org data but different templates and metrics. See the *Advanced Viva Insights Collaboration Analysis Guide*. The 4-week baseline window (item 8 above) is best captured using these collaboration templates.

Appendix B: Glossary

Term	Definition
AI Administrator	M365 admin role that manages Copilot Dashboard settings, access, exclusion lists, and pr
Assisted Hours	Estimated time saved via Copilot — composed of meeting summaries (actual duration), se
Assisted Value	Monetary value of Assisted Hours: Assisted Hours × configured hourly rate (default \$72/h
Auto-enablement	Automatic process granting senior leaders dashboard access based on Entra ID hierarchy.
Copilot Analytics Reports	Out-of-the-box reports in the Viva Insights web app providing targeted Copilot and collab
Delegated Access	Manually granted dashboard access. Max 75 delegates per person. No cascading.
Exclusion List	Users excluded from Copilot Dashboard and Viva Insights analytics. Uploaded via CSV or
Insights Administrator	Viva Insights role with access to org data upload, privacy settings, manager settings, and
Insights Analyst	Viva Insights role that can create/run queries and access advanced analysis.
Loaded Labour Rate	Fully-burdened employee cost per hour including salary, benefits, and overhead.
Minimum Group Size	Smallest group shown in dashboards/reports. Default 10, minimum 5. Protects individual p
Minimum Team Size	Determines which managers can see team data. Includes manager in count. Minimum 5.
Organizational Data	HR attributes uploaded to enable group-level filtering and segmentation.
Partition	Logical grouping of employees in Viva Insights. Analysts need partition access to query da
Rolling Window	Data retention approach showing only the most recent period. Copilot Dashboard uses 28
VFAM	Viva Feature Access Management — PowerShell/admin center controls for enabling/disabl

Quick-Start Cheat Sheet

One-Page Implementation Checklist

Tier 1 — Admin Center (Day 1)

- ❑ Verify Reports Reader role → `admin.microsoft.com`
- ❑ Navigate to Reports → Usage → Microsoft 365 Copilot
- ❑ Wait ~72 hours for data → export CSV to verify

Tier 2 — Copilot Dashboard (Day 1–7)

- ❑ Verify 50+ assigned Copilot/Viva Insights licences
- ❑ Verify Entra ID manager hierarchy is populated
- ❑ AI Admin: add self + users/groups to dashboard access → `admin.microsoft.com` → Viva → Viva Insights
- ❑ Insights Admin: enable Manager Settings → `analysis.insights.cloud.microsoft` → Manager Settings
- ❑ Upload org data CSV (PersonId, ManagerId, Organization + custom attributes)
- ❑ Configure minimum group size (default 10, min 5)
- ❑ Configure hourly rate for ROI (default \$72/h)
- ❑ Optional: create exclusion list, configure sentiment surveys
- ❑ Wait up to 7 days → verify all 4 dashboard pages

Tier 3 — Copilot Analytics Reports (Auto)

- ❑ No action needed — automatically available to Dashboard users
- ❑ Verify: `analysis.insights.cloud.microsoft` → Reports (left nav)

Tier 4 — Agent Dashboard (Day 7+)

- ☐ On by default — verify visibility in Viva Insights left nav
- ☐ Ensure delegates have "Your company" scope (not "Your group")
- ☐ If agents deployed, verify agent activity data populates

Tier 5 — Advanced Analytics (Week 2+)

- ☐ Assign Insights Analyst role → wait 1–2 hours
- ☐ Grant partition access
- ☐ Ensure org data uploaded and processed (from Tier 2)
- ☐ Install Power BI Desktop (June 2022+)
- ☐ Create Copilot Impact query in Viva Insights analyst experience
- ☐ Connect Power BI via OData feed → apply template
- ☐ Configure scheduled refresh for ongoing reporting

Key Wait Times

Admin Center data	~72 hours
-------------------	-----------

Dashboard initial data	Up to 7 days
------------------------	--------------

Manager settings change	1 hour
-------------------------	--------

Access changes	24 hours
----------------	----------

Min group size change	24 hours
-----------------------	----------

Org data upload	Up to 7 days
-----------------	--------------

Exclusion list apply	Up to 5 days
----------------------	--------------

Exclusion list remove	Up to 3 days
-----------------------	--------------
