How This Document Fits

This is a **Reference** guide. It consolidates frequently asked questions across all Copilot Analytics tiers. For setup, see the Admin Setup Guide. For issue resolution, see the Troubleshooting Guide.

Section	Purpose	Who Reads
Strategy	Decide what to implement	CIO, SA, Business Leaders
Setup	Configure and deploy	IT Admin, Insights Admin
Operate	Use dashboards and reports daily	Leaders, Analysts, Managers
Reference (you are here)	Look up details and fix issues	Everyone (as needed)

Licensing & Access

Q1. Can managers see individual employee Copilot usage?

No. All data is aggregated at group level and protected by minimum group size thresholds (default 10, minimum 5), differential privacy, and distribution masking. No individual user behaviour is ever visible in the dashboards.

Q2. What happens if we drop below 50 licences?

The core dashboard (Readiness, Adoption, and Impact pages with group-level metrics) remains available with as few as 1 Copilot licence. To keep the **advanced features** — Agent Dashboard, benchmarks, intelligent summaries, sentiment survey metrics, week/month trendlines, manager group-level views with delegation, and the “All” licence type view — you need at least **50 assigned Copilot licences** *or* at least **50 assigned Viva Insights licences**. These are **independent thresholds, not summed**: a mix of 30 Copilot + 20 Viva Insights does *not* qualify; you must hit 50 on one of the two counts.

Q3. Can we trial the Dashboard before licensing everyone?

Yes. The basic Copilot Dashboard is available to any M365/O365 tenant with Exchange Online — no paid Viva licence required. With even 1 assigned Copilot licence, you get the Readiness, Adoption, and Impact pages with group-level metrics. Advanced features (benchmarks, Agent Dashboard, sentiment, delegation) require 50+ Copilot or Viva Insights licences.

Q4. Does the Dashboard track Copilot Chat (web) usage?

For paid Copilot users: Yes. If Copilot Chat reporting is enabled in your tenant, there is a separate licence filter on the dashboard to switch between Microsoft 365 Copilot and Copilot Chat views — available with 1+ Copilot licences. **For free Copilot Chat users (E3/E5 without Copilot add-on): Yes, with limits.** The Copilot Dashboard includes a **Copilot Chat** licence filter that shows insights for active users of the free Copilot Chat app. Free users are *not* tracked by Viva Insights custom queries or Admin Center Copilot usage reports.

Q5. How often does the data refresh?

The Copilot Dashboard refreshes **daily**, showing a 28-day rolling window with up to a 6-day delay from the current date. Admin Center reports refresh approximately every **72 hours**. Newly licensed employees may take an additional 7 days before appearing.

Q6. Is a separate Viva Insights licence needed if we already have Microsoft 365 Copilot?

No. Every M365 Copilot licence automatically includes the Viva Insights service plan — covering personal insights, manager/leader insights, and advanced analysis. A separate Viva Insights purchase is only needed if you want to analyse employees who do *not* have Copilot licences.

Q7. Who needs licences — only leaders viewing dashboards, or also the employees whose data we want to analyse?

Both. Employees whose collaboration data you want to analyse must have a Viva Insights licence assigned (included with every Copilot licence). Leaders and managers viewing dashboards also need a Viva Insights licence to access the full Copilot Dashboard and organisation insights.

Organizational Data

Q8. Can we see data by business unit, department, or country?

Yes, but you must upload organizational data (a CSV file with attributes like Business Unit, Department, Country) to enable these filters. Without an org data upload, only the Entra ID “Department” field is available as a filter.

Q9. Do I need to manually prepare and upload a CSV if we use SAP SuccessFactors or Workday?

No. Microsoft provides native HRIS connectors for both SAP SuccessFactors and Workday (Workday limited to ≤100K users). These connectors pull employee data directly from your HRIS on a weekly or monthly schedule.

Q10. Can I automate monthly CSV uploads?

Yes — multiple options exist: (1) **HRIS connectors** (SAP SuccessFactors, Workday) auto-sync on a schedule. (2) **Azure Blob Storage connector** — drop a CSV into an Azure blob and it’s picked up automatically. (3) **API-based import** (preview) — push data via REST API. Microsoft provides sample code at github.com/microsoft/orgdata_apibasedimport.

Q11. We have Department in Entra — why do we still need to upload org data?

Entra ID only syncs **3 attributes** to Viva Insights: PersonId (UPN), ManagerId, and Organization (from the Department field). Extension attributes (`extensionAttribute1-15`), Company, Division, JobTitle, City, and Country are **not synced** — even if populated in Entra via AD Connect. To use these attributes in Viva Insights, upload them via CSV or configure an HRIS connector.

Q12. We uploaded org data and now filters show different values — can we revert?

Yes. You can use **parallel data ingestion** to restore Entra ID as the source for `ManagerId` and `Organization` while keeping custom CSV attributes. To remove all uploaded data entirely, use the “Replace

All data" option with a single dummy row, then re-enable Entra sync. See Microsoft Learn. Always validate data in a test upload before applying to production.

Q13. "View by: Group" shows only one person's name instead of sub-groups. How do I fix this?

The Group view uses the uploaded manager hierarchy. If most employees report directly to the top-level leader (flat hierarchy), the dashboard cannot split into sub-groups. **Fix:** Ensure intermediate managers (VPs, Directors) exist as rows in your data file with correct `ManagerEmail` chains. Every `ManagerEmail` value must match a `PersonEmail` in the same file.

Privacy

Q14. Can employees opt out of being analysed?

Users can opt out of Viva Insights **personal insights** via their settings. For advanced analysis and the Copilot Dashboard, the Insights Administrator can configure **exclusion lists** to remove specific users from aggregated insights.

Q15. Does Power BI bypass the minimum group size?

No. Power BI template reports from Viva Insights enforce the same minimum group size threshold as the Dashboard. The privacy control is applied at the data aggregation layer, not the UI layer.

Q16. How is the \$72/hour default for Copilot Assisted Value calculated?

The \$72/hour is based on data compiled by the U.S. Bureau of Labor Statistics as a broad estimate of loaded labour cost. **Customers should adjust this to their own loaded rate** for accurate ROI calculations. The rate can be changed in the Impact settings or via the Hours and Value calculator on the dashboard. Note: this rate is session-only and not persistent per current guidance.

General

Q17. Can we use the Agent Dashboard without the Copilot Dashboard?

Both are part of the Viva Insights web app. You cannot enable one without the other being available, but access to each can be controlled separately via Viva Feature Access Management (VFAM) policies.

Q18. We want broader productivity metrics (meeting time, focus time, after-hours). Is that covered here?

No — that is a separate Viva Insights workstream. Copilot Analytics covers Copilot-specific adoption, impact, and ROI. Broader productivity metrics use the same Viva Insights licence and analyst role but are configured through different queries and templates. See the Collaboration Analysis Guide for details.

Q19. What are intent patterns, and how do they appear in the Dashboard?

Intent patterns (public preview, April 2026) categorise Copilot Chat (work) prompts into four groups: **Ask and find** (questions and info retrieval), **Catch up** (summaries and recaps), **Draft and brainstorm** (content creation), and **Other**. These appear on the Adoption page and help you understand *how* people use Copilot, not just how much. Intent metrics are also available in Viva Insights custom person queries for deeper analysis.

Q20. Can I export data from the Copilot Dashboard?

Yes. The Dashboard now offers a CSV export of de-identified, weekly metrics covering the past 6 months. Select the **Export** button on the dashboard. The exported data matches what you see on screen — aggregated and de-identified. For user-level or custom-segmented exports, use Advanced Analytics (person queries in the Viva Insights analyst workbench).

Q21. Can we use Organizational Messages to boost Copilot adoption?

Yes. Organizational Messages (GA, April 2026) allow IT admins to send targeted Copilot adoption nudges via email, Teams, or Windows surfaces. The key feature is **usage-based targeting** — messages are sent based on actual Copilot usage behaviour (e.g., “never used” or “tried once”), not static group membership. Configure in M365 Admin Centre → Organizational messages. See the Admin Setup Guide for configuration steps.

Q22. Does Microsoft Purview DLP affect Copilot usage metrics?

Potentially. DLP policies can block prompts containing sensitive information types. Blocked prompts are **not counted** as Copilot actions in the Dashboard or Viva Insights. If a significant number of prompts are blocked by DLP, you may see lower-than-expected usage metrics. Coordinate with your Security team to understand what DLP policies are in place.
