Microsoft 365 Copilot Analytics

Frequently Asked Questions — For Customers & IT Administrators

Licensing & Access

Q1. Is a separate Viva Insights licence needed if we already have Microsoft 365 Copilot?

No. Every M365 Copilot licence automatically includes the Viva Insights service plan — covering personal insights, manager/leader insights, and advanced analysis. A separate Viva Insights purchase is only needed if you want to analyse employees who do *not* have Copilot licences.

Q2. Who needs licences — only leaders viewing dashboards, or also the employees whose data we want to analyse?

Both. Employees whose collaboration data you want to analyse must have a Viva Insights licence assigned (included with every Copilot licence). Leaders and managers viewing dashboards also need a Viva Insights licence to access the full Copilot Dashboard and organisation insights. Unlicensed employees who collaborate with licensed users appear as "other internal collaborators" in aggregate but are not directly measured.

Q3. What is the minimum number of licences needed for full dashboard features?

At least **50 assigned** Copilot or Viva Insights licences (or a combination) are required for group-level filtering, the full Adoption page, and the Impact page. Below 50, only the Readiness page and tenant-level metrics are available.

Q4. What happens if we drop below 50 licences?

The dashboard reverts to limited features (tenant-level only, Readiness page). Previously available group-level data is no longer shown.

Q5. Can we trial the Dashboard before licensing everyone?

Yes. The basic Copilot Dashboard is available to any M365/O365 tenant with Exchange Online — no paid Viva licence required. But full group filtering and the Impact page require the 50-licence threshold.

Privacy & Data Protection

Q6. Can managers see individual employee Copilot usage?

No. All data is aggregated at group level and protected by minimum group size thresholds (default 10, minimum 5), differential privacy, and distribution masking. No individual user behaviour is ever visible in the dashboards.

Q7. Can employees opt out of being analysed?

Users can opt out of Viva Insights personal insights via their settings. For advanced analysis and the Copilot Dashboard, the Insights Administrator can configure privacy settings and create exclusion lists to remove specific users from aggregated insights.

Q8. What is the minimum group size, and can we change it?

The minimum group size is the smallest number of people for which data will be displayed. Default is **10**; the lowest allowed setting is **5**. It can be configured by the AI Administrator or Insights Administrator. Groups smaller than this threshold will show "N/A" instead of data.

Data & Reporting

Q9. How often does the data refresh?

The Copilot Dashboard refreshes **daily**, showing a 28-day rolling window with up to a 6-day delay from the current date. Admin Center reports refresh approximately every 72 hours. Newly licensed employees may take an additional 7 days before appearing.

Q10. Can we see data by business unit, department, or country?

Yes, but you must upload organizational data (a CSV file with attributes like Business Unit, Department, Country) to enable these filters. Without an org data upload, only the Entra ID "Department" field is available as a filter. Custom attributes can also be added.

Q11. Does the Dashboard track Copilot Chat (web) usage?

Yes, if Copilot Chat reporting is enabled in your tenant and you have 50+ Copilot or Viva Insights licences. There is a separate licence filter on the dashboard to switch between Microsoft 365 Copilot and Copilot Chat views.

Q12. How is the $72/hour default for Copilot Assisted Value calculated?

The $72/hour is based on data compiled by the U.S. Bureau of Labor Statistics as a broad estimate of loaded labour cost. **Customers should adjust this to their own loaded rate** for accurate ROI calculations. The rate can be changed in the Impact settings or via the Hours and Value calculator on the dashboard.

Agent Dashboard

Q13. Can we use the Agent Dashboard without the Copilot Dashboard?

Both are part of the Viva Insights web app. You cannot enable one without the other being available, but access to each can be controlled separately via Viva Feature Access Management (VFAM) policies.

Q14. Why can my delegates see the Copilot Dashboard but not the Agent Dashboard?

Managers cannot access a team-level view in the Agent Dashboard. Delegates must be given **"Your company"** scope (not "Your group") to access the Agent Dashboard. Update their delegation scope in Viva Insights → Settings → Delegation.

Scope & Broader Productivity

Q15. We want broader productivity metrics (meeting time, focus time, after-hours) — not just Copilot reporting. Is that available?

Yes, but through a separate workstream. Copilot Analytics covers Copilot-specific adoption, impact, and ROI. Broader Viva Insights productivity metrics (meeting time, focus time, after-hours, collaboration networks) use the same Viva Insights licence and analyst role but are configured through the Advanced Analysis workbench with different queries and templates. The organizational data and privacy settings you configure for Copilot Analytics carry over to the broader Viva Insights analysis.
