

Microsoft 365 Copilot Analytics

Admin Setup Guide

Configure and deploy the current Copilot Analytics capability areas — step by step

Document Property	Value
Section	Setup
Audience	IT Admin, AI Admin, Insights Admin
Version	4.1
Published	April 2026
Last validated	2 October 2026

How This Document Fits

This is a **Setup** guide. It covers all configuration steps to get Copilot Analytics dashboards operational. Read the Executive Briefing first to decide which tiers to implement, then follow this guide to deploy them.

Section	Purpose	Who Reads
Strategy	Decide what to implement	CIO, SA, Business Leaders
Setup (you are here)	Configure and deploy	IT Admin, Insights Admin
Operate	Use dashboards and reports daily	Leaders, Analysts, Managers
Reference	Look up details and fix issues	Everyone (as needed)

Table of Contents

- 1. Global Admin Readiness Checklist
- 2. What Each Role Sees

- 3. Tier 1: Admin Centre Reports
- 4. Tier 2: Copilot Dashboard Enablement
- 5. Tier 3: Copilot Analytics Reports
- 6. Tier 4: Agent Dashboard
- 6B. Organizational Messages for Copilot Adoption
- 7. Tier 5: Advanced Analytics Setup
- 8. Processing Times Reference
- 9. What to Read Next

1. Global Admin Readiness Checklist

When a Global Admin is asked “*Is everything set up?*”, use this quick diagnostic. Each row can be verified in under 2 minutes.

#	Check	Where to Verify	Expected State
1	Qualifying service plans assigned	Admin Centre → Billing → Licenses → check Microsoft 365 Copilot , Microsoft Viva Insights , and assigned service plans	≥1 Copilot licence for core Dashboard features. For features using the 50-plan threshold, count assigned Viva Insights service plans, including the plan bundled with Copilot. Microsoft’s Environment Requirements article explicitly says 30 Copilot + 20 Viva Insights qualifies as 50; the Dashboard article separately says 50 Copilot or 50 Viva Insights. Verify service plans and feature presence in the tenant.
2	Insights Admin role assigned	Microsoft 365 admin center → Settings → Microsoft Viva → Viva Insights → Add-on Plan → Insights Admin	At least one user listed
3	Insights Analyst role assigned	Microsoft 365 admin center → Settings → Microsoft Viva → Viva Insights → Add-on Plan → Insights Analyst	Analyst user(s) listed

4	VFAM — Viva Insights web app ON	Microsoft 365 admin center → Settings → Microsoft Viva → Viva Insights → Turn Advanced Insights on or off	Viva Insights web app = On for Everyone (this toggle replaced the legacy “Copilot Dashboard” VFAM control and now governs dashboard access end-to-end)
5	VFAM — Advanced Analytics ON	Same screen as above	Copilot Advanced Analytics = On for Everyone
6	VFAM — Behavioural insights set deliberately	Viva feature access management in the Microsoft 365 admin center → Manage datasets in Viva Insights → Behavioral insights ; or PowerShell <code>FeatureId BehavioralInsights</code>	On only if behavioural analysis is in scope (Microsoft’s default is Off for new tenants); the Copilot Dashboard works with it Off
7	Org data uploaded	M365 Admin Centre → Microsoft 365 Organizational Data Service (formerly Organizational Data in Microsoft 365; post-migration) or Viva Insights web app → Admin → Organisational data (pre-migration)	Upload status shows “Complete” or “In use”
8	Partition configured & analyst assigned	Viva Insights web app (admin experience) → Settings → Partitions	Analyst listed on the intended partition; only a Global-partition analyst receives company-wide Dashboard access through analyst assignment
9	Cloud and preview support checked	Microsoft Learn supported-environments matrix, Message Center, and tenant UI	Every planned capability is supported in the tenant’s exact cloud and rollout wave

10	Diagnostic-data coverage recorded	Tenant diagnostic-data policy plus Dashboard Impact metrics	Optional diagnostic-data state is documented before Assisted Hours or Value is interpreted
----	-----------------------------------	---	--

If any row fails, follow the corresponding section in this guide: licences (Tier 2 Step 1), roles (Tier 5 Step 1), VFAM (Tier 2 Step 3), org data (Data Onboarding Guide), partitions (Tier 5 Step 2).

NOTE: Copilot Includes a Viva Insights Service Plan

Every M365 Copilot licence includes the **Viva Insights service plan at no additional cost**, so that assignment contributes to Viva Insights eligibility. It does not bypass capability-specific thresholds, roles, access scopes, data prerequisites, cloud limits, or preview gates. In particular, use the separate conservative prerequisite below for Agent Dashboard preview.

NOTE: Licence Thresholds

With **1+ Copilot licences**, the tenant gets core Readiness, Adoption, and Impact capabilities. Microsoft’s Dashboard licence table lists benchmarks, intelligent summaries, Pulse and Glint survey-based sentiment, week-level and month-level trendlines, the group-level view for managers, and delegation as features that are not included with 1–49 Copilot licences (Steps 4, 5 and 10 below depend on the 50–licence threshold). For features using the 50–plan threshold, Microsoft’s Environment requirements for Viva Insights (Last updated 12 May 2026) says to count assigned Viva Insights service plans, including the plan bundled with Copilot, and explicitly gives **30 Copilot + 20 Viva Insights = 50 qualifying service plans**. However, Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers (Last updated 29 September 2026) describes the Dashboard threshold as 50 Copilot or 50 Viva Insights licences. Do not assume mixed licensing fails: verify assigned service plans, allow processing time, and confirm the feature in the tenant. If the documented qualifying mix does not unlock it, check Message Center and raise Microsoft Support.

The **Agent Dashboard is a separate preview conflict**: use 50 assigned Microsoft 365 Copilot licences plus agent activity as the conservative prerequisite, even though the broader Dashboard article also lists a 50–Viva–Insights path.

Current Copilot Analytics Capability Map

Microsoft’s current model has six areas. The numbered tiers retained later in this page are **This guide’s implementation framework**, not Microsoft licensing or dependency tiers.

Official area	Setup owner	Operational purpose

Microsoft 365 admin center reports	Reports Reader / Microsoft 365 admin	Licensed Copilot and unlicensed Copilot Chat usage reporting; separate Agents, Copilot credits and Cowork usage reports
Microsoft Copilot Dashboard	AI Administrator plus access owners	Readiness, adoption, impact, and sentiment
Agent Dashboard (preview)	AI Administrator	Agent adoption and usage
Consumption Dashboard	Insights Administrator (analyst and manager access); viewers are Insights Analysts with global partition access, managers and Global Administrators	Copilot Credit and GitHub AI Credit consumption (including Cowork); reconcile with official billing records
Copilot Analytics reports	Dashboard access owners	Ready-to-use adoption and impact reports
Advanced Reporting	Insights Administrator and Insights Analyst	Custom queries, reports, and business-outcome analysis

Source: Copilot Analytics introduction (Last updated 1 July 2026) and How to use the Consumption Dashboard in Insights (Last updated 8 September 2026).

Supported Environment Gate

Environment	Safe planning position
Worldwide	Broadest feature availability, still subject to licence, role, preview, data, and tenant-rollout prerequisites.
GCC Moderate (GCC-M) and GCC High (GCC-H)	Varies by feature in GCC-M and GCC-H. No Agent Dashboard, Copilot metric export, Consumption Dashboard or Readiness page; of the Copilot Power BI templates, only Copilot business impact. Delegate access to dashboards is not available in GCC-M and is partial in GCC-H. API-based and Azure blob organizational-data imports are unavailable in both. See Microsoft’s Supported environments matrix.

DoD and other national or regional clouds

Not covered by the feature matrix. Plan-level support does not establish feature parity. Agent Dashboard is unavailable in national and regional clouds; validate every planned feature against the current matrix and tenant UI.

Source: Supported Microsoft 365 environments for Viva Insights features (Last updated 30 September 2026) and Connect to the Agent Dashboard (Last updated 2 September 2026). Before implementation and after service changes, check Message Center for rollout notices and Service Health for active incidents; the actual tenant UI is the final availability check.

2. What Each Role Sees

Roles are **independent and non-cumulative**. Assigning an administrative role does not silently add analysis or Dashboard viewing rights. Use least privilege and verify both the role and the separate access source.

Identity or access source	Administrative capability	Analysis capability	Dashboard scope
Global Administrator	Global Microsoft 365 administration; inherits Insights Administrator privileges	Not an Insights Analyst by role	Automatic company-wide access (in Privileged Identity Management tenants, add Global Administrators explicitly)
AI Administrator	Manage Dashboard access, applicable settings, exclusions, and feature controls	No query rights	No automatic view. Must be explicitly assigned access or qualify another way.
Insights Administrator	Manage Viva Insights data, privacy, manager settings, partitions, and analyst assignments	No analyst rights. Assign Insights Analyst separately.	No automatic view. Requires explicit Dashboard access or another qualifying source.
Insights Analyst on a non-Global partition	No admin rights	Queries only within the assigned partition	No company-wide Dashboard access from the analyst assignment
Insights Analyst on the Global partition	No admin rights	Queries within the Global partition	Company-wide Dashboard access
Qualified senior leader	No admin rights	No analyst rights	Automatic hierarchy-based access where eligibility and auto-enablement apply
Manager enabled through Manager Settings	No admin rights	No analyst rights	“Your group” for the eligible measured team; Agent Dashboard access for managers: Microsoft’s articles disagree (see Tier 4)

Explicitly assigned user	No admin rights unless separately assigned	No analyst rights unless separately assigned	Assigned scope, including company-wide access where granted
Eligible delegate	No admin rights	No analyst rights	Acts within the scope the delegator grants (Your group, Your company or Combined access); the Agent Dashboard requires Your company or Combined access

Sources: Roles in Viva Insights (Last updated 7 July 2026), Manage settings for the Microsoft Copilot Dashboard, Agent Dashboard, and Viva Insights web app (13 August 2026), Delegate access to the Copilot Dashboard, Agent Dashboard, and Copilot insights (Last updated 16 September 2026), and Configure manager settings (Last updated 23 July 2026).

WARNING: AI Administrator Self-Access

The AI Administrator role does **NOT** grant automatic access to view the Copilot Dashboard. AI Admins must explicitly add themselves via Microsoft 365 admin center → Settings → Microsoft Viva → Viva Insights → Manage access settings for Microsoft Copilot Dashboard. This is the most common point of confusion during implementations.

WARNING: Multi-Agency Tenants

If your tenant hosts **multiple independent agencies** that must not see each other's Copilot data, **do not follow the standard enablement steps below**. Auto CxO Identification and broad manager access grant dashboard access showing "Your company" data across all agencies. Instead, follow the Multi-Agency Setup Guide which prescribes a lockdown-first posture.

3. Tier 1: Admin Centre Reports

Estimated Time: 15–30 minutes (plus 72 hours for data population)

The M365 Admin Centre Copilot reports are built-in and require no additional configuration. They provide user-level licence utilisation and per-application usage data.

Step 1: Verify Admin Role (5 min)

- 1. Navigate to **Microsoft 365 Admin Centre**: <https://admin.microsoft.com>
- 2. Go to **Users → Active users → Select your account**
- 3. Click **Manage roles** and verify you have **Reports Reader** or higher
- 4. If not, request role assignment from Global Administrator

Role	Access Level	Can Export CSV?
Global Administrator	Full access to all reports and settings	Yes
Reports Reader	Full access to usage reports	Yes
AI Administrator	Listed by Microsoft as able to view usage reports	Verify in the tenant (not stated)
Usage Summary Reports Reader	Aggregate data only; no user-level details	No

Step 2: Access Reports → Usage → Microsoft 365 Copilot (5 min)

- 1. In Admin Centre, navigate to **Reports → Usage**
- 2. Under **Reports**, select **Microsoft Copilot**, then **Copilot**, and open the **Usage** tab
- 3. Click to open the Copilot usage report

Step 3: Configure Report Parameters (5 min)

1. Select timeframe: **7, 28, 90, or 180 days**
2. Review summary cards: Total assigned licences, Active users, Adoption rate
3. Scroll to per-application breakdown (Word, Excel, PowerPoint, Outlook, Teams)

Step 4: Export User-Level CSV Data (5 min)

1. Click **Export** in the top right corner
2. Select CSV format
3. Open downloaded file to verify user-level activity data

Success Criteria

- ☐ Can access Admin Centre → Reports → Usage → Microsoft 365 Copilot
- ☐ Summary cards display: Assigned licences count, Active users count, Adoption percentage
- ☐ Per-application breakdown shows usage across Word, Excel, PowerPoint, Outlook, Teams
- ☐ Can export CSV file with user-level activity data
- ☐ Data is no older than 72 hours (check report timestamp)

NOTE: Data Availability

Reports populate within approximately **72 hours** of user activity (the Microsoft Copilot usage report article says typically within 48 hours of the end of the activity day; the Copilot Dashboard FAQ says within 72 hours). If this is a new Copilot deployment, allow 3 business days before expecting data.

4. Tier 2: Copilot Dashboard Enablement

Estimated Time: 2–4 hours active configuration + up to 7 days for data processing

The Copilot Dashboard is part of the Viva Insights web app. It provides ROI metrics (Copilot Assisted Hours & Value), adoption trends, and sentiment tracking at group/department level.

Step 1: Verify Licence Threshold (10 min)

1. Navigate to <https://admin.microsoft.com>
2. Go to **Billing** → **Licenses**
3. Locate Microsoft 365 Copilot and note the **assigned** count (not purchased)
4. Confirm at least **1 Copilot licence** is assigned for core dashboard features (Readiness, Adoption, Impact)
5. For features using the 50-plan threshold, confirm **50 assigned Viva Insights service plans**, counting the service plan included with Copilot; a 30 Copilot + 20 Viva Insights mix qualifies under Environment Requirements. Because the Dashboard article uses conflicting wording, confirm availability in the tenant.
6. For Agent Dashboard preview, conservatively confirm **50+ assigned Microsoft 365 Copilot licences**, qualifying agent activity, Worldwide availability, and tenant rollout.

Step 2: Verify Entra ID Hierarchy (15 min)

1. Navigate to <https://entra.microsoft.com>
2. Go to **Users** → select several sample users across different levels
3. For each user, verify the **Manager** attribute is populated
4. If more than 20% of users lack a Manager attribute, work with your directory team to populate the hierarchy before proceeding
5. Note: Automatic CxO access criteria are analysed weekly by Microsoft

Step 3: Verify VFAM Policies Are Enabled (10 min)

Requires **AI Administrator** or **Global Administrator** role. Microsoft’s sources differ on who manages the Viva Insights web app control: the Manage settings article says the AI Administrator (and that Global Administrators can manage all settings), while the feature access management table lists Global admin. That table also lists Global admin for Advanced insights, Web App Delegation and Copilot Dashboard Auto Enablement.

- 1. Navigate to `https://admin.microsoft.com`
- 2. Go to **Settings → Microsoft Viva → Viva Insights**
- 3. Select the **Set up and management** tab
- 4. Under **Access management**, select **Turn Advanced Insights on or off**
- 5. Verify the following policies are in the **Required State**:

Policy	Required State	What Happens If Off
Viva Insights web app (replaces former “Copilot Dashboard” toggle)	On	The entire Viva Insights web app is disabled — no Copilot Dashboard, no Analytics Reports, no admin or analyst tools
Viva Insights Web App Delegation (FeatureId <code>CopilotDashboardDelegation</code>)	On	Users cannot delegate Copilot Dashboard or Agent Dashboard access
Behavioral insights (PowerShell FeatureId <code>BehavioralInsights</code>)	On only if behavioural analysis is in scope	Meeting, email, chat and call collaboration data is not used for analysis, so behavioural Power BI reports and meeting, cross-collaboration and external collaboration queries are unavailable. The Copilot Dashboard and Copilot-metric person queries still work. Microsoft’s default is Off for new tenants; allow about five days after enabling

Auto CxO Identification (Dashboard AutoEnablement)	On (recommended). Dashboard auto-enablement is managed with PowerShell at tenant level only . Microsoft states that user- and group-level policies aren't supported for this feature and won't take effect.	Senior leaders do not get automatic access — must be added manually
Copilot Advanced Analytics	On (if planning Tier 5)	Analysts cannot access the Advanced Analysis workbench
Agent Dashboard	On (default)	The Agent Dashboard is disabled. Both this control and the Viva Insights web app control must be on
Identification (Consumption Dashboard insights and exports; Copilot Dashboard and Agent Dashboard exports, listed as private preview, although Microsoft's Agent Dashboard export article says public preview)	Set deliberately; see Privacy Configuration	Outputs are de-identified by default. Identified outputs name employees and are governed by a dedicated policy that only a Global Administrator or AI Administrator can create. Microsoft's VFAM feature table does not yet list an Identification control by name, so confirm the control in the tenant

If any policy shows **Off** or is scoped to specific users instead of **Everyone**, verify whether this was intentional. If not, select the policy → edit → set to **On** for **Everyone** (or the appropriate scope).

IMPORTANT: This Is the #1 Cause of “Dashboard Not Working”

If a previous admin created a custom VFAM policy that restricts the Copilot Dashboard to specific users, new users added via the access management settings **will not be able to view the dashboard** unless they are also included in the VFAM policy. Always check this screen first when troubleshooting access issues.

Accidental VFAM disable — blast radius & recovery:

- If the policy is turned **Off**, **all users** (auto-identified leaders, manually added users, delegates) immediately lose dashboard access
- Delegates are **not** removed — their delegation records survive, but they can’t access the dashboard until the policy is re-enabled
- **Recovery:** Turn the policy back On for Everyone (or the required scope). Access takes **up to 24 hours** to propagate. No data is lost.
- **Prevention:** Restrict VFAM policy editing to Global Administrators only. Document which policies are enabled and why.

Step 4: Configure Dashboard Access — Who Should See It (20 min)

Requires **AI Administrator** or **Global Administrator** role.

There are three ways users get access to the Copilot Dashboard. Decide which apply:

Access Method	Who Gets Access	How to Configure
Automatic (Entra ID)	Senior leaders in top 3 org levels with significant reporting lines (tenants with 2,500+ users)	No action needed — happens automatically if Auto CxO Identification is ON. Refreshed weekly.
Manual (Admin-assigned)	Specific users or groups you choose — AI Admins, BU leaders, HR, analysts, etc.	Microsoft 365 admin center → Settings → Microsoft Viva → Viva Insights → Set up and management → Under Microsoft Copilot Dashboard , select Manage access settings for Microsoft Copilot Dashboard → Add users/groups
Delegated	People that existing dashboard users choose to share with (max 75 per person)	Configured by users themselves via Settings → Delegation in the Viva Insights web app. No admin action needed.

Recommended approach: Enable automatic access only for intended senior leaders, then explicitly add only users who need Dashboard viewing. Do not add AI Administrators or Insights Administrators merely because they administer the service. A Global-partition Insights Analyst already has company-wide Dashboard access; a non-Global analyst does not.

Step 5: Enable Manager Access to Team-Level Data (15 min)

Requires **Insights Administrator** or **AI Administrator** role.

1. Navigate to Viva Insights web app: <https://insights.cloud.microsoft>
2. Go to **Settings** → **Manager settings** in the Viva Insights admin experience
3. Toggle on **“Grant managers scoped access to Copilot insights”**
4. Optionally, toggle on **“Grant managers scoped access to Consumption insights”** (requires the Copilot insights setting; lets eligible managers see team-scoped Consumption Dashboard data and export it)
5. Set the **Minimum team size** (minimum 5; includes manager in count)
6. Choose which managers to enable:

Audience Option	Description
All managers	All measured managers meeting team size threshold
Select Active Directory group	Choose a specific Entra ID group of managers
Upload .csv file	List specific manager email addresses

7. Click **Save changes** (takes effect within 1 hour)

Alternative path via Admin Centre: Settings → Viva → Viva Insights → Set up and management → Under **Copilot Dashboard**, select **Turn Insights for Managers on or off** and **Assign group managers to Insights for Managers**.

Step 6: Upload Organisational Data (30–45 min)

Organisational data (department, function, location, agency) enables group-level filtering and advanced segmentation on the Copilot Dashboard and in Power BI reports.

See the **Data Onboarding Guide** for full details on upload methods, attribute mapping, and troubleshooting.

Step 7: Configure Minimum Group Size (10 min)

Default is 10; minimum allowed is 5. This controls the privacy threshold — metrics are not shown for groups smaller than this value.

For tenants **WITHOUT** Viva Insights licence:

1. <https://admin.microsoft.com> → Settings → Microsoft Viva → Viva Insights
2. Under **Copilot Dashboard**, select **Manage minimum group size**
3. Enter preferred minimum (≥ 5) → Save (takes effect in 24 hours)

For tenants **WITH** Viva Insights licence:

1. <https://insights.cloud.microsoft> → Admin → Privacy settings
2. Configure minimum group size → Save (takes effect in 24 hours)

Step 8: Create Exclusion List (Optional, 20 min)

Requires **AI Administrator** role. Hides specific users from the aggregated insights in the Copilot Dashboard, Agent Dashboard, Consumption Dashboard and Viva Insights collaboration reports.

1. <https://admin.microsoft.com> → Settings → Microsoft Viva → Viva Insights
2. Select **Unified exclusion list**
3. Choose method: CSV upload (PersonId column), Entra ID groups, or Replace all
4. Microsoft states: “After you remove users with an exclusion list, it will take up to three days for the changes to take effect.” Verify the resulting membership and report behaviour in the tenant after that window.

NOTE: Exclusion List Scope

The exclusion list removes users from displayed Copilot Dashboard and Viva Insights collaboration insights as documented for the configured feature. It also applies to supported Copilot Chat usage data. Verify the exact exclusion effect in the current tenant and do not describe it as universal non-processing.

Step 9: Configure Hourly Rate for ROI (10 min)

1. Navigate to the **Impact page** on the Copilot Dashboard
2. Select **Hours and Value calculator**, then select **Value calculator**
3. Default hourly rate is **\$72/hour** (USD, based on U.S. Bureau of Labor Statistics)
4. Adjust to your loaded labour rate and select the appropriate currency
5. Document the rate used for future reference

How to calculate a loaded labour rate: (Average base salary + benefits + overheads) ÷ annual productive hours (typically ~1,880).

WARNING: Hourly Rate Is Session-Only

As of March 2026, changes to the hourly rate and currency are **not saved persistently**. You must re-enter your preferred rate **every time you reopen the Copilot Dashboard**. This is a current platform limitation — the settings reset on page reload. Agree on the rate with stakeholders and document it so it can be consistently re-applied.

Step 10: Sentiment & Survey Configuration (30–60 min)

Usage metrics tell you **how much** Copilot is used. Sentiment tells you **how employees feel about it**. The Copilot Dashboard's Impact page includes two distinct sentiment signals:

- **Satisfaction Rate** (automatic) — Thumbs-up/down reactions to Copilot responses across M365 apps. No setup needed. Shows as a 28-day rolling metric.
- **Sentiment section** (requires survey data) — Employee responses to Microsoft's four recommended questions, compared against Microsoft's benchmark.

Choose Your Sentiment Data Source

Option	Best For	Licence Required	Filters & Heat Maps?	Manager Team View?	Setup Effort
A: Viva Glint	Organisations with Viva Glint already deployed	Viva Glint (part of Viva Suite or standalone)	Yes — full group filters + heat maps	Yes	Medium
B: Viva Pulse	Quick, lightweight surveys from the Dashboard	Viva Pulse (included with M365 Copilot licence)	Yes — with Viva Insights subscription	Yes	Low
C: CSV Upload	Third-party survey tools (Qualtrics, SurveyMonkey, etc.)	Viva Insights subscription	Yes — with org data uploaded	Yes	Medium
D: Aggregated Upload	Organisations without Viva Insights wanting a simple summary	None (Global Admin only)	No — tenant-level summary only	No	Low

Microsoft's Four Recommended Copilot Survey Questions

All survey options use the same four questions. Include these **verbatim** to enable comparison with Microsoft's global benchmarks. Respondents answer on a 5-point Likert scale (Strongly Disagree → Strongly Agree).

Question #	Statement (use verbatim)
1	<i>Using Copilot helps improve the quality of my work or output</i>
2	<i>Using Copilot helps me spend less mental effort on mundane or repetitive tasks</i>
3	<i>Using Copilot allows me to complete tasks faster</i>
4	<i>When using Copilot I am more productive</i>

Option A: Viva Glint

1. In the Viva Glint admin portal, create a new survey program using the **Microsoft Copilot Impact Survey** template.
2. The template includes the four recommended questions pre-configured.
3. Set the survey audience (all Copilot-licenced users, or specific groups).
4. Set the survey cadence — Microsoft recommends recurring deployment to track trends.
5. Launch the survey. Results flow automatically to the Dashboard's Sentiment section.

Option B: Viva Pulse

1. In the Copilot Dashboard, navigate to the **Impact** page.
2. Scroll to the **Sentiment** section.
3. Select **Start new Pulse survey**.
4. The Copilot Impact template opens with the four questions pre-loaded.
5. Customise audience and add optional extra questions → Send.
6. Results automatically appear in the Dashboard Sentiment section once responses are collected.

Option C: CSV Upload

1. Run your Copilot survey using any tool. Include the four recommended questions using the exact wording above.
2. Export results and convert to a 100-point scale: Strongly Disagree=0, Disagree=25, Neutral=50, Agree=75, Strongly Agree=100.
3. Format the CSV with columns: `User AAD ID/Email address` , `Question 1` , `Question 2` , `Question 3` , `Question 4` . Leave cells blank for unanswered questions.
4. Navigate to `insights.cloud.microsoft` → **Survey data** → **Data connections** → **Manage data sources**.
5. Under **Microsoft Copilot Impact Survey data upload**, select **Start**.

6. Enter optional survey name and date range → browse to CSV → **Upload**.

7. Results appear in the Dashboard Sentiment section within **2 days**.

Option D: Aggregated Results (Admin Centre)

1. Run your Copilot survey and compute the **% of users who Agreed or Strongly Agreed** with each question.

2. Navigate to `admin.microsoft.com` → **Reports** → **Adoption Score**.

3. Select **AI adoption score** → **View details**.

4. Under **Assess Copilot sentiment for your org**, select **Record survey results**.

5. Enter the aggregated percentages for each question → Save.

Priority Rule: If You Upload Both

If you upload survey data via both CSV (.csv file) **and** aggregated results (Admin Centre), only the **CSV results** are shown on the Dashboard. The aggregated results only appear if you subsequently delete the CSV data.

Step 11: Wait for Data Processing

- **Initial data processing:** up to 7 days after licences assigned
- **Ongoing refresh:** daily, 28-day rolling window, ~6-day delay from current date
- **Newly licenced employees:** additional up to 7-day delay before inclusion

5. Tier 3: Copilot Analytics Reports

Copilot Analytics Reports are **out-of-the-box reports** that appear automatically in the Viva Insights web app once the Copilot Dashboard is operational. No additional setup is needed.

What you get: Ready-to-use reports that cannot be customised, currently the Copilot Studio agents report and the Copilot for Sales adoption report, plus reports that analysts share with leaders and managers. These are available to users who have Dashboard access (and to Insights Analysts with global partition access and Global Administrators).

What to verify:

- Users with Dashboard access can see the Analytics Reports section in the Viva Insights web app left navigation
- Reports reflect the same population as the Dashboard (same org data, same exclusion list)

NOTE: Same Prerequisites as Dashboard

Copilot Analytics Reports share all prerequisites with the Copilot Dashboard (Tier 2). If the Dashboard is working, Analytics Reports are automatically available. No separate setup is required.

6. Tier 4: Agent Dashboard

The Agent Dashboard is a **preview** capability for adoption and usage data from supported Copilot agents. Do not promise availability from a Viva Insights-only licence count. Microsoft now documents two views: the **Copilot Agent Dashboard** (public preview) and the **Agent 365 Dashboard** (all supported agents across Microsoft 365 apps; it also needs Agent 365 licensing, and the **All agents** toggle appears only when that is met). A separate VFAM control sets whether the Agent 365 view includes non-public agents.

Conflicting Microsoft prerequisite wording

Connect to the Agent Dashboard (Last updated 2 September 2026) and Copilot Analytics introduction (Last updated 1 July 2026) require at least **50 Microsoft Copilot licences** plus agent activity. The broader Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers (Last updated 29 September 2026) also lists a 50-Viva-Insights route. Use 50 Copilot licences plus agent activity as the conservative preview prerequisite. A Viva-Insights-only tenant must validate the feature in its UI, Message Center, and then Microsoft Support.

Agent Dashboard is unavailable in GCC and other national or regional clouds. Preview data can include agent names and activity detail; apply least privilege and privacy review before granting company-wide access.

What to verify:

1. Navigate to `https://insights.cloud.microsoft`
2. Confirm the **Agent Dashboard** section is visible in the left navigation
3. Confirm at least 50 Copilot licences, supported agent activity, company-wide access, Worldwide cloud, VFAM state, and tenant rollout
4. If still not visible, check Message Center and Service Health, then raise Microsoft Support with licence counts, cloud, activity dates, and screenshots

Delegated access note: Users who receive delegated access need **“Your company”** or **“Combined access”** scope to view Agent Dashboard data. “Your group” scope does not include Agent data. If the delegator has both company-level and group access, existing “Your company” delegates automatically become **Combined access** and might see the Consumption Dashboard. Microsoft’s articles disagree on that point: How to use the Consumption Dashboard says access can’t currently be delegated, while Delegate access describes a Combined access scope that includes the Consumption Dashboard. Test in the tenant before relying on either, and review existing delegates’ scopes.

IMPORTANT: Manager Access to Agent Data — Microsoft Sources Disagree

Microsoft's articles do not agree on whether managers can see agent data. Connect to the Agent Dashboard says enabled managers with team-level Copilot Analytics access can see agent insights scoped to their teams, and Delegate access lists manager-level access as a route to delegate the Agent Dashboard. Roles in Viva Insights lists automatic Agent Dashboard access only for Insights Analysts with global partition access, and Configure manager settings names the Copilot Dashboard, Copilot Analytics reports and Consumption Dashboard only. Treat manager access to agent data as unconfirmed and test with a pilot manager before relying on either position.

6B. Organizational Messages for Copilot Adoption

Organizational Messages allow IT admins to send **targeted adoption nudges** directly to users, encouraging Copilot usage based on their actual behaviour rather than static group membership.

What Are Organizational Messages?

Organizational Messages deliver short, contextual prompts to employees through multiple channels. Messages can promote Copilot features, share tips, or nudge inactive users to try specific capabilities.

Delivery Channels

Channel	Where It Appears	Best For
Email	User’s Outlook inbox	High-confidence reach; auditable; series campaigns for sustained adoption
Teams Popovers	In-context within Teams	Catching users where they already work; meeting and chat context
Windows Taskbar	Windows desktop notification area	Broad surface for daily desktop users
Windows Notifications	Windows notification centre	Less intrusive; visible when user checks notifications
Windows Spotlight	Lock screen and spotlight surface	Passive awareness; reaches users during transition moments

Usage-Based Targeting

The key capability for Copilot adoption is **usage-based targeting**, which uses dynamic, pre-defined usage segments to reach the right users:

Segment	Who It Targets	Recommended Message
Inactive Copilot users	Users with a Microsoft Copilot licence who have not used Copilot in the prior 28 days	Introduction, first-step guidance and role-specific prompts
Inactive Copilot users in Teams	Users with a Microsoft Copilot licence who have not used Copilot in Teams in the prior 30 days	Copilot in Teams meeting and chat tips

How to Configure

Prerequisites: authors need the **Organizational Messages Writer** role and approvers the **Organizational Messages Approver** role. Custom messages and advanced targeting (including Usage) need Microsoft 365 E3 or E5, Office 365 E3 or E5, or Windows Enterprise E3 or E5 in the tenant. Windows delivery needs supported Windows 11 devices that are Microsoft Entra joined or hybrid joined.

1. Navigate to `admin.microsoft.com` → **Reports** (select **Show all** if it is not listed) → **Organizational messages**, then select **Create a message**.
2. **Objective:** choose **Adoption**. **Location:** choose where the message appears (Windows Spotlight, taskbar, Notification Center, Microsoft Teams or email).
3. **Template:** choose a pre-made message or create your own (email is limited to eight pre-made templates).
4. **Recipients:** select **Usage** and one of the two predefined segments, or select Microsoft Entra groups. Usage targeting is not available for email, and Microsoft's article is inconsistent about Teams notifications (listed for Usage, but a note says Teams supports Entra groups only), so confirm in the tenant.
5. **Schedule:** set the start date, end date and how often the message reappears.
6. **Finish:** review, then schedule the message or send it for approval.

TIP: Pair with Dashboard Insights

Use the Copilot Dashboard Adoption page to identify groups with low adoption, then create targeted Organizational Messages for those groups. After sending, monitor the Dashboard to see if adoption improves — this creates a closed-loop adoption enablement workflow.

Analytics Connection

Organizational Messages do not appear in the Copilot Dashboard. To track how many people saw your messages and clicked them, use **Review activity** in Organizational messages in the Microsoft 365 admin center (messages seen, total clicks and clickthrough rate; email open tracking is being removed). To measure the *impact* of messages on adoption, compare Dashboard adoption trends before and after message campaigns.

7. Tier 5: Advanced Analytics Setup

Estimated Time: 4–8 hours active + query runtime + ongoing maintenance

Advanced Analytics enables custom Power BI reports using Viva Insights person queries. This is for analysts who need before/after adoption comparison, custom cohort segmentation, and historical data beyond the 28-day rolling window.

Step 1: Assign Insights Analyst Role (15 min + propagation time)

1. Identify the analyst(s) who will manage reports
2. In M365 Admin Centre: **Settings** → **Viva** → **Viva Insights** → **Add-on Plan** → **Insights Analyst**
3. Add users → Save
4. Allow time for permissions to propagate (typically 1–2 hours in practice; Microsoft does not document a figure)
5. Verify: analyst should see “Create analysis” button in Viva Insights web app left navigation

Step 2: Configure Partition Access (15 min)

A **partition** defines which employees an analyst can query. Most tenants have a default **Global** partition covering all employees.

To assign an analyst to an existing partition:

1. Navigate to <https://insights.cloud.microsoft>
2. Go to **Settings** → **Partitions** in the Viva Insights admin experience
3. Select **Global partition** (you can add and remove its analysts but cannot edit the partition itself). For another partition, select the ellipsis (...) under **Actions** → **Edit**
4. Pick the Insights Analyst by name or email, then complete the step (**Finish** when editing a partition)
5. The analyst can access this partition’s data once permissions propagate (typically 1–2 hours in practice)

NOTE: Global Partition = Dashboard Access

An Insights Analyst assigned to the **Global partition** automatically receives Copilot Dashboard access. This is a built-in shortcut — no separate dashboard access configuration is needed for global partition analysts.

Step 3: Upload Organisational Data

If not already completed in Tier 2 Step 6, upload org data now. Advanced Analytics segmentation (by department, function, location, agency) requires org data. See the **Data Onboarding Guide** for full instructions.

Step 4: Install Power BI Desktop

1. Download **Power BI Desktop** (version June 2022 or later)
2. Install on the analyst's workstation
3. Sign in with the same Microsoft 365 account that has the Insights Analyst role
4. Verify connectivity: in Viva Insights → Create analysis → select a template → choose "Connect to Power BI"

IMPORTANT: Insights Admin ≠ Insights Analyst

These are **two separate roles** with different capabilities:

Role	Can Configure Settings?	Can Create/Run Queries?	Can Upload Org Data?
Insights Admin	Yes	No	Yes (Viva Insights upload path only; Microsoft 365 admin center uploads need the Organizational Data Source Administrator role)
Insights Analyst	No	Yes	No
Both roles combined	Yes	Yes	Yes

If a user opens the Viva Insights web app and sees the Admin panel but no "Create analysis" button, they have the Insights Admin role only. The "Create analysis" button only appears for users with the Insights Analyst role. If one person needs to do both, assign **both** roles.

8. Processing Times Reference

Configuration Change	Processing Time
Admin Centre report data population	~72 hours after first usage
Initial Copilot Dashboard data population	Up to 7 days after licences assigned
Ongoing dashboard refresh	Daily (~6-day delay from current date)
User/group access changes	24 hours
Manager settings changes	1 hour
Organisational data upload processing	A few hours to 3 days for the profile store (Microsoft 365 admin center path); up to 7 days for dashboard use
Minimum group size change	24 hours
Exclusion list changes	Up to 3 days (Microsoft); verify in tenant
Insights Analyst role propagation	Typically 1–2 hours in practice (Microsoft does not document a figure)
Partition analyst assignment	Typically 1–2 hours in practice (Microsoft does not document a figure)
Survey CSV data to Dashboard	Up to 2 days
Newly licenced employees appearing in data	Up to 7 days

9. What to Read Next

Document	When to Read
Data Onboarding Guide	Full details on org data upload methods, attribute mapping, HRIS connectors, and CSV formatting
Privacy Configuration Guide	Detailed privacy settings, exclusion lists, minimum group sizes, compliance controls
Dashboard Guide	Understanding each dashboard page — what every metric means and how to interpret it
Analyst Playbook	Running queries, connecting Power BI templates, building custom reports
Multi-Agency Setup	If your tenant serves multiple agencies with separate analytics scoping
