

Microsoft 365 Copilot Analytics — Quick-Start Cheat Sheet

Implementation Checklist • Six Copilot Analytics Areas • Validated 2 October 2026

Admin Center Reports (Day 1)

- ❑ Verify the admin holds a role that can view usage reports (Microsoft names the AI Administrator role for the Copilot reports)
- ❑ Reports → Usage → Microsoft 365 Copilot
- ❑ Review licensed Copilot and unlicensed Copilot Chat reports separately
- ❑ Wait for report processing → export CSV if needed

Copilot Dashboard (Day 1–7)

- ❑ Core processing: 1+ Copilot or 50 assigned Viva Insights service plans
- ❑ 50-plan capabilities: count the Viva service plan included with Copilot; verify conflicting Learn wording in the tenant
- ❑ Verify Entra ID manager hierarchy populated
- ❑ AI Admin: add self + users to access
- ❑ Insights Admin or AI Admin: enable Manager Settings (toggle on "Grant managers scoped access to Copilot insights"; optionally also to Consumption insights)
- ❑ Use Microsoft 365 Organizational Data Service unless Message Center and tenant UI show another supported path
- ❑ Configure minimum group size (default 10, min 5)
- ❑ Enable optional diagnostics for comprehensive Assisted Hours inputs
- ❑ Document the \$72/h estimate and reapply custom rate/currency each session
- ❑ Optional: exclusion list, sentiment surveys
- ❑ Wait up to 7 days → verify Readiness, Adoption, Impact, scope, and filters

Copilot Analytics Reports

- ❑ No action — auto-available to Dashboard users
- ❑ Verify: Viva Insights → Reports (left nav)

Agent Dashboard (Preview)

- ❑ Conservative prerequisite: 50 Copilot licences + agent activity
- ❑ Not available in GCC/national-regional clouds
- ❑ Delegates need "Your company" or "Combined access" scope (not "Your group")
- ❑ Validate feature presence and preview data handling in the tenant

Advanced Reporting (Week 2+)

- ❑ Assign Insights Analyst role → allow time for access to propagate (verify in the tenant)
- ❑ Grant partition access
- ❑ Insights Admin and Insights Analyst roles are independent

- ❑ Install a current Power BI Desktop version
- ❑ Create Copilot Impact query
- ❑ Connect Power BI via OData feed → apply template
- ❑ Use Business Impact for outcome correlation; do not claim causation

Consumption Dashboard

- ❑ Global-partition analyst or Global Admin: company scope
- ❑ Enabled manager: group scope
- ❑ Delegation: Microsoft's articles disagree. The Consumption Dashboard article says access can't currently be delegated; Delegate access describes a Combined access scope that includes it. Test in the tenant before relying on either, and review existing delegates' scopes
- ❑ Current M365 service data: Cowork and Work IQ API
- ❑ Reconcile official charges in Microsoft 365 admin center/GitHub

Key URLs

M365 Admin Center	admin.microsoft.com
Entra Admin Center	entra.microsoft.com
Viva Insights	analysis.insights.cloud.microsoft
Copilot Dashboard	analysis.insights.cloud.microsoft
Power BI Desktop	powerbi.microsoft.com/desktop/

Key Wait Times

Action	Wait
Admin Center data	Typically 24–72 hours; can take several days
Dashboard initial data	Up to 7 days
Manager settings change	1 hour
Access changes	24 hours
Min group size change	24 hours
Org data upload	Up to 7 days
Exclusion list changes	Up to 3 days (Microsoft); verify in tenant

Org Data — Sources & Required Fields

Tenant-state gate: Microsoft pages conflict on legacy Viva upload availability. Check Message Center and the live tenant UI. Use Microsoft 365 Organizational Data Service for new/edited uploads unless the tenant explicitly shows another supported path.

Source	Status	Best For
CSV Upload (M365 Admin Center)	GA — Primary	Any HRIS. Incremental merge.
SAP SuccessFactors Connector	GA	SAP SF orgs. No CSV needed.
Workday Connector	GA	Workday orgs (≤100K users).
Azure Blob Storage	Preview / WW only	Automated CSV drop.
API-Based Import	Preview	Custom HRIS. Incremental refresh.
CSV Upload (Viva Insights)	Tenant/source conflict	Follow Message Center and live UI.

Legacy Name	M365 Admin Center Name	Req?
PersonId	Microsoft_PersonEmail	Yes
ManagerId	Microsoft_ManagerEmail	Yes
Organization	Microsoft_Organization	Yes
EffectiveDate	N/A (date picker)	No*
FunctionType	Microsoft_JobDiscipline	Opt.

* EffectiveDate not needed in Microsoft 365 admin center uploads — handled via UI date picker. It remains required only when the tenant UI and Message Center show that a legacy Viva Insights upload is still supported.

Roles Needed

Role	What They Do
Global Admin	Assign licences & roles
AI Admin	Dashboard access, Viva feature access management (VFAM), exclusion lists
Insights Admin	Privacy, partitions, manager settings; no analyst capability
Org Data Source Admin	Microsoft 365 Organizational Data Service imports
Insights Analyst	Queries, Power BI, advanced analysis

Common Gotcha: AI Admin does NOT get automatic dashboard access — must add self via access management settings.

Multi-agency: Partitions scope analyst queries. They are not tenant or cryptographic isolation. Test Dashboard, Agent, exports, delegates, managers, global roles, Power BI, and global partitions before go-live.

Suggested Review Cadence

Cadence	Who	What
Weekly	IT Admin	Licence utilisation, inactive users
Fortnightly	Leaders	Assisted Hours, adoption trends
Monthly	Leaders	Analytics Reports, agent data
Quarterly	Analysts	Before/after analysis, ROI deck
