

Microsoft 365 Copilot Analytics

Troubleshooting Guide

Consolidated issue resolution across the current Copilot Analytics capability areas

Document Property	Value
Section	Reference
Audience	All Roles
Version	4.2
Published	April 2026
Last validated	2 October 2026

How This Document Fits

This is a **Reference** guide. Use it to diagnose and resolve issues across the current Copilot Analytics capability areas. For setup instructions, see the Admin Setup Guide.

Section	Purpose	Who Reads
Strategy	Decide what to implement	CIO, SA, Business Leaders
Setup	Configure and deploy	IT Admin, Insights Admin
Operate	Use dashboards and reports daily	Leaders, Analysts, Managers
Reference (you are here)	Look up details and fix issues	Everyone (as needed)

Table of Contents

- 1. Admin Centre Reports
- 2. Copilot Dashboard
- 3. Agent Dashboard

4. Advanced Analytics (Power BI)

5. Data Upload Issues

6. Auditing Delegation

7. Escalation Path

Validate the service before changing the tenant

For a missing page, changed metric, failed export, or sudden data gap, first check Microsoft 365 admin center **Service Health** for active incidents and **Message Center** for rollout, preview, migration, or reporting changes. Record the notice ID, affected cloud, dates, and recovery window. Then confirm the feature is supported in the tenant's exact environment by using Supported Microsoft 365 environments for Viva Insights features (Last updated 30 September 2026). Plan support does not imply feature parity. Availability varies by feature in GCC Moderate (GCC-M) and GCC High (GCC-H): no Agent Dashboard, Copilot metric export, Consumption Dashboard or Readiness page; of the Copilot Power BI templates, only Copilot business impact. API-based and Azure organizational-data imports are also not available in either. The matrix does not cover DoD or other national or regional clouds.

1. Admin Centre Reports

Symptom	Cause	Resolution
No data displayed	Reports typically become available within 24 to 72 hours, but can take several days to populate after licence assignment.	Wait at least 72 hours after assigning Copilot licences; it can take several days. Verify licence assignment in <code>admin.microsoft.com</code> → Users → Active Users.
No Copilot licences visible	Licences not purchased or not assigned to users.	Check <code>admin.microsoft.com</code> → Billing → Licences. Purchase and assign Microsoft 365 Copilot licences to target users.
Can't export CSV from reports	User does not hold a role that can view usage reports.	Assign a least-privileged role from the "Before you begin" list of the Microsoft 365 admin center usage reports overview (for example Reports Reader). For the Copilot reports, Microsoft names the AI Administrator role. Usage Summary Reports Reader and User Experience Success Manager see no user details.
User details hidden / only aggregates visible	Concealed user details is enabled (privacy setting).	Navigate to <code>admin.microsoft.com</code> → Settings → Org Settings → Services tab → Reports, then uncheck "Conceal user, group, and site names in all reports." Only a Global Administrator can change this setting; it takes a few minutes to take effect, and showing identifiable user information is recorded in the Microsoft Purview audit log.
0 active users despite assigned licences	Users have not yet interacted with Copilot, or reporting has not caught up.	Verify users have actually used a Copilot feature (e.g., prompted Copilot in Word or Teams). Wait 72 hours for data to appear.

Cowork: For missing Cowork data, unexpected Cowork access, or a missing Value tab, use the troubleshooting table in Cowork Dashboard Operations.

2. Copilot Dashboard

Access denied / cannot open dashboard

The user lacks a qualifying Dashboard access source, is blocked by VFAM, lacks the required entitlement, or is affected by rollout/service state. AI Administrator and Insights Administrator roles alone do not grant a view.

1. Check Service Health, Message Center, supported environment, and tenant rollout.
2. Identify the access source: Global Administrator; qualified senior leader; explicitly assigned company-wide user; Insights Analyst on the Global partition; eligible delegate; or manager enabled through Manager Settings for "Your group." In a Privileged Identity Management (PIM) enabled tenant, Global Administrators might not have Dashboard access; add them explicitly.
3. If the user is an AI Administrator or Insights Administrator only, assign Dashboard access explicitly; do not add another privileged role merely for viewing.
4. Verify VFAM is enabled:
`admin.microsoft.com` → Viva → Feature Access Management → Viva Insights → the **Viva Insights web app** control must be ON for the user. The control turns the web app on or off at tenant, group or user level; turning it off disables the entire web app, including the Copilot Dashboard. Earlier Copilot Dashboard VFAM or PowerShell configurations now apply to the entire Viva Insights web app.
5. Confirm the required Viva Insights / Copilot entitlement and sign in again after propagation.

Impact page missing Copilot activity metrics	Optional diagnostic data is disabled, or data is still processing.	Confirm the approved diagnostic-data policy before changing it. Optional diagnostic data affects Assisted Hours, emails sent using Copilot, Teams meetings and meeting hours summarized or recapped, and Teams chats summarized; required diagnostics provide only a subset. If policy permits, enable the required setting and allow processing time. Source: Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers (Last updated 29 September 2026), Impact section.
Only Readiness page visible (no Adoption or Impact)	No Copilot licences assigned, or data processing not yet complete.	Assign at least 1 Copilot licence and wait up to 7 days for data processing. For capabilities using the 50-plan threshold, count assigned Viva Insights service plans, including the plan bundled with Copilot. Environment requirements for Viva Insights (Last updated 12 May 2026) explicitly says 30 Copilot + 20 Viva Insights qualifies as 50, while the Dashboard article says 50 Copilot or 50 Viva Insights. Verify the mixed deployment in the tenant. For Agent Dashboard preview, conservatively require 50 Copilot licences plus agent activity.
No group filtering available	Organisational data has not been uploaded.	Upload organisational data via CSV, HRIS connector, or another supported method. See the Data Onboarding Guide.

Impact page shows no data	Requires at least 7 days of usage data after licence assignment.	Wait at least 7 days after licences are assigned and users begin using Copilot. If data still doesn't appear, confirm the Viva Insights web app is enabled for the user in Viva Feature Access Management and check Service Health and Message Center. Behavioral insights do not affect the Copilot Dashboard.
Data suppressed / no value shown	Group is below the minimum group size threshold (default 10).	Ensure the group being viewed meets the minimum group size requirement. The minimum can be adjusted (lowest is 5) by the AI Administrator or Insights Administrator in Privacy Settings.
Managers can't see team data	Manager Settings are not enabled in Viva Insights.	Enable Manager Settings: <code>insights.cloud.microsoft</code> → Settings → Manager Settings → toggle ON. The manager's team must also meet the minimum team size threshold.
Sentiment section is empty	Survey data has not been uploaded for the organisation, or the minimum privacy threshold is not met.	Set up a Copilot Impact Survey in Viva Glint or a survey in Viva Pulse, or (as a Viva Insights admin) upload group-level survey results as a .csv file in the Viva Insights analyst experience (Survey data → Data connections → Manage data sources). Sentiment appears once responses meet the minimum group size.
Satisfaction rate card shows not enough feedback	Fewer than 30 feedback responses from at least five unique users in the rolling 28-day period.	No configuration fix is needed; the card appears once the threshold is met. Source: Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers.

Exclusion list not taking effect	The change is still within Microsoft’s stated window of up to three days, or the policy is not turned on.	Microsoft states: “After you remove users with an exclusion list, it will take up to three days for the changes to take effect.” Wait up to three days and verify the resulting membership and report behaviour in the tenant. Also confirm the unified exclusion list policy is turned on and the list was saved (created by an AI Administrator in Viva Feature Access Management). Source: Manage settings for the Microsoft Copilot Dashboard, Agent Dashboard, Consumption Dashboard, and Viva Insights web app.
----------------------------------	---	---

Org data not showing in filters	Wrong attribute names in uploaded CSV or missing EffectiveDate (legacy path).	• Verify attribute names match expected naming convention (legacy: PersonId , ManagerId ; new: Microsoft_PersonEmail , Microsoft_ManagerEmail) • For legacy path: ensure EffectiveDate column exists and date is earlier than upload date • Check the Data Quality page in Viva Insights for validation errors
---------------------------------	---	---

Copilot metrics export missing or disabled

The preview requires the documented 50-licence threshold, global / "Your company" access, feature enablement, supported cloud, and tenant rollout. Group-only access is insufficient; export is unavailable in GCC.

Verify each prerequisite, then check Message Center and Service Health. If available, remember the export is fixed and non-customizable: Week gives up to six months, Day gives 28 days, rows are anonymized user-level by default (personal identifiers are replaced with anonymised IDs; identifiable fields appear only where an administrator has enabled identifiable export for the user, a private-preview Identification capability), and Assisted Hours is absent. Source: Export Copilot metrics from the Microsoft Copilot Dashboard (Last updated 15 July 2026).

3. Agent Dashboard (Preview)

Symptom	Cause	Resolution
Agent Dashboard not visible	One or more preview prerequisites are missing: conservative 50-Copilot threshold, agent activity, company-level access for non-manager users, Worldwide cloud, feature enablement, or tenant rollout.	Confirm all prerequisites. Manager access is not settled by Microsoft's sources (the Agent Dashboard article says enabled managers can see agent insights scoped to their teams; the Roles in Viva Insights matrix lists no Manager access). "Your group" delegates cannot open it: delegates need "Your company" or "Combined access". The feature is not available in GCC-M or GCC-H, or in other national or regional clouds. Microsoft sources conflict on whether 50 Viva Insights alone qualifies; use 50 Copilot licences plus agent activity conservatively, then validate through Message Center and Microsoft Support. Source: Connect to the Agent Dashboard (Last updated 2 September 2026).
Agent Dashboard disabled	VFAM policy for AgentDashboard is set to OFF.	Check <code>admin.microsoft.com</code> → Viva → Feature Access Management → Viva Insights → verify "AgentDashboard" is enabled.
No agent data displayed	No agents have been deployed in the tenant, or agents have not been used.	Verify agents are deployed and users are interacting with them. Agent data requires active usage to populate.
"All agents" control missing (no Agent 365 Dashboard view)	The organisation does not have Agent 365 licensing in addition to the base prerequisite (50 Copilot licences plus agent activity).	Confirm Agent 365 licensing. If the All agents control is absent, the tenant does not meet the requirement. Agent 365 reporting starts only from the date the organisation accepted the Agent 365 terms of use, so earlier periods cannot be reported.

4. Advanced Analytics (Power BI)

Symptom	Cause	Resolution
Can't access analyst experience	User does not have the Insights Analyst role assigned.	Assign the Insights Analyst role and the intended partition. Insights Administrator is a separate, non-cumulative role and does not include analyst capabilities. If one person administers and analyzes, assign both roles. Source: Roles in Viva Insights (Last updated 7 July 2026).
Query returns no data	Analyst's partition does not include the target users.	Verify partition membership. The Insights Administrator can check and update partition assignments in <code>insights.cloud.microsoft</code> → Settings → Partitions.
Query fails with time period error	Selected time period exceeds available historical data.	Reduce the query time period to fall within available data. Viva Insights can retain up to 27 months of collaboration data and 13 months of Copilot metric data for Advanced Reporting; Dashboard calculation windows, preview export history, and admin-report periods are separate. Source: Microsoft Copilot impact report (Last updated 5 August 2026).
Power BI won't connect to Viva Insights	Authentication issue — incorrect account or expired token.	Sign in with the same account that has the Insights Analyst role. Clear cached credentials in Power BI Desktop: File → Options → Data Source Settings → Clear Permissions. Retry connection.
No segmentation available in PBI reports	Organisational data has not been uploaded or custom attributes are missing.	Upload organisational data with the attributes you need for segmentation. See the Attribute Reference.

Before/after analysis unavailable

No pre-adoption baseline data exists
— Copilot was deployed before Viva
Insights was configured.

Before/after comparisons require
data from both periods. If no pre-
adoption data was captured, use the
existing Impact page metrics as a
proxy or begin collecting a baseline
now for future comparison.

5. Data Upload Issues

Validation Failures

These errors occur before data is processed. The upload is rejected and no data is ingested.

Error	Cause	Resolution
Blank <code>PersonId</code> / <code>Microsoft_PersonEmail</code>	One or more rows have an empty email field.	Ensure every row has a valid email address in the <code>PersonId</code> (legacy Viva path) or <code>Microsoft_PersonEmail</code> column. Do not name a column <code>PersonEmail</code> : Microsoft's validation-errors article says <code>Microsoft_PersonEmail</code> is a reserved attribute.
Missing required attributes	CSV is missing one or more required columns: <code>PersonId</code> , <code>ManagerId</code> , <code>Organization</code> (legacy Viva path) or <code>Microsoft_PersonEmail</code> , <code>Microsoft_ManagerEmail</code> , <code>Microsoft_Organization</code> (Microsoft 365 admin center path).	Add the missing required columns to the CSV header row. See the Attribute Reference for the full mapping.
Empty rows in CSV	Blank rows (including trailing empty rows) cause validation to fail.	Remove all empty rows from the CSV. Pay special attention to rows at the end of the file.
Unlicensed apps referenced	CSV references applications or services not licensed in the tenant.	Remove or correct app references. Ensure all referenced services are active in the tenant.
Unsupported custom attributes	Custom attribute names contain spaces, special characters, or exceed 105 total attribute limit.	Use underscores instead of spaces. Remove special characters. Reduce total attribute count to ≤105.
<code>Microsoft_</code> prefix on custom attributes	Custom attributes must not use the <code>Microsoft_</code> prefix — this is reserved for system attributes.	Rename custom columns to remove the <code>Microsoft_</code> prefix. Use a plain name like <code>BusinessUnit</code> or <code>CostCentre</code> .

Processing Failures

Status	Meaning	Resolution
Processing failed (Viva Insights web-app import)	Backend error during data ingestion.	Retry the upload. If the issue persists, contact Microsoft Support with the error details and correlation ID.
Validation failed (Microsoft 365 Organizational Data Service)	An error occurred while validating your data; multiple types of data or mapping issues can trigger it.	Select Review details to download the import log, correct the issues, and re-import. Common triggers include blank rows under <code>Microsoft_PersonEmail</code> , missing required attributes, empty data rows, data for apps you are not licensed for, unsupported custom attributes, and attribute names that conflict with <code>Microsoft_</code> reserved names.
Validation on hold	A temporary API error.	No action is needed; it should resolve on its own within several minutes.
Canceled	The system terminated the run, perhaps because of a timeout or configuration changes. This does not indicate a data or file issue.	No action is needed. Select Review details to see whether a validation report is available. Manual .csv, API-based and Azure Blob Storage imports can be retried; Workday and SAP SuccessFactors connectors pull data again on their established refresh schedule.
Suspended	Something in the import process went wrong, or the system was unavailable. Microsoft states this is not a user error.	For manual .csv, API-based or Azure Blob Storage imports, wait a day and try the import again. For Workday and SAP SuccessFactors connectors, the next scheduled import might fix it. If suspended repeatedly, check service health at status.office.com.

Partial success

Some rows failed validation (API, Workday, or SAP connectors only).

Select **Review details** to download the import log, correct the failing rows, and re-import. Microsoft lists blank `Microsoft_PersonEmail` rows and data that does not match the expected data type as likely causes.

Validation Error Reference

For validation errors and warnings on imports through Microsoft 365 Organizational Data Service, see [How to fix validation errors and warnings when importing data](#). For uploads through the Viva Insights web app (delete and Replace All, or tenants not yet migrated), see [File rules and validation errors](#).

6. Auditing Delegation

Delegation changes are logged in **Microsoft Purview** audit logs. Use these operation names to track delegation activity:

Purview Operation	Description
AddDelegates	A delegate was added to the Copilot Dashboard or Viva Insights.
RemoveDelegates	A delegate was removed from the Copilot Dashboard or Viva Insights.

To view these logs: Microsoft Purview portal (`purview.microsoft.com`) → Solutions → Audit → Search → filter Activities by `AddDelegates` or `RemoveDelegates` .

7. Escalation Path

If the troubleshooting steps above do not resolve the issue, contact **Microsoft Support**:

1. Navigate to `admin.microsoft.com` → Support → New Service Request
 2. Select **Viva Insights** as the product
 3. Provide the following information:
 - **Tenant ID** (from `admin.microsoft.com` → Settings → Org Settings → Organization Profile)
 - **Licence counts** (total Copilot and Viva Insights licences assigned)
 - **Assigned service-plan counts**, exact cloud, and affected feature/preview
 - **Service Health and Message Center checks**, including notice IDs and dates
 - **Error messages** (screenshot or exact text, including correlation IDs if available)
 - **Steps already taken** from this troubleshooting guide
