

Microsoft 365 Copilot Analytics

Admin Setup Guide

Configure and deploy all five analytics tiers — step by step

Document Property	Value
Section	Setup
Audience	IT Admin, AI Admin, Insights Admin
Version	4.0
Published	April 2026

How This Document Fits

This is a **Setup** guide. It covers all configuration steps to get Copilot Analytics dashboards operational. Read the Executive Briefing first to decide which tiers to implement, then follow this guide to deploy them.

Section	Purpose	Who Reads
Strategy	Decide what to implement	CIO, SA, Business Leaders
Setup (you are here)	Configure and deploy	IT Admin, Insights Admin
Operate	Use dashboards and reports daily	Leaders, Analysts, Managers
Reference	Look up details and fix issues	Everyone (as needed)

Table of Contents

1. Global Admin Readiness Checklist
2. What Each Role Sees

3. Tier 1: Admin Centre Reports
4. Tier 2: Copilot Dashboard Enablement
5. Tier 3: Copilot Analytics Reports
6. Tier 4: Agent Dashboard
7. Organizational Messages for Copilot Adoption
8. Tier 5: Advanced Analytics Setup
9. Processing Times Reference
10. What to Read Next

1. Global Admin Readiness Checklist

When a Global Admin is asked “*Is everything set up?*”, use this quick diagnostic. Each row can be verified in under 2 minutes.

#	Check	Where to Verify
1	Copilot licences assigned	Admin Centre → Billing → Licenses → Microsoft 365 Copilot
2	Insights Admin role assigned	Admin Centre → Settings → Viva → Viva Insights → Admins
3	Insights Analyst role assigned	Admin Centre → Settings → Viva → Viva Insights → Add-on Plan → Insi
4	VFAM — Viva Insights web app ON	Admin Centre → Settings → Viva → Viva Insights → Turn Advanced Insi
5	VFAM — Advanced Analytics ON	Same screen as above
6	VFAM — Behavioural Experiences ON	Same screen as above
7	Org data uploaded	M365 Admin Centre → Organizational Data in Microsoft 365 (post-mig
8	Partition configured & analyst assigned	Viva Insights web app → Admin → Privacy settings → Partitions

If any row fails, follow the corresponding section in this guide: licences (Tier 2 Step 1), roles (Tier 5 Step 1), VFAM (Tier 2 Step 3), org data (Data Onboarding Guide), partitions (Tier 5 Step 2).

NOTE: Copilot Licence = Full Viva Insights Access

Every M365 Copilot licence includes the **Viva Insights service plan at no additional cost**. This covers all Viva Insights capabilities — including behavioural collaboration metrics, Copilot Dashboard, Copilot Analytics Reports, Agent Dashboard, and Advanced Analytics (Power BI). There is no separate “premium” tier to purchase if you already have Copilot licences.

NOTE: Licence Thresholds

With **1+ Copilot licences**, your tenant gets the Readiness, Adoption, and Impact pages with tenant-level and group-level metrics. To unlock advanced features — agent-related insights (Agent Dashboard), benchmarks, intelligent summaries, sentiment survey metrics, trendlines, manager group-level views with delegation, and the “All” licence type view — you need **at least 50 assigned Copilot licences or at least 50 assigned Viva Insights licences. The two thresholds are independent** — a mixed total such as 30 Copilot + 20 Viva Insights does *not* qualify; only one of the two counts must reach 50 on its own. (Per the MS Learn feature availability table.)

2. What Each Role Sees

Use this table to verify your role is working correctly. If what you see doesn't match, check role assignment in Admin Centre → Settings → Viva → Viva Insights.

Role	Left Nav You'll See
AI Administrator	Admin panel visible (General, Delegation, Manager settings, Privac
Insights Admin	Admin panel: Data quality, Data hub, Organisational data, Business
Insights Analyst	Analysis section: Publish reports, Create analysis, Analysis results,
AI Admin + Insights Admin	Full Admin panel (both sets of settings). No "Create analysis".
AI Admin + Insights Admin + Insights Analyst	Full Admin panel AND Analysis section with "Create analysis" butt

WARNING: AI Administrator Self-Access

The AI Administrator role does **NOT** grant automatic access to view the Copilot Dashboard. AI Admins must explicitly add themselves via Admin Centre → Settings → Viva → Viva Insights → Manage user access for Copilot Dashboard. This is the most common point of confusion during implementations.

WARNING: Multi-Agency Tenants

If your tenant hosts **multiple independent agencies** that must not see each other's Copilot data, **do not follow the standard enablement steps below**. Auto CxO Identification and broad manager access grant dashboard access showing "Your company" data across all agencies. Instead, follow the Multi-Agency Setup Guide which prescribes a lockdown-first posture.

3. Tier 1: Admin Centre Reports

Estimated Time: 15–30 minutes (plus 72 hours for data population)

The M365 Admin Centre Copilot reports are built-in and require no additional configuration. They provide user-level licence utilisation and per-application usage data.

Step 1: Verify Admin Role (5 min)

- 1. Navigate to **Microsoft 365 Admin Centre**: <https://admin.microsoft.com>
- 2. Go to **Users → Active users → Select your account**
- 3. Click **Manage roles** and verify you have **Reports Reader** or higher
- 4. If not, request role assignment from Global Administrator

Role	Access Level	Can Export CSV?
Global Administrator	Full access to all reports and settings	Yes
Reports Reader	Full access to usage reports	Yes
Usage Summary Reports Reader	Aggregate data only; no user-level details	No

Step 2: Access Reports → Usage → Microsoft 365 Copilot (5 min)

- 1. In Admin Centre, navigate to **Reports → Usage**
- 2. Scroll to find **Microsoft 365 Copilot** or use the search function
- 3. Click to open the Copilot usage report

Step 3: Configure Report Parameters (5 min)

- 1. Select timeframe: **7, 30, 90, or 180 days**
- 2. Review summary cards: Total assigned licences, Active users, Adoption rate
- 3. Scroll to per-application breakdown (Word, Excel, PowerPoint, Outlook, Teams)

Step 4: Export User-Level CSV Data (5 min)

1. Click **Export** in the top right corner
2. Select CSV format
3. Open downloaded file to verify user-level activity data

Success Criteria

- ☐ Can access Admin Centre → Reports → Usage → Microsoft 365 Copilot
- ☐ Summary cards display: Assigned licences count, Active users count, Adoption percentage
- ☐ Per-application breakdown shows usage across Word, Excel, PowerPoint, Outlook, Teams
- ☐ Can export CSV file with user-level activity data
- ☐ Data is no older than 72 hours (check report timestamp)

NOTE: Data Availability

Reports populate within approximately **72 hours** of user activity. If this is a new Copilot deployment, allow 3 business days before expecting data.

4. Tier 2: Copilot Dashboard Enablement

Estimated Time: 2–4 hours active configuration + up to 7 days for data processing

The Copilot Dashboard is part of the Viva Insights web app. It provides ROI metrics (Copilot Assisted Hours & Value), adoption trends, and sentiment tracking at group/department level.

Step 1: Verify Licence Threshold (10 min)

1. Navigate to <https://admin.microsoft.com>
2. Go to **Billing** → **Licenses**
3. Locate Microsoft 365 Copilot and note the **assigned** count (not purchased)
4. Confirm at least **1 Copilot licence** is assigned for core dashboard features (Readiness, Adoption, Impact)
5. For advanced features (benchmarks, Agent Dashboard, sentiment, delegation), confirm **50+ Copilot licences or 50+ Viva Insights licences** assigned — each threshold is independent, not summed

Step 2: Verify Entra ID Hierarchy (15 min)

1. Navigate to <https://entra.microsoft.com>
2. Go to **Users** → select several sample users across different levels
3. For each user, verify the **Manager** attribute is populated
4. If more than 20% of users lack a Manager attribute, work with your directory team to populate the hierarchy before proceeding
5. Note: Automatic CxO access criteria are analysed weekly by Microsoft

Step 3: Verify VFAM Policies Are Enabled (10 min)

Requires **AI Administrator** or **Global Administrator** role.

1. Navigate to `https://admin.microsoft.com`
2. Go to **Settings → Microsoft Viva → Viva Insights**
3. Select the **Set up and management** tab
4. Under **Access management**, select **Turn Advanced Insights on or off**
5. Verify the following policies are set to **On**:

Policy	Required State	What Happen
Viva Insights web app (replaces former “Copilot Dashboard” toggle)	On	The entire Viv
Copilot Dashboard Delegation	On	Users cannot
Behavioural Experiences	On	Collaboration
Auto CxO Identification (Dashboard AutoEnablement)	On (recommended)	Senior leader
Copilot Advanced Analytics	On (if planning Tier 5)	Analysts canr

If any policy shows **Off** or is scoped to specific users instead of **Everyone**, verify whether this was intentional. If not, select the policy → edit → set to **On** for **Everyone** (or the appropriate scope).

IMPORTANT: This Is the #1 Cause of “Dashboard Not Working”

If a previous admin created a custom VFAM policy that restricts the Copilot Dashboard to specific users, new users added via the access management settings **will not be able to view the dashboard** unless they are also included in the VFAM policy. Always check this screen first when troubleshooting access issues.

Accidental VFAM disable — blast radius & recovery:

- If the policy is turned **Off**, **all users** (auto-identified leaders, manually added users, delegates) immediately lose dashboard access
- Delegates are **not** removed — their delegation records survive, but they can’t access the dashboard until the policy is re-enabled
- **Recovery:** Turn the policy back On for Everyone (or the required scope). Access takes **up to 24 hours** to propagate. No data is lost.
- **Prevention:** Restrict VFAM policy editing to Global Administrators only. Document which policies are enabled and why.

Step 4: Configure Dashboard Access — Who Should See It (20 min)

Requires **AI Administrator** or **Global Administrator** role.

There are three ways users get access to the Copilot Dashboard. Decide which apply:

Access Method	Who Gets Access
Automatic (Entra ID)	Senior leaders in top 3 org levels with significant reporting lines (tenants with 2,5
Manual (Admin-assigned)	Specific users or groups you choose — AI Admins, BU leaders, HR, analysts, etc.
Delegated	People that existing dashboard users choose to share with (max 75 per person)

Recommended approach: Enable automatic access for senior leaders + manually add the AI Admin, Insights Admin, Insights Analyst, and any additional stakeholders (BU leaders, HR, change management leads).

Step 5: Enable Manager Access to Team-Level Data (15 min)

Requires **Insights Administrator** or **AI Administrator** role.

1. Navigate to Viva Insights web app: <https://insights.cloud.microsoft>
2. Go to **Manager Settings** (under Platform Setup on the left)
3. Toggle on **“Grant managers scoped access to Copilot insights”**
4. Set the **Minimum team size** (minimum 5; includes manager in count)
5. Choose which managers to enable:

Audience Option	Description
All managers	All measured managers meeting team size threshold
Select Active Directory group	Choose a specific Entra ID group of managers
Upload .csv file	List specific manager email addresses

6. Click **Save changes** (takes effect within 1 hour)

Alternative path via Admin Centre: Settings → Viva → Viva Insights → Set up and management → Under **Copilot Dashboard**, select **Turn Insights for Managers on or off** and **Assign group managers to Insights for Managers**.

Step 6: Upload Organisational Data (30–45 min)

Organisational data (department, function, location, agency) enables group-level filtering and advanced segmentation on the Copilot Dashboard and in Power BI reports.

See the **Data Onboarding Guide** for full details on upload methods, attribute mapping, and troubleshooting.

Step 7: Configure Minimum Group Size (10 min)

Default is 10; minimum allowed is 5. This controls the privacy threshold — groups smaller than this value will show “N/A” instead of data.

For tenants WITHOUT Viva Insights licence:

1. <https://admin.microsoft.com> → Settings → Microsoft Viva → Viva Insights
2. Under **Copilot Dashboard**, select **Manage minimum group size**
3. Enter preferred minimum (≥ 5) → Save (takes effect in 24 hours)

For tenants WITH Viva Insights licence:

1. <https://insights.cloud.microsoft> → Admin → Privacy settings
2. Configure minimum group size → Save (takes effect in 24 hours)

Step 8: Create Exclusion List (Optional, 20 min)

Requires **AI Administrator** role. Excludes specific users from all Copilot Dashboard and Viva Insights data.

1. <https://admin.microsoft.com> → Settings → Microsoft Viva → Viva Insights
2. Select **Unified exclusion list**
3. Choose method: CSV upload (PersonId column), Entra ID groups, or Replace all
4. Wait **up to 5 days** for exclusion to take effect

NOTE: Exclusion List Scope

The exclusion list removes users from both the Copilot Dashboard AND Viva Insights collaboration reports in Advanced Analysis. It also excludes M365 Copilot Chat (web) usage data.

Step 9: Configure Hourly Rate for ROI (10 min)

1. Navigate to the **Impact page** on the Copilot Dashboard
2. Select **Hours and Value calculator**, then select **Value calculator**
3. Default hourly rate is **\$72/hour** (USD, based on U.S. Bureau of Labor Statistics)
4. Adjust to your loaded labour rate and select the appropriate currency
5. Document the rate used for future reference

How to calculate a loaded labour rate: (Average base salary + benefits + overheads) ÷ annual productive hours (typically ~1,880).

WARNING: Hourly Rate Is Session-Only

As of March 2026, changes to the hourly rate and currency are **not saved persistently**. You must re-enter your preferred rate **every time you reopen the Copilot Dashboard**. This is a current platform limitation — the settings reset on page reload. Agree on the rate with stakeholders and document it so it can be consistently re-applied.

Step 10: Sentiment & Survey Configuration (30–60 min)

Usage metrics tell you **how much** Copilot is used. Sentiment tells you **how employees feel about it**. The Copilot Dashboard's Impact page includes two distinct sentiment signals:

- **Satisfaction Rate** (automatic) — Thumbs-up/down reactions to Copilot responses across M365 apps. No setup needed. Shows as a 28-day rolling metric.
- **Sentiment section** (requires survey data) — Employee responses to Microsoft's four recommended questions, compared against Microsoft's benchmark.

Choose Your Sentiment Data Source

Option	Best For	Licence Required
A: Viva Glint	Organisations with Viva Glint already deployed	Viva Glint (part of \
B: Viva Pulse	Quick, lightweight surveys from the Dashboard	Viva Pulse (include
C: CSV Upload	Third-party survey tools (Qualtrics, SurveyMonkey, etc.)	Viva Insights subsc
D: Aggregated Upload	Organisations without Viva Insights wanting a simple summary	None (Global Admi

Microsoft's Four Recommended Copilot Survey Questions

All survey options use the same four questions. Include these **verbatim** to enable comparison with Microsoft's global benchmarks. Respondents answer on a 5-point Likert scale (Strongly Disagree → Strongly Agree).

Question #	Statement (use verbatim)
1	<i>Using Copilot helps improve the quality of my work or output</i>
2	<i>Using Copilot helps me spend less mental effort on mundane or repetitive tasks</i>
3	<i>Using Copilot allows me to complete tasks faster</i>
4	<i>When using Copilot I am more productive</i>

Option A: Viva Glint

1. In the Viva Glint admin portal, create a new survey program using the **Microsoft Copilot Impact Survey** template.
2. The template includes the four recommended questions pre-configured.
3. Set the survey audience (all Copilot-licenced users, or specific groups).

4. Set the survey cadence — Microsoft recommends recurring deployment to track trends.
5. Launch the survey. Results flow automatically to the Dashboard's Sentiment section.

Option B: Viva Pulse

1. In the Copilot Dashboard, navigate to the **Impact** page.
2. Scroll to the **Sentiment** section.
3. Select **Start new Pulse survey**.
4. The Copilot Impact template opens with the four questions pre-loaded.
5. Customise audience and add optional extra questions → Send.
6. Results automatically appear in the Dashboard Sentiment section once responses are collected.

Option C: CSV Upload

1. Run your Copilot survey using any tool. Include the four recommended questions using the exact wording above.
2. Export results and convert to a 100-point scale: Strongly Disagree=0, Disagree=25, Neutral=50, Agree=75, Strongly Agree=100.
3. Format the CSV with columns: `User AAD ID/Email address`, `Question 1`, `Question 2`, `Question 3`, `Question 4`. Leave cells blank for unanswered questions.
4. Navigate to `insights.cloud.microsoft` → **Survey data** → **Data connections** → **Manage data sources**.
5. Under **M365 Copilot Impact Survey data upload**, select **Start**.
6. Enter optional survey name and date range → browse to CSV → **Upload**.
7. Results appear in the Dashboard Sentiment section within **2 days**.

Option D: Aggregated Results (Admin Centre)

1. Run your Copilot survey and compute the **% of users who Agreed or Strongly Agreed** with each question.
2. Navigate to `admin.microsoft.com` → **Reports** → **Adoption Score**.
3. Select **AI adoption score** → **View details**.
4. Under **Assess Copilot sentiment for your org**, select **Record survey results**.
5. Enter the aggregated percentages for each question → Save.

Priority Rule: If You Upload Both

If you upload survey data via both CSV (.csv file) **and** aggregated results (Admin Centre), only the **CSV results** are shown on the Dashboard. The aggregated results only appear if you subsequently delete the CSV data.

Step 11: Wait for Data Processing

- **Initial data processing:** up to 7 days after licences assigned
- **Ongoing refresh:** daily, 28-day rolling window, ~6-day delay from current date
- **Newly licenced employees:** additional up to 7-day delay before inclusion

5. Tier 3: Copilot Analytics Reports

Copilot Analytics Reports are **out-of-the-box reports** that appear automatically in the Viva Insights web app once the Copilot Dashboard is operational. No additional setup is needed.

What you get: Targeted reports providing deeper analysis than the Dashboard — including usage patterns by application, adoption trends by group, and focused impact reports. These are available to all users who have Dashboard access.

What to verify:

- Users with Dashboard access can see the Analytics Reports section in the Viva Insights web app left navigation
- Reports reflect the same population as the Dashboard (same org data, same exclusion list)

NOTE: Same Prerequisites as Dashboard

Copilot Analytics Reports share all prerequisites with the Copilot Dashboard (Tier 2). If the Dashboard is working, Analytics Reports are automatically available. No separate setup is required.

6. Tier 4: Agent Dashboard

The Agent Dashboard is **on by default** as part of the Viva Insights web app. It shows adoption and usage data for Copilot agents (Copilot Studio agents, custom agents, etc.).

What to verify:

1. Navigate to `https://insights.cloud.microsoft`
2. Confirm the **Agent Dashboard** section is visible in the left navigation
3. If not visible, verify that the Viva Insights web app VFAM policy is enabled (Tier 2 Step 3)

Delegated access note: Users who receive delegated access need **"Your company"** scope to view Agent Dashboard data. "Your group" scope does not include Agent data.

IMPORTANT: Team-Level Agent Data Not Available

The Agent Dashboard currently provides company-level and group-level data only. **Team-level (manager) views are not available** for agent usage data. Managers enabled via Manager Settings will see Copilot data for their team but not agent-specific breakdowns.

6B. Organizational Messages for Copilot Adoption

Organizational Messages allow IT admins to send **targeted adoption nudges** directly to users, encouraging Copilot usage based on their actual behaviour rather than static group membership.

What Are Organizational Messages?

Organizational Messages deliver short, contextual prompts to employees through multiple channels. Messages can promote Copilot features, share tips, or nudge inactive users to try specific capabilities.

Delivery Channels

Channel	Where It Appears	Best For
Email	User’s Outlook inbox	High-confidence reach; auditable; series campaigns
Teams Popovers	In-context within Teams	Catching users where they already work; meeting an
Windows Taskbar	Windows desktop notification area	Broad surface for daily desktop users
Windows Notifications	Windows notification centre	Less intrusive; visible when user checks notifications
Windows Spotlight	Lock screen and spotlight surface	Passive awareness; reaches users during transition r

Usage-Based Targeting

The key capability for Copilot adoption is **usage-based targeting**, which uses dynamic, pre-defined usage segments to reach the right users:

Segment	Who It Targets	Recommended Message
Never used	Licensed users who haven’t tried Copilot	Introduction and first-step guidance
Tried once	Users with minimal initial use	Tips for getting more value; specific feature sugges
Occasional users	Users who use Copilot sporadically	Workflow-specific prompts; “Did you know?” feature
Regular users	Active users with consistent patterns	Advanced features; power-user tips

How to Configure

1. Navigate to `admin.microsoft.com` → **Settings** → **Org settings** → **Organizational messages**.

2. Select **+ New message** and choose the **Copilot adoption** template (or create a custom message).
3. Under **Audience**, select **Usage-based targeting** to choose a product usage segment.
4. Select the **delivery channel** (email, Teams, Windows).
5. Set the **schedule** — one-time or recurring series.
6. Preview and **publish**.

TIP: Pair with Dashboard Insights

Use the Copilot Dashboard Adoption page to identify groups with low adoption, then create targeted Organizational Messages for those groups. After sending, monitor the Dashboard to see if adoption improves — this creates a closed-loop adoption enablement workflow.

Analytics Connection

Organizational Messages do not appear in the Copilot Dashboard. To track message delivery and open rates, use the Organizational Messages reporting within the M365 Admin Centre. To measure the *impact* of messages on adoption, compare Dashboard adoption trends before and after message campaigns.

7. Tier 5: Advanced Analytics Setup

Estimated Time: 4–8 hours active + query runtime + ongoing maintenance

Advanced Analytics enables custom Power BI reports using Viva Insights person queries. This is for analysts who need before/after adoption comparison, custom cohort segmentation, and historical data beyond the 28-day rolling window.

Step 1: Assign Insights Analyst Role (15 min + 1–2 hours propagation)

1. Identify the analyst(s) who will manage reports
2. In M365 Admin Centre: **Settings** → **Viva** → **Viva Insights** → **Add-on Plan** → **Insights Analyst**
3. Add users → Save
4. Wait **1–2 hours** for permissions to propagate
5. Verify: analyst should see “Create analysis” button in Viva Insights web app left navigation

Step 2: Configure Partition Access (15 min)

A **partition** defines which employees an analyst can query. Most tenants have a default **Global** partition covering all employees.

To assign an analyst to an existing partition:

1. Navigate to `https://insights.cloud.microsoft`
2. Go to **Admin** → **Privacy settings** → **Partitions**
3. Select the partition (usually **Global**) → click **Edit**
4. Under the **Analysts** tab, select **Add analysts**
5. Search for the Insights Analyst by name or email → select → **Save**
6. The analyst can access this partition's data within 1–2 hours

NOTE: Global Partition = Dashboard Access

An Insights Analyst assigned to the **Global partition** automatically receives Copilot Dashboard access. This is a built-in shortcut — no separate dashboard access configuration is needed for global partition analysts.

Step 3: Upload Organisational Data

If not already completed in Tier 2 Step 6, upload org data now. Advanced Analytics segmentation (by department, function, location, agency) requires org data. See the **Data Onboarding Guide** for full instructions.

Step 4: Install Power BI Desktop

1. Download **Power BI Desktop** (version June 2022 or later)
2. Install on the analyst's workstation
3. Sign in with the same Microsoft 365 account that has the Insights Analyst role
4. Verify connectivity: in Viva Insights → Create analysis → select a template → choose "Connect to Power BI"

IMPORTANT: Insights Admin ≠ Insights Analyst

These are **two separate roles** with different capabilities:

Role	Can Configure Settings?	Can Create/Run Queries?	Can Upload Org Data?
Insights Admin	Yes	No	Yes
Insights Analyst	No	Yes	No
Both roles combined	Yes	Yes	Yes

If a user opens the Viva Insights web app and sees the Admin panel but no "Create analysis" button, they have the Insights Admin role only. The "Create analysis" button only appears for users with the Insights Analyst role. If one person needs to do both, assign **both** roles.

8. Processing Times Reference

Configuration Change	Processing Time
Admin Centre report data population	~72 hours after first usage
Initial Copilot Dashboard data population	Up to 7 days after licences assigned
Ongoing dashboard refresh	Daily (~6-day delay from current date)
User/group access changes	24 hours
Manager settings changes	1 hour
Organisational data upload processing	Up to 7 days
Minimum group size change	24 hours
Exclusion list upload	Up to 5 days
Exclusion list removal	Up to 3 days
Insights Analyst role propagation	1–2 hours
Partition analyst assignment	1–2 hours
Survey CSV data to Dashboard	Up to 2 days
Newly licenced employees appearing in data	Up to 7 days

9. What to Read Next

Document	When to Read
Data Onboarding Guide	Full details on org data upload methods, attribute mapping, HRIS connectors, and C...
Privacy Configuration Guide	Detailed privacy settings, exclusion lists, minimum group sizes, compliance controls
Dashboard Guide	Understanding each dashboard page — what every metric means and how to interpr
Analyst Playbook	Running queries, connecting Power BI templates, building custom reports
Multi-Agency Setup	If your tenant serves multiple agencies with separate analytics scoping
