

Microsoft 365 Copilot Analytics

Dashboard & Reports Guide

Reading and using the Copilot Dashboard, Analytics Reports, and Agent Dashboard

Document Property	Value
Section	Operate
Audience	Business Leaders / Managers / Analysts
Version	4.0
Published	April 2026
Last validated	19 August 2026

How This Document Fits

This is a **Operate** guide. It covers how to *read* and *use* the Copilot Dashboard, Analytics Reports, and Agent Dashboard on a daily basis. It does **not** cover setup — see the Admin Setup Guide for configuration steps.

Section	Purpose	Who Reads
Strategy	Decide what to implement	CIO, SA, Business Leaders
Setup	Configure and deploy	IT Admin, Insights Admin
Operate (you are here)	Use dashboards and reports daily	Leaders, Analysts, Managers
Reference	Look up details and fix issues	Everyone (as needed)

Table of Contents

6. Suggested Review Cadence

7. What to Read Next

1. Copilot Dashboard Pages

The Copilot Dashboard is accessible at **insights.cloud.microsoft** and is divided into three main pages: **Readiness**, **Adoption**, and **Impact** (which includes a Sentiment section). Each page answers a different question about your organisation's Copilot deployment.

1.1 Readiness Page

The Readiness page answers: *"How many licences have we assigned, and is the count growing?"*

- **Licence assignment status** — current count of assigned vs available M365 Copilot licences.
- **Trend chart** — historical view of licence assignments over time, so you can spot stalled rollouts.

Feature Availability by Licence Count

Tenants with **1+ assigned Copilot licences** get core Readiness, Adoption, and Impact capabilities. For capabilities using the 50-plan threshold, Microsoft's Environment requirements for Viva Insights (Last updated 12 May 2026) explicitly counts the Viva Insights service plan included with Copilot and gives **30 Copilot + 20 Viva Insights = 50 qualifying service plans**. The newer, Dashboard-specific Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers (Last updated 18 August 2026) instead says 50 Copilot or 50 Viva Insights licences. Do not assume a mixed deployment fails: verify assigned service plans, feature presence, and processing in the tenant; escalate to Microsoft Support if the documented qualifying mix does not unlock the capability.

For **Agent Dashboard (preview)**, conservatively require 50 assigned Microsoft 365 Copilot licences plus qualifying agent activity. Microsoft's feature-specific Agent article conflicts with the broader Dashboard article on this prerequisite.

1.2 Adoption Page

The Adoption page answers: *"Who is using Copilot, how often, and in which apps?"*

Key Metrics

Metric	Definition
Active Copilot users	Number of licensed users who had at least one Copilot interaction in the 28-day measurement period.
Copilot Actions Taken	Total count of Copilot interactions across all users. Excludes agent interactions — those are tracked separately.
Usage Intensity	Average number of actions per active user (Actions Taken ÷ Active Users). Measures depth of engagement.
Consistent Usage	Users who were active in both the current and the previous 28-day period. Shows sustained adoption.
Internal Benchmark	Your own historical trend line — compare current period to your past performance.
External Benchmark	Anonymised comparison against similar-size organisations. Helps answer “Are we ahead or behind?”

Per-App Breakdown

The Adoption page breaks down usage across individual M365 applications:

App	What It Tracks
Teams	Meeting summaries, chat Copilot interactions, Teams Copilot actions
Outlook	Email drafting, summarisation, coaching suggestions
Word	Document drafting, rewriting, summarisation
PowerPoint	Slide generation, design suggestions, narrative creation
Excel	Formula generation, data analysis, chart creation
Copilot Chat	Current merged Copilot Chat usage metric across the supported Chat experience
Copilot Chat (web) — legacy	Historical transition series only; expect it to trend toward zero as activity moves into the new experience

License Filter: Microsoft 365 Copilot vs Copilot Chat

At the top of the Adoption page, a **License** filter lets you compare **Microsoft 365 Copilot**, **Copilot Chat**, and, where the 50-plan experience is available, **All**. The Copilot Chat view covers active users without the paid Microsoft 365 Copilot add-on when reporting is enabled.

Merged metric and legacy-web transition

Use **Copilot Chat** as the current reporting metric. Do not interpret a decline in the legacy **Copilot Chat (web)** series as declining adoption by itself; Microsoft is merging current activity into Copilot Chat, so the legacy series is expected to approach zero.

Source: Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers (Last updated 18 August 2026), Adoption section, and Export Copilot metrics from the Microsoft Copilot Dashboard (Last updated 15 July 2026), Metrics section.

Current admin reporting for unlicensed Copilot Chat

The Microsoft 365 admin center has a dedicated **Microsoft 365 Copilot Chat usage report** for users without a Microsoft 365 Copilot licence, with user activity and CSV export. This is separate from the paid-Copilot usage report, the Viva Dashboard view, Microsoft Graph’s licensed-user-only Copilot usage endpoint, and Purview audit evidence.

Source: Microsoft 365 Copilot Chat usage report (Last updated 10 July 2026) and Microsoft 365 Copilot reporting options for admins (Last updated 16 September 2025).

Intent Patterns (Preview)

The Adoption page includes **intent-based metrics** that categorise supported Copilot Chat prompts into common intent categories. These help you understand *how* people use Copilot, not just *how much*.

Intent Category	What It Captures	Example Prompts
Ask and find	Questions and information retrieval	“Find the recording of meeting X from May”, “Who
Catch up	Summaries, recaps, and action items	“Recap this meeting with key takeaways”, “Summ
Draft and brainstorm	Content generation and creative ideation	“Draft a status update email about project X”, “Br
Other	Prompts that don’t fit the above categories	General questions, casual interactions

Intent metrics are also available in **Viva Insights advanced reporting** for deeper analysis.

Expanded App Coverage

Beyond the core M365 apps listed above, the Dashboard also tracks Copilot usage in additional surfaces. Scenario-level breakdowns (e.g., suggested reply, translate, coach, clean data) are available for some apps:

App/Surface	Scenarios Tracked
Microsoft 365 Copilot App	Copilot Chat prompts and interactions
Edge	Copilot Chat interactions in the browser sidebar
OneNote	Summarise, organise, and create content from notes
Outlook	Suggested reply, translate, coach (in addition to draft/summarise)
PowerPoint	Translate, designer visuals, suggestions (in addition to create/summarise)
Excel	Clean data, Python in Excel (in addition to formula/analysis/format)

Intent Metrics Are in Public Preview

Intent-based metrics are rolling out in public preview as of April 2026. Availability may vary by tenant. These metrics will also be available in Viva Insights custom person queries once generally available, enabling analysts to correlate intent patterns with organisational attributes.

“View by” Options

The Adoption page can be sliced by different organisational dimensions. Each requires specific data to be present:

View By	What It Shows	Data Requirement
Group	Adoption by manager’s direct/indirect reports	Requires manager hierarchy (ManagerId in org data)
Job Function	Adoption by role category (Engineering, Sales, HR, etc.)	Requires FunctionType attribute in org data
Organization	Adoption by business unit or department	Requires Organization attribute in org data or
License type	Adoption by Microsoft 365 Copilot vs Copilot Chat	Copilot Chat filter requires tenant-level Copilc

“View by: Group” Shows Only One Person?

If a leader selects “View by: Group” and sees only themselves (or far fewer people than expected), the most common cause is **missing intermediate managers in the org data**. The manager hierarchy chain must include a row for every manager between the leader and their reports. Verify that your CSV (or Entra Manager field) has rows for every intermediate manager. Gaps break the chain and orphan the downstream employees from the leader’s view.

Scope Filter

Scope	What It Shows	Who Gets It
Your company	Entire eligible tenant population	Global Administrator; qualified senior leader
<Leader Name>	That leader’s reporting chain (direct + indirect reports)	Leaders with enabled Copilot Dashboard access
Your group	Your own eligible direct and indirect reports	Manager enabled through Manager Settings

Sources: Roles in Viva Insights (Last updated 7 July 2026), Delegate access to the Copilot Dashboard, Agent Dashboard, and Copilot insights (Last updated 9 February 2026), and Configure manager settings (Last updated 23 July 2026).

Suppressed Values (“--”)

When you see “--” instead of a number, it means the group size is below the **minimum group size** threshold (default: 10). This is a **privacy protection**, not an error. Data is present but suppressed to prevent identification of individuals. If you need to see data for smaller teams, an Insights Admin can adjust the minimum group size in privacy settings — but this should be done carefully with HR and legal approval.

Agent-Related Insight Cards on the Adoption Page (Preview)

In addition to the core Adoption insights (overview, usage intensity, returning users, per-app breakdown), the Adoption page now surfaces two **agent-focused insight cards** when your tenant has agent activity. These are independent of the Agent Dashboard itself and are visible to anyone who can already view the Adoption page.

Card	What It Shows
Agent adoption by Copilot users (preview)	The number of Copilot users who have used at least one agent, the number of agents used, and the number of agents used per user
Credit usage overview	Copilot Credits consumed by Copilot Chat users, the number of agents that have been used, and the number of agents used per user

Why these cards matter even before you open the Agent Dashboard

Both cards live on the regular Adoption page, so leaders who never opened the Agent Dashboard can still see *whether* agents are being used and *whether* they cost money. The **Agent adoption by Copilot users** card is the easiest way for a CIO to answer “are people actually trying our agents yet?”. The **Credit usage overview** card is the first place to spot a runaway PAYG bill before it shows up in the billing report. Click into either card to jump to the corresponding deep-dive view in the Agent Dashboard. Both cards are tagged as preview features — UI may shift before GA.

1.3 Impact Page

The Impact page answers: “What value is Copilot delivering?”

Check diagnostic coverage before interpreting impact

Optional diagnostic data affects **Copilot assisted hours, emails sent using Copilot, Teams meetings summarized or recapped, meeting hours summarized or recapped, and Teams chats summarized**. Required diagnostic data still provides a subset, so the metrics may populate while remaining materially undercounted. Record the tenant’s optional diagnostic-data policy and keep it stable across comparison periods.

Source: Connect to the Microsoft Copilot Dashboard for Microsoft 365 customers (Last updated 18 August 2026), Impact section.

Top-Level Metrics

Metric	Definition	How It’s Calculated
Copilot Actions Taken	Total Copilot interactions in the period	Direct count of all Copilot actions (same as Adopt
Copilot Assisted Hours	Estimated hours saved by Copilot	Meeting summaries + search/summaries valued a
Copilot Assisted Value	Dollar value of time saved	Assisted Hours × hourly rate (default \$72/hr). Hou
Satisfaction Rate	User satisfaction with Copilot responses	Thumbs up ÷ (thumbs up + thumbs down) reactio

Estimate, not causal proof

Assisted Hours and Assisted Value are modeled estimates using Microsoft’s assumptions and the hourly rate entered for the current session. They are not realized cash savings and do not establish that Copilot caused an outcome. For decision-grade analysis, document the assumptions, use a stable baseline and diagnostic-data policy, compare suitable cohorts or periods, and pair usage measures with independently governed business outcome data.

Current documented metric issue and incident validation

The current controlling Dashboard article documents the email issue below. A previously documented meeting issue is not present in that article as of 18 August 2026, so do not carry that older qualifier into a current report without a dated source.

Metric Category	Affected Period	Details
Email (Outlook Copilot)	June 1, 2025 – February 18, 2026	Generate email draft and Summarise email thread metrics u

Do not automatically attribute a dip to this issue. Check Microsoft 365 admin center **Service Health** for current incidents and **Message Center** for rollout or metric-change notices, then compare the incident dates, cloud, apps, and affected metrics with the observed pattern.

Export Copilot Metrics Safely (Preview)

The Copilot metrics export is a **preview** feature with a fixed, non-customizable schema. It exports anonymized **user-level** metric rows, not the aggregated chart currently visible on screen.

Prerequisites

- The tenant must meet the documented **50-licence** threshold. Because Microsoft pages conflict on mixed service-plan counting, verify assigned service plans and export availability in the tenant.
- The exporter must have **global / Your company access**. A manager or “Your group” delegate cannot export.
- The Copilot Metrics Export feature must be enabled for the user, and the capability must be available in the tenant’s cloud. It is not available in GCC.

How to Export

1. Open the Copilot Dashboard in the Viva Insights web app.
2. Select the Copilot metrics **Export** control.
3. Choose **Week** for weekly rows covering the past six months or **Day** for daily rows covering the past 28 days.
4. Download the CSV and record the export date, granularity, source article date, and tenant/cloud used.

What’s in the Export

Property	Correct interpretation
Grain and period	One anonymized user-level record per time interval: up to six months for Week, or 28 days for Day.
Identity	De-identified user identifiers are included. The export is therefore anonymized user-level data, not a
Customization	The schema and metric selection are not customizable, and Dashboard filters/groupings do not rede
Metrics	The documented export metrics are provided in the fixed schema. Copilot Assisted Hours is not in

Privacy Handling

- Treat the CSV as sensitive analytics data even though direct identities are removed; repeated user-level rows and joins with organizational data can increase re-identification risk.
- Store it in an access-controlled location, apply retention and sensitivity requirements, restrict downstream joins, and document every recipient and purpose.
- Do not present row-level data or attempt re-identification. Aggregate under approved minimum-group and privacy rules before wider distribution.
- Validate row counts, dates, granularity, metric definitions, missing values, and diagnostic-data coverage before publishing trends.

Export vs Advanced Analytics

The preview export provides a fixed anonymized user-level dataset. Use Advanced Reporting when an Insights Analyst needs governed metric selection, partition-scoped queries, or custom segmentation. Neither route removes the need for privacy review.

Source: Export Copilot metrics from the Microsoft Copilot Dashboard (Last updated 15 July 2026).

1.4 Sentiment Section

The Sentiment section lives **within the Impact page** and shows qualitative user feedback about Copilot.

Component	What It Shows	Notes
Sentiment results by question	Aggregated responses to Copilot experience questions	Includes benchmark co
Sentiment by group	Heat map showing sentiment across organisational groups	Viva Insights customer
Manager team view	Sentiment breakdown for a manager’s direct reports	Subject to minimum gro

No Survey Data?

If no Copilot survey has been deployed, the Sentiment section will show **“No survey responses available.”** This is expected. The **Satisfaction Rate** metric (thumbs up/down) works independently of surveys and will still display on the Impact page regardless of whether surveys have been configured.

2. How to Delegate Access

Dashboard access can be shared with others through delegation. This is how leaders give their managers or analysts visibility into Copilot usage for their scope.

Two Methods to Add Delegates

Method	Steps
Method 1: Settings	Dashboard → Settings (gear icon) → Delegation → Add → search for user → select scope → Save
Method 2: Share	Dashboard → Share button (top right) → Add → search for user → select scope → Save

Delegation Rules

Rule	Detail
Maximum delegates	75 per delegator
No cascading	Delegation does not flow downward. If Alice delegates to Bob, Bob cannot re-delegate to C
“Your group” scope	Delegate sees the delegator’s reporting chain only
“Your company” scope	Delegate sees the entire tenant — use sparingly
Agent Dashboard access	Requires “Your company” scope. “Your group” delegates cannot see the Agent Dashboard.
Delegator leaves org	All delegates immediately lose access. Recovery: another leader must re-delegate to those

Plan for Delegator Departures

If a key delegator (e.g., a VP or CIO) leaves the organisation, **all 75 delegates** could lose dashboard access simultaneously. Document who has delegated to whom and ensure at least two senior leaders have overlapping delegation lists for continuity.

3. Copilot Analytics Reports

Copilot Analytics Reports are pre-built reports available at **insights.cloud.microsoft → Reports**. They provide deeper analysis than the dashboard pages without requiring Power BI setup.

Report Types

Type	Examples	Description
Out-of-the-box	Copilot Studio Agents, Copilot for Sales Adoption	Pre-built by Microsoft. Available automatically o
Shared	Custom reports published by your analysts	Analysts with partition access can create querie

Access

- Anyone with **Dashboard access** (direct or delegated) can view reports.
- **Analysts** with a global partition can create and share reports.
- **Global Admins** have full access.

No additional setup is required beyond what is already configured for the Copilot Dashboard.

4. Advanced Power BI Templates

When the dashboard and built-in reports are not enough, Microsoft provides Power BI templates that connect directly to Viva Insights query data. Use the decision guide below to pick the right template.

Which Template Do I Need?

Question You're Asking	Recommended Template
"Is Copilot paying for itself?"	Copilot Impact
"Which teams are using Copilot?"	Copilot Adoption
"Quick executive talking points"	Copilot Headlines (preview)
"Did Copilot improve our business outcomes?"	Copilot Business Impact
"How do Copilot Studio agents perform?"	Copilot Studio Agents
"What do employees think about Copilot?"	Copilot Employee Experience (Glint)
"Standard reports are too high-level"	Custom Person Query

Template Reference

Template	Purpose
Copilot Impact	ROI analysis: Assisted Hours, Assisted Value, time savings by app
Copilot Adoption	Adoption trends, per-app usage, active user counts by group
Copilot Headlines	One-page executive summary with key metrics and trends
Copilot Business Impact	Before/after behavioural analysis: meeting time, focus time, email changes
Copilot Studio Agents	Agent usage, response quality, user engagement with custom agents
Copilot Employee Experience	Correlates Copilot usage with Glint survey sentiment and engagement scores
Custom Person Query	Fully custom analysis — select any combination of Copilot and collaboration metrics

5. Agent Dashboard

The Agent Dashboard provides visibility into supported Copilot Studio and declarative-agent activity for eligible users with “**Your company**” scope. Microsoft applies a public-preview label to this surface — see the preview-scope callout below, where the two governing articles disagree on how far that label reaches. Managers and “Your group” delegates do not receive Agent Dashboard access.

Two dashboard views — confirm which one a figure came from

The Agent Dashboard now contains **two distinct reporting views**, switched at the top right: **select All agents** for the **Agent 365 Dashboard**; **clear All agents** for the **Copilot Agent Dashboard**. Metrics and reporting history differ between them. Record which view was selected alongside any figure you export, and do not compare figures across views or blend them into one report without labelling the view.

View	Covers
Copilot Agent Dashboard	Agents used within Microsoft Copilot, plus associated Copilot Credit usage. Reports agent re
Agent 365 Dashboard	All supported agents used across Microsoft 365 apps. Reports sessions instead of agent res

Preview scope: the two Microsoft articles conflict. Connect to the Agent Dashboard (30 July 2026) narrows the preview label to the **Copilot Agent Dashboard view**. Manage settings for the Microsoft Copilot Dashboard, Agent Dashboard, and Viva Insights web app (13 August 2026) still states that the **Agent Dashboard** as a whole is for public preview customers only — and it carries the more recent date. **Do not resolve this conflict for a customer.** Treat the whole surface as preview for planning and commitments, cite the narrower scope only where the Agent Dashboard article is the governing source, and re-check both articles before repeating either statement.

Source: Connect to the Agent Dashboard (Last updated 30 July 2026).

Copilot Cowork data is moving out of the Agent Dashboard

Microsoft states that **Copilot Cowork usage data is transitioning out of the Agent Dashboard** into other Viva Insights reports, with interim reporting available in the Microsoft 365 admin center. Do not build a recurring Cowork report on the Agent Dashboard deep-dive pages; confirm the current surface before each reporting cycle. Note that the Consumption Dashboard separately reports Cowork *credit* usage, which is a different measure from agent adoption.

Source: Connect to the Agent Dashboard (Last updated 30 July 2026), agent deep dive pages.

Preview prerequisite conflict and cloud limits

Connect to the Agent Dashboard (Last updated 30 July 2026) and Copilot Analytics introduction (Last updated 9 February 2026) require at least **50 Microsoft Copilot licences** plus agent activity. The broader Dashboard article (Last updated 18 August 2026) also lists a 50-Viva-Insights route. Use 50 Copilot licences plus activity as the conservative prerequisite; validate a Viva-Insights-only tenant through its UI, Message Center, and Microsoft Support.

The Agent Dashboard is unavailable in GCC and other national or regional clouds. Preview behavior, metrics, filters, and data handling can change. Confirm current support in Supported Microsoft 365 environments for Viva Insights features (Last updated 30 June 2026) before using this procedure.

Key Metrics

View attribution: these metrics describe the **Copilot Agent Dashboard** view. In the **Agent 365 Dashboard** view, **agent responses** is replaced by **sessions**, and **Copilot Credits** is not shown — so any Credits-based analysis, including the pay-as-you-go cost-governance scenario below, applies to the Copilot Agent Dashboard view only. Label the view whenever you report these figures.

Metric	Definition
Active agents	Number of agents that received at least one user interaction in the period
Active users	Unique users who interacted with any agent
Agent responses	Total number of responses generated by agents
Returning users	Users who interacted with agents in both the current and previous period
% of Copilot users using agents	Agent active users ÷ total Copilot active users — shows agent penetration
Copilot Credits	Credits consumed by agent interactions (relevant for pay-as-you-go billing)

Unique Insights

Insight	What It Tells You
Most popular agent	Agent with the highest number of active users
Most versatile agent	Agent used across the widest variety of use cases or groups
Most shared agent	Agent shared with the most users or groups in the tenant

Filters

Filter	Options
Agent creator type	User, Your org, Microsoft, Partner
Agent source	Filter by where the agent was built or published

Three Practical Scenarios

Scenario 1: Post-Launch Adoption Review

Your organisation deployed three custom agents last month. Use the Agent Dashboard to answer:

- How many users actually tried each agent? (Active users per agent)
- Are people coming back? (Returning users)
- Which agent is getting the most traction? (Most popular agent)

Action: Double down on training for the popular agent; investigate why low-adoption agents are being ignored (discoverability? relevance?).

Scenario 2: Cost Governance for Pay-As-You-Go

Your tenant uses PAYG billing for agent interactions. Use the Agent Dashboard to answer:

- How many Copilot Credits are being consumed? (Credits metric)
- Which agents are the biggest consumers? (Sort by responses)
- Are partner-built agents driving unexpected costs? (Filter by creator type: Partner)

Action: Set credit alerts, review high-consumption agents with their owners, consider blocking non-essential agents.

Scenario 3: Shadow AI Detection

Users are creating their own agents without IT approval. Use the Agent Dashboard to answer:

- How many user-created agents exist? (Filter by creator type: User)
- Are any user-created agents being widely shared? (Most shared agent)
- Do any of these agents have external data connections that violate policy?

Action: Follow the Detect → Act workflow below.

Detect → Act Workflow

Stage	Tool	Action
Detect	Agent Dashboard	Identify agents that are unapproved, high-cost, or widely shared without g
Decide	Governance process	Evaluate the agent against your organisation's AI governance policy (data a
Act Quick	M365 Admin Centre	Immediate actions: Block (disable agent), Approve (whitelist), or Review (
Act Policy	Power Platform Admin Centre	Long-term controls: apply DLP policies to restrict connector access, enfo

6. Suggested Review Cadence

Operational validation before diagnosis

Before treating a missing page, changed metric, or sudden data dip as tenant misconfiguration, check Microsoft 365 admin center **Service Health** for incidents and **Message Center** for rollout, preview, or reporting changes. Record the notice ID and date alongside the report, then retest the affected surface after the published recovery or rollout window.

Frequency	Who	What to Review
Weekly	IT Admin	Licence utilisation, assignment trends
Fortnightly	Leaders / Managers	Assisted Hours, Assisted Value, adoption trends, Satisfaction Rate
Monthly	Leaders / Managers	Analytics Reports, agent adoption, new agent activity
Quarterly	Analysts + Executive Sponsor	Before/after behavioural analysis, ROI report, cross-group comparisons

7. What to Read Next

Document	When to Read It
Analyst Playbook	You need to run custom queries, connect Power BI templates, or build cross-group reports
Billing Operations	You need to manage licence costs, billing cycles, or PAYG credit governance
Troubleshooting Guide	Something isn't working — missing data, access issues, or unexpected behaviour
Admin Setup Guide	You need to go back and configure or reconfigure dashboard access, org data, or VFAM settin

Disclaimer: This document is provided for informational purposes only and was last validated on 19 August 2026. Microsoft may change features, interfaces, preview behavior, and availability without notice. Always verify current guidance on Microsoft Learn, Message Center, Service Health, and the tenant UI. This document is not official Microsoft documentation and should not be treated as a definitive source for product capabilities or licensing requirements.
